**Caller Remarks:**

AMONIA LEAK CAUSING 3 PERSONS TO BE INJURED–HAZMAT AND INDUSTRIAL WASTE ARE BEING NOTIFIED AT THIS TIME.

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

10/25/99 – Spoke with OEM Washington – spill is from two trucks outside plant property. Approx 100 gallons spilled into street and sewer system. Unknown at this time if trucks were making delivery to KeySpan. 3 people injured due to inhalation. A rep from OEM is on location. FDNY and NYPD also on location. (CAE)

On location with FDNY, NYPD, OEM, DEP. Spill of ammonia/citric acid occurred during mixture of two chemicals in tanker. Used for boiler cleaning. Tanker pressurized and blew open hatch. Spill is on KeySpan property. Miller Environmental Group was on-site at time of spill – cleaning by washing with water and vaccing up. Product delivery at NW corner of building. Some got into drain which enters facility discharge canal.

Acc'd to Dom DiGiorgio last delivery was in 1994. Gene Urso (Phillips Services Corp. – boiler cleaning contractor) reported that the reaction takes place by adding all of both reactants to tanker truck. The reaction is then controlled by controlling the

mixing rate. Tanker is on portable 2ndary containment, but spill extended beyond the 2ndary containment. Gene Urso checked tanker and reported about 50 gallons was lost. At the time of the incident, 3 Phillips employees were right next to truck and none were injured. During mixing the pressure is not monitored. The mixing rate is selected based on prior experience. DiGiorgio to meet with Phillips execs to get their procedures and mixing ratios. (CAE)

10/26/99 – Article in NEWSDAY reports that approx. 100 employees were evacuated from the plant during the incident.

2/12/2003 – Closed Due To The Nature / Extent Of The Spill Report

2/5/04: Spill closed without review of file which is maintained by Con Ed monitors. Re-opened by O'Connell.

BOWSER FOR 30 UNIT MAIN OIL RESEVOIR FAILED CAUSING SPILL – SPILL CONTAINED IN SUB BASEMENT / CLEAN UP CREW ENROUTE

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

Notes from Steve Saccacio:

The spilled oil entered the sump and was pumped to a settling tank. The settling tank led to an oil water separator. According to Dom Digiorgio, the designed separator clean water gravity feed into the discharge tunnel did not work. Instead ConEd used two external pumps to pump the water into the tunnel. After the spill, ConEd shut down the pumps and closed the separator effluent (gravity feed). According to ConEd, the separator had over flowed but no oil escaped. One of the external pump's hose was cut and checked for oil residue. It looked clean. Later, ConEd noticed that the level in the separator dropped. ConEd claimed that the separator effluent valve leaked. ConEd check the river out fall and verified that oil had escaped. ConEd estimated the escape at 5 gallons. They replaced the boom before my arrival. It appeared that with the 1,000,000 gal/min that the boom system would not prevent oil from escaping. ConEd requested permission to run emergency flood control pumps if necessary while the sump pump system was offline. The emergency flood control pumps empty directly into the river. Approval was given with the following conditions. 1) The each plant held it's own water and only when that plant's water level became critical, then that flood

control system would be activated. 2) The system is operated manually too lower the water to a safe level. The normal plant flow diagram is as follows:

Plant1 -> Plant2-> Plant3 (spill) -> Settling Tank -> Separator -> River

The separator was vacced and the settling tank is to be emptied into the separator. The oil in the basement is being swepted free of oil and then the separator is to be put back online.

There was also an equipment vault were some of the oil was trapped. This vault is watertight and must be emptied manually. ConEd said they would have that done on a non-emergency basis.

USCG (Tim Macon) was on scene.

Spill transferred to Engelhardt on 8/17/98.

## Caller Remarks:

CALLER NOT VERY COOPERATIVE WITH EXPLANATION – SAID OIL COOLER LEAKING

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead DEC Field was "ENGELHARDT"

MULQUEEN RESPONDED. OIL MIXED WITH RIVER WATER IN OIL COOLER. OIL COOLER COIL APPEARS TO HAVE RUPTURED. SPEDES DISCHARGE POINT FLOWING AT .5MG, AND RIVER RUNNING STRONG NORTH. S & D CHANGED OUT SORBENT BOOM AT MOUTH OF DISCHARGE. OIL COOLER TAKEN OFF LINE. AS OF 6:30 AM, NO SHEENING IS OBSERVED. USCG AND DEP ALSO RESPONDED DOMINICK DIGIORGIO ESTIMATED 320 GALLONS OF TURBINE OIL WENT OUT THROUGH THE OUTFALL.

3/26/98 phone conversation with plant environmental manager Dom Digiorgio:

320 gallons determined by determining leak rate and extrapolating over the time the cooler had been in service which was three weeks, so 320 is the maximum leaked over three week period. Difficult to do inventory check because lube system is manifolded to many tanks. Leak repaired. Cooler scheduled for replacement.

internal leak on cooler taken out of service – no sign of oil in river

---

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

11/12/97, 11:00AM – spoke with Mr. McKinley – over the past 24 hours, they noticed that the volume of lube oil in the cooler dropped. The cooler was taken out of service to check for leaks. A leak was found and repaired. An inventory check found a discrepancy of 275 gallons – assumed discharge to the East River. They inspected the discharge canal and the river – did not see any oil. Referred to Brian Mitchell, DEC Water Unit.

**Caller Remarks:**

TRANSFORMER COOLING FIN MAY HAVE CAUSED SPILL-RADIATOR TO BE SHUT

## DOWN AND REMOVED--SPILL IN PROCESS OF BEING CLEANED UP

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"  
E-mail rec'd 9/13/99 from Pat Van Rossem, KeySpan Energy:

"Groundwater monitoring well # MWRV-10 was installed in October of 1999 to evaluate conditions relating to Spill no. 9708177 associated with Transformer 3S on the Ravenswood Generating Station site. During the development of this well on October 18, 1999, a sheen was observed on water removed from the well as documented on the well development data sheet provided in the Ravenswood Generating Station Site Investigation Report dated April 19, 2000. During another sampling event on December

9, 1999, a trace sheen was noted on the water removed from this well when it was purged, as noted on the well purge data sheet provided in the Ravenswood Generating Station Site Investigation Report. Groundwater sample results from this well did not detect VOAs or PAHs in the groundwater.

During several additional rounds of groundwater level monitoring

performed on this well between December 22, 1999 and June 5, no product was detected in this well. In addition, on August 31, 2000, MWRV-10 was tested for product or sheen, and none was observed. The well was purged using vacuum enhanced fluid recovery techniques, and allowed to recover. After recovery, it was checked again for evidence of product or sheen, and none was observed.

Based on the fact that no VOAs or PAHs were detected in the groundwater sample results and no visual evidence of product or sheen has been noted in this well since December of 1999, it is unlikely that LNAPL is present in this well or in the formation."

TURBINE #30 GOVENOR VALVE LEAKED – CLEAN UP IN PROGRESS

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"  
e2mis 108539

Unit #30 Turbine Governor Valve developed a oil leak from a impulse valve. The bonnet of the valve became loose and 150 gallons of turbine lube oil sprayed onto the elevation grating . The spill was contained of the 16'elevation concrete floor and clean up with oil pads is in progress at the time of this report. The valve bonnet was re-attached to prevent a further incident. No oil entered the waterway or drains in the station area. Report filed by P.Mchugh Shift Supervisor at 1520 hrs. Tel– 706–2753

## Caller Remarks:

LEAK PIPE IN BLOW DOWN PIPE SPILLING 200 G OF BROMATE ON TO CONCRETE FLOOR CLEANUP IN PROGRESS

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

4/28/98 (Katz notes): Dom DiGiorgio, Env, Manager – contractor is HydroChem. Acid wash on #10 boiler – went through de-greasing stage (detergent); bromine wash went OK until discharge – line leak, went into sub-basement. HydroChem used vacuum truck to clean up. Oil/water separator sump pit shut down in case of emergency. No discharge to East River. Leak was found and is being repaired. Cause of failure was corrosion in pipe at elbow in weld.

10/10/97: TRANSFERRED FROM KATZ TO O'CONNELL.

 Caller Remarks:

TURBINE OIL OVERFLOWED – ALARM FAILED

---

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

6/27/95: Dom Digiorgio, Env. Manager – defective float switch. Level in oil reservoir for bowser (filtration unit) went up.

Alarm should have gone off and pump should have evacuated oil. Float was stuck. A separate float was supposed to initiate pump.

They have ordered a different typr of float device (Fischer Boston copacitive level sensor – totally electronic) – expected on site within 2 weeks.

Oil spilled into spent oil room.

**Caller Remarks:**

OIL SPILLED FROM A TURBINE – OIL IS CONTAINED IN A CONTAINMENT ROOM.

---

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

2/17/95: arrived on scene at 3:15 PM. FDNY Haz Mat on scene. Leak from south oil cooler on turbine unit 3. Pump rate – 50 to 60 psi. Pressure on cooler slowed to 12 psi. Much of oil contained in spent oil tank room. Some has penetrated secondary containment on south and west walls of tank. Con Ed has built a small berm around oil west of the spent oil room. Oil is close to overflowing the berm, beyond which there is a floor drain. Floor drains have been filled with sand bags and sorbent pads. Leak discovered by plant personnel near cooler, after drop in pressure was noted. Pete Guadiuso (Env Engineer), Dom DiGiorgio (Env Manager) – Con Ed

Presently pumping only when temp of bearings reaches 180 degrees F. They are worried about melting the bearings. Safe operating T is up to 650 degrees F. Need to get temp down to 600 degrees F, usually takes about 12 hrs.

See spill #s 9415138 (duplicate report from FDNY), 9415141 (duplicate report from NYCDEP).

---

Caller Remarks:**\*\*INCIDENT REPORT NRC #932394 \*\*****DESCRIPTION OF INCIDENT–**

CALLER IS REPORTING A KEROSENE SPILL THAT WAS DISCOVERED ON PROPERTY ON WEDNESDAY. THE SPILL WAS INITIALLY THOUGHT TO BE MINOR. FURTHER DISCOVERY OF MATERIAL AMOUNT LOST HAS BEEN MADE. THERE WAS A LEAK IN AN UNDERGROUND PIPE. THE LEAK HAS NOT BEEN LOCATED, BUT THE PIPE HAS BEEN ISOLATED AND DRAINED. THERE WAS A TOTAL OF 24,000 GALLONS OF KEROSENE RELEASED INTO THE GROUND FROM THE UNDERGROUND PIPE. THE PIPE LEADS FROM A STORAGE TANK TO A GAS TURBINE UNIT ON THE FACILITY.

**REMEDIAL ACTIONS**

THE PIPE WAS ISOLATED AND DRAINED. INVESTIGATION UNDERWAY.

Release Secured: YES

Release Rate:

Estimated Release Duration:

---

## DEC Investigator Remarks:

This is a duplicate spill report to a previously reported spill.

Caller Remarks:

DUE TO A LEAK IN THE PIPE LINE ABOUT 200 GALLONS OF PRODUCT SPILLED TO THE VALUT AREA OF THE TANK. CLEAN UP IS PENDING. CONTRACTORS ARE ON SITE.

UPDATE 04/16/09 1658HRS: THE AMOUNT OF PRODUCT SPILLED TO THE VAULT IS 1000 GALLONS.

DEC Investigator Remarks:

Transfer pipeline from barge to tank. Pipe into the vault had a leak in an elbow. Leak was confined in an underground trench. Pipeline was taken out of service until repairs can be made. Cleanup is underway as of 2PM. Cleanup contractor is: Waste Recycling 516-790-1450.

\*\*\*UPDATE\*\*\* 5PM – Spill is larger than previous thought. There is a network of underground trenches with pipelines, electrical lines and water lines running through them. This oil spill has flowed into several attached trenches and the cleanup crew is trying to find all the contamination.

A site visit is required

04/17/09 Performed site visit today. Approx. 800 gallons released from the pipe leak inside the trench. So far approx 500 gallon recovered and trench cleaned. About 200 ft of trench still have product contained in it. Clean up on going. Point of contact: Kenneth Yager, (718) 706-2702. (sr)

05/14/09 Performed site meeting this morning with TransCanada rep, Kevin Fennessey. Trench has been cleaned up. Minor product seeped through the Trench seem and trapped within fabric liner. That is hard to recover. (sr)

11/06/09 Rec'd closure report. Case closed. (sr)

**Caller Remarks:**

Fluid is contained at this time. Clean up is completed.

**DEC Investigator Remarks:**

4/6/09–HRAHMED–Spoke to ConEd ERT. Dielectric Fluid leaked from a coupling in the shaft of feeder pipe and was spilled on 500 gal. of water in the tunnel. Miller Environment was responded for the cleanup. They pumped out the oil/water mixture in to a oil–water separator and took sample, pending results. Miller will respond to do a final cleanup. ERT will forward the report. The leak was repaired.

6/2/09 – Austin – 1 gal. oil spill cleaned up – see EMIS reports in EDocs file – closed – end

## Caller Remarks:

oil reservoir over filled spilling approx 100 gallons or less of Lube Oil, into another concrete tank room below reservoir, have put pads down, contacted Waste Recycling Solutions to do clean up.

## DEC Investigator Remarks:

03/02/09– Zhune spoke to Gerry Waller from Trans Canada (718) 706-2753. he said the fuel line system valve was open. The main turbine reservoir overflow. Approximately 60 gallons of lube oil went to the concrete beneath the reservoir. It's contain in the room. Waste Recycling solution is doing ythe cleanup.

03/02/09– Zhune called to Gerry at 6:00PM. He said cleanedup is done.

## Caller Remarks:

RAVENES SUBSTATION– CONED # 201218

## DEC Investigator Remarks:

201218. see eDocs.

Visited Keyspan test pit site. Spoke to Ken Yager. He is consolidating his test pits into one large excavation. He thinks he has reached the periphery of the release and the source is within. A ConEd feeder traverses the open excavation. There was a similar release at this location last summer. Source was never found. Ken has arranged to have his supply lines tested tomorrow by a contractor who does a cathodic investigation. ConEd intends to clean their structure quickly and then bill Keyspan. Ann Ip will oversee ConEd's interest in the matter. Breen.

4/24/06: See spill no. 0504119 for additional details. Close out.(JHO)

Caller Remarks:

defective valve, all contained in a d-tunnel, on site cleaning up

DEC Investigator Remarks:

3-1-06. Ken Yager (718-706-2702 or 917-952-3603) reports that 20,000 gallons of No. 6 FO was released in the "D" tunnel that passes under 36 Avenue and connects the tank farm to the north to the power station to the south. The tunnel is concrete, about eight feet high and six feet wide. 8000 gallons was removed from the tunnel before the product cooled and solidified. A contractor is now heating the product with steam to remove it from the tunnel. The water will be removed in an oil/water separator brought to the site and then the product returned to the tank from which it came. A 1/4 inch hole in the supply line or return line in the "D" tunnel was the source of the release. An alternate run of piping is being used until repairs are made.

Ken reports that the new owner of the power station, a British firm, will be touring facility today with a huge entourage. Key Span was the former owner, having purchased the facility from ConEd.

I inspected the site in the company of Ken Yager and Mohamed Basri (718 - 706 - 2721 or 917 - 731 - 8578). 500 feet of tunnel was impacted, as product flowed into two other interconnected tunnels. A portable Steam boiler is on site to thaw product remaining. Cleanup is expected to take a few weeks.

It appears that the tunnels are not outfitted with leak detectors.

4-27-06. M. Basri reports that the clean up is finished. 78K gallons of No.6 was recovered and returned to their tanks. There was no impact to the environment.

5-4-06. M. Basri reports he is sending in a complete report on the cleanup. He says 74K gallons of No.6 was recovered and returned to their tanks. 162K gallons of washwater was trucked out to their plant at Northport for processing.

5-16-06. closure report received. see eDocs.

## Caller Remarks:

flange on pipe failed causing oil to spill onto concrete. spill contractor unkn name contacted to perform clean-up.

## DEC Investigator Remarks:

11/9/05-Vought-Called Keyspan (O'Donnell) and spoke to Greco and cleanup is continuing. Source has been secured. Spill was on steel structural work and beneath is concrete. No sewers or drains affected. Cleanup company is All-state environmental. Spill closed due to no impact to subsurface or drains.

Caller Remarks:

CONED # 159618: NO TO 5 QUESTIONS;

DEC Investigator Remarks:

08/18/2009 – See eDocs for Con Ed report detailing cleanup and closure.

Con Ed incident no. e2mis no 159618

7/7/2005 Con Ed crew found approx 150 gallons of unknown oil which appeared to be fuel oil in manhole MH 3637 on Ravenswood Generating Station property. They also inspected nearby service box SB 10198 and found unknown oil on walls and cable, and transformer vault VS 1580 and found approx 300 gallons of oil. All 3 structures are interconnected. (JHO)

7/7/05

MATRIX: OIL GRAB – LOCATION: N/S 37 AVE 550'W/O VERNON BLVD – RAVENSWOOD STATION  
 STRUCTURE: MANHOLE 3637

Analysis indicates the presence of a substance similar to a heavy fuel oil.

MATRIX: OIL GRAB – LOCATION: N/S 37 AVE 590'W/O VERNON BLVD  
 STRUCTURE: VAULT 1580 FEEDER ID: PCBs < 1 ppm

Lab Sequence Number: 05-06613-002 – Flash Point, PMCC > 140 deg F

7/15/05–Vought–Received update call during off–hours response. Update was to update amount to 2000 gallons. Spill contained in vault and to be vacuumed out on 7/15/05. Containment based on steady level of oil in vault. Site contact is Kenneth Yaeger 917–952–3603 (cell) 718–706–2753. Spill referred to Arakhan due to involvement above.

#### 7/19/05 Update

Arakhan met with KeySpan personnel on site on 7/19 to inspect the underground structures affected. It has been agreed that Keyspan will perform all cleanup since ConEd does not have any equipment on–site containing heavy fuel oil. Staff instructed KeySpan to steam clean the lower portion of the upgradient structure to determine if oil is infiltrating the structure from surrounding soils. (Arakhan)

#### Update 8/16/05

Marine Envr Services cleaned spill locations on 7/26/05 under Con Edison and KeySpan supervision. Locations were monitored from 7/27/05 to 8/15/05 and no oil re–appeared.

#### Notes from SP 0601793:

5–18–06. Mohammed Basri called to report that Keyspan has vacuumed out the product in the manhole and will be washing it today. The manhole contains a feeder, so they had ConEd people in for advice. They want the feeder clean. Keyspan does not know the source of the No. 6. They had a release in a nearby location recently. They will provide an update later on. (GDB)

7/11/06: Spill re–opened and re–assigned to O'Connell. Visited site with Ken Yager, KeySpan Env. Manager. Originally I suspected that this might be residual oil from the large spill circa 1994 which affected the employee parking area (spill no. 9411975). However, Ken showed me photos taken of the original spill area and the boundary is clearly south of the area where they are now excavating. He explained that the conduits which lead to these Con Ed underground structures from Vernon Blvd cross over the fuel oil pipelines which run underground from the Rainey Tank Farm/tunnels to the Ravenswood Generating Station. KeySpan had a contractor install several vactored soil borings around the area where the electrical conduit intersects the pipelines, and they encountered contaminated soil at approximately the depth of the pipelines. The contractor is currently expanding the excavation to determine whether there is a small leak in one of the pipelines and to make repairs. See eDocs for photographs. (JHO)

7/14/06: Voice mail message from Ken Yager – they think they have uncovered the leak location. They are excavating approximately 10 feet north of the original excavation and uncovered the pipelines and duct work, and there is evidence of free flowing oil. They will expand the excavation and try to pinpoint the leak location. (JHO)

7/18/06: Con Ed reported spill no. 0604291 – oil in distribution manhole located on Vernon Blvd outside Ravenswood gate. Con Ed contact is Ann Ip (B/Q EH&S 718–802–5162 office, 347–297–0404 cell). (JHO)

7/20/06: spoke with Ken Yager – he now says that the free flowing oil noted on Friday 7/14 was coming out of the concrete duct bank, not out of the pipeline. He says he does not think there is a leak on the line, but that this is residual from the 1994 spill (see 7/11/06 notes, above). He thinks that the oil is resurfacing each year when the water table rises and "floats" the oil into the duct bank. The problem with this theory is that the water table is significantly below the pipeline and duct bank. I suspect there is a small leak in one of the pipes that becomes active as the warm weather heats up whatever material around the pipe is plugging the pin hole. I will request that they perform a precision test on the pipe to confirm whether there is an ongoing leak. In the meantime, Con Ed will have to excavate the extent of the duct work to clean and remove any contamination.

Visited site in the afternoon with Ken Yager. The excavation has now exposed all 4 pipelines as well as several duct banks and

other utility conduits. They need to finish removing contaminated soil and shoring up the hole. At that point, we will need to formulate a plan for additional testing and excavation with Con Edison's input, and with input from KeySpan's Environmental Engineering group. (JHO)

11/13/06 – following protracted negotiations with Praxair, KeySpan had all 4 pipelines tested in vicinity of excavation. Also, they tested the underground section of the 74th St transfer piping as part of permanent closure plan for that section. The testing was conducted in Sept/Oct 2006. Received copy of testing report today. Praxair found elevated tracer gas in several locations (probes 2, 17, 25 and 36). They are currently exposing the piping at probe 25 looking for a leak. The excavation contains free product (hot – tested at 120 deg. F – so it is from current leak). They have not found leak yet. Since all 4 lines were inoculated together, they do not know which line may be leaking. Mike Lauro (KeySpan) suggested that they could perform an acoustical test to more accurately locate the leak. I also suggested a pressure-decay test to isolate which line may be leaking. If they can isolate and take that line out of service, they can defer the remedial excavations until next year, when all 4 lines are scheduled to be taken out-of-service and replaced with above-ground piping. See eDocs for photos of current excavation boundaries. (JHO)

12/14/06 – Met with Ken Yager, John Rigert at the site. Pat van Rossem participated by conference call. KeySpan has continued excavating and has still not located a leak. They have decided to utilize "Guided Wave" testing on the pipes to isolate the location of the insulating flanges on the pipe that are south of the existing excavation. They hope that the insulating flanges are the location of the leak, based on the possibility that the bolts on the flanges are not tight, or that the flange itself may be deteriorated. Once the flange has been excavated and examined and repaired, as necessary, they will initiate another test on the lines to confirm they are tight. (JHO)

12/18/06: e-mailed link to Yager and Rigert listing testing methods for large diameter pipes. (JHO)

3/2/07: sampling plan for excavation submitted by Pat Van Rossem (KeySpan):

"As discussed, we are planning to perform the endpoint sampling requested for the large excavation associated with the No. 6 fuel oil leak investigation (located near the east side of Unit 40). NYSDEC requested that we refer to NYSDEC's DER-10 for guidance related to the sampling approach. In accordance with DER 10 section 3.9 (5) ["below grade piping" on page 53– Dec. 2002], the following endpoint sampling plan is proposed to help provide the basis for determining whether any additional investigation is warranted. The larger excavation is approximately 90 ft. by 12 ft. by 10 ft. deep, and the smaller excavation is approximately 12 ft. by 20 ft. by 10 ft. deep. The oil pipes are located at approximately 9–10 ft. below ground surface."

"As per the attached sketch [SEE EDOCS], we propose to collect 9 bottom soil samples from one foot below the bottom of the excavation (10–11 feet bgs). In addition we will

**Caller Remarks:**

Spill was contained on concrete. Currently being cleaned up.

**DEC Investigator Remarks:**

5-10-05. Dom DiGeorgio reports that this was an accidental release from an out of service turbine. Work crew was told to wait a half hour. Crew thought they were told to finish within a half hour. Work crew opened a line before it was sealed off and drained. Clean up is in two stages. First to vacuum up the liquid, then to wash the soiled surfaces. First stage was completed right away. Second stage is underway.

**NO MATERIAL INFORMATION GIVEN FOR THIS SPILL****Caller Remarks:**

turbine oil – 250 gallons onto turbine floor

Absorbant material – leaked is contained – manpower cleaning up

Class 2 spill

Failed lift pump pressure switch

**DEC Investigator Remarks:**

Update 4/18/05

The 30 unit LP turbine B-3 lift pump pressure switch failed. Approximately 250 gallons of turbine oil leaked onto the turbine floor. Cleanup started immediately and is continuing as of 1:10 PM on 4/18/05. All floor drains have been cleaned and oil/water separator has not released oil into discharge.

Update 5/4/05

Low pressure B-3 lift pump was repaired and returned to service on 4/18/05. Marine Env Services conducted cleanup at elevation 53 under B-3 lift pump, at low pressure heater at elevation 34 and 16, and at elevation 02 (sub-basement).

**Caller Remarks:**

4 oz per hour –

valve dripping – #1 transformer east.

leak is contained with a drip container.

Chris Charles cleanup contractor will be responding for soil remediation on 1/20/05 at 0800 hours.

**DEC Investigator Remarks:**

2/23/05: fax report from Mohammad Basri, KeySpan EH&S – Transformer 1E has 2 small oil drips coming from oil pumps. Dripping onto concrete base and then onto bluestone. Drip rate 4 ounces per hour. Placed absorbent pads down, and there are drip catchers in place. Spill contractor called in to start bluestone clean up in AM (2/20). Transformer isolated.

Called and left message for Dom DiGiorgio (KeySpan Env. Manager) for further information re: PCB concentration, total leak amount (spill report lists 100 gallons), etc. (JHO)

2/24/05: Spoke with DiGiorgio. PCB concentration from sample of leaking oil is ND. Leak amount estimated based on remaining amount in transformer as well as amount seen in soil/bluestone. Contractor is removing bluestone and soil, and has excavated a sump in the moat to collect separate-phase oil. This transformer was previously investigated (wells RB-1 and RB-3) when oil was found leaching into the discharge canal. Temporary repairs of current leaks have been made, permanent repairs will be conducted in March when transformer is out of service for routine maintenance. Told DiGiorgio to contact me when cleanup is complete to arrange post-exc sampling. (JHO)

3/10/05: Sam Arakhan inspected spill location on 3/8/05 at 09:55 AM. Approximately two and one half feet of contaminated bluestones were removed from the moat but visible contamination remained. Dom DiGiorgio will contact engineering dept. to provide guidance regarding structural safety issues prior to removing more bluestones; he was advised to analyze post-ex samples for oil ID, PCBs and TPH. (SKA)

3/30/05 Sam Arakhan met with Dom GiGiorgio and Patrick Van at the site of the spill on 3/30/05 to discuss further remedial measures for this spill. It was decided that contaminated material will be removed to the extent that structural integrity of nearby structures are not compromised. If there is no contamination visible at that point, end point samples will be collected and analyzed for TPH. If TPH level is still elevated, or if contamination is visible after excavation is stopped, the area will be backfilled to the original elevation and a cover will be installed. Monitoring will be conducted at two downgradient wells already installed. (SKA)

Update 6/22/05

Documentation was received from KeySpan regarding excavation of contaminated soils and end-point sampling. Sampling results were satisfactory.

## Caller Remarks:

UNIT #30 MECHANICAL FUEL FAILURE CAUSING OIL TO SPILL ON FLOOR, IN PROCESS OF BEING CLEANED UP:

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

2/17/04, 3:45 PM – called Dom DiGiorgio (Env. Manager). Spill occurred on 34 foot elevation – no impact to drains or to oil/water separator. They called contractor, but sent them away because plant personnel were almost finished with cleanup. He will fax me report. (JHO)

4:15 PM – faxed report indicates leak was from failed mechanical seal on lift pump. The pump was secured and valved off to stop leakage. (JHO)

3/4/04: in response to inquiry from DEC, Dom DiGiorgio (facility Environmental Manager) sends e-mail:

"Status: The seal that leaked was on a "Lift" pump on No. 3 turbine. The pump was replaced, however, since this was not the first time this problem occurred with these pumps, KeySpan Power Engineering group is investigating the availability of a better design, or more reliable pump."

CLEAN UP IN PROGRESS AND ALMOST COMPLETED

---

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ"  
INSPECTOR NOTES:

11:00 AM. RODRIGUEZ MET WITH DOMINICK DIGIORGIO. HE EXPLAINED THAT THE STEAM TURBINE "BIG ALLIS" DEVELOPED A VIBRATION THAT CAUSED ON THE THE LUBE OIL LIFT PUMPS TO LEAK APPROX. 100 GALLONS. ALL STATE POWER VAC WAS AT THE STATION AND THE CLEANUP WAS ALMOST COMPLETED. THE CLEANUP WAS DONE USING OIL PADS AND CITRIC CLEAN DEGREASER. THE PUMP WAS ADJUSTED AND IT WAS NOT LEAKING. THE SUB-BASEMENT WAS INSPECTED AND NO SIGNS OF OIL WERE NOTICED. THE SUMP PUMP WAS DISCONNECTED AS A PRECAUTION. THE TURBINE WILL HAVE TO BE TAKEN OFFLINE FOR REPAIRS. 11/5/2003

11/12/2003, RODRIGUEZ INSPECTED AFFECTED AREA. CLEANUP WAS COMPLETED AND PUMP WAS REPAIRED. ARS

ruptured fuel oil discharge line – spill has been stopped, contained on land – they are contacting a contractor for clean up

---

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"  
5/19/03 – ROSSAN, DDO – This spill has been re-assigned from Tipple to Foley (ConEd monitor).

5/19/03 0746hrs Spill incident form received from Keyspan.

5/20/03 Arakhan, Rodriguez, Foley inspected transfer area which is used to pump #6 fuel oil from the Rainey tanks to the mounded tank (to feed the boilers). An oil line ruptured and spilled approx 500gal of #6FO into moat and around moat. Bluestone and soils will be removed. During inspection, it was noted that there is oil on aboveground piping and around steam vent line. DiGiorgio later confirmed that this was due to the same incident. Clean Harbors was on site steam cleaning the moat. Repairs will be completed after the cleanup is complete. Dominick DiGiorgio (Env Mgr) will contact DEC when cleanup is complete. (KMF)

3/4/04: in response to inquiry from DEC, Dom DioGiorgio (facility Environmental Manager) sends e-mail:

"Status: The ruptured line was replaced and the cleanup was was  
performed by Clean Harbors Environmental."

## Caller Remarks:

RUPTURED OIL HEADER LINE – FEED LINE TO LUBE PUMPS – ALMOST ALL CLEANED UP.

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ"

10/29/01 Ruptured oil line unknown quantity of oil (est. 500 gallons). Oil cascaded down to basement level which is now flooded with oil and water. Pump operates on manual – oil is at 4' to 5' above the intake for the pump, which goes to separator. Dom DiGiorgio (Env. Manager) asked if he could pump the water only. Told him yes, but only to 1' above floor level. Also, told him to have someone monitor the separator during the pumping. (ARS)

9/10/04

E-mail to Dom DiGiorgio: "I'm trying to close out a spill from October 29, 2001 – 500 gallons lube oil in basement from unit 30 oil header line rupture. Can you tell me how/when the spill was cleaned up and when the equipment was repaired?" (JHO)

9/27/04: Response from DiGiorgio:

"The initial response by station personnel was

to deploy absorbent material. Allstate Powervac was on site and they performed the full cleanup. The waste was sent to Cycle Chem on 11/01/01. The ruptured line was repaired." Close out. (JHO)

## MAP LOCATION INFORMATION

Site location mapped by: MANUAL MAPPING (3)

Approximate distance from property: 447 feet to the WSW

## ADDRESS CHANGE INFORMATION

Revised street: 64TH / YORK AVE

Revised zip code: NO CHANGE

Special Note: The New York State Department of Environmental Conservation and the U. S. Environmental Protection Agency have reported different locations for this hazardous waste identification number. Available information for both locations is summarized below.

US EPA RCRA Type: GENERATOR TYPE NOT GIVEN

Notification date: None Given

Land Disposal:

Receives offsite waste:

Incinerator:

Storer:

Treatment facility:

Transporter:

Contact Name: MIKE ANGELONE

Source Type: Emergency

Contact Phone: 917-837-3985 Contact Info Date: 11/06/2008

|---------------|-----------------------------------------------------------------------|-----------------|----------------|---------------------|------|----------------------------|------|
| D022          | Chloroform                                                            |                 |                |                     |      |                            |      |
|               | More than one waste code was reported for the following waste amount: | 30              | POUNDS         | GENERATED           | 2009 |                            |      |
| U007          | 2-Propenamide                                                         |                 |                |                     |      |                            |      |
| U188          | Phenol                                                                |                 |                |                     |      |                            |      |
|               | More than one waste code was reported for the following waste amount: | 60              | POUNDS         | GENERATED           | 2009 |                            |      |
| D022          | Chloroform                                                            |                 |                |                     |      |                            |      |
| U188          | Phenol                                                                |                 |                |                     |      |                            |      |
| D008          | Lead                                                                  |                 |                |                     |      |                            |      |
|               | More than one waste code was reported for the following waste amount: | 40              | POUNDS         | GENERATED           | 2009 |                            |      |
| F003          | Spent non-halogenated solvents                                        |                 |                |                     |      |                            |      |
| D032          | Hexachlorobenzene                                                     |                 |                |                     |      |                            |      |
|               | More than one waste code was reported for the following waste amount: | 160             | POUNDS         | GENERATED           | 2008 |                            |      |
| D001          | Solid waste that exhibits the characteristic of ignitability          |                 |                |                     |      |                            |      |
| D022          | Chloroform                                                            |                 |                |                     |      |                            |      |
| F003          | Spent non-halogenated solvents                                        |                 |                |                     |      |                            |      |
|               | More than one waste code was reported for the following waste amount: | 5               | POUNDS         | GENERATED           | 2008 |                            |      |
| D003          | Solid waste that exhibits the characteristic of reactivity            |                 |                |                     |      |                            |      |
| D002          | Solid waste that exhibits the characteristic of corrosivity           |                 |                |                     |      |                            |      |
|               | More than one waste code was reported for the following waste amount: | 1640            | POUNDS         | GENERATED           | 2008 |                            |      |
| D001          | Solid waste that exhibits the characteristic of ignitability          |                 |                |                     |      |                            |      |
| D008          | Lead                                                                  |                 |                |                     |      |                            |      |
| D022          | Chloroform                                                            |                 |                |                     |      |                            |      |
| D038          | Pyridine                                                              |                 |                |                     |      |                            |      |
| F002          | Spent halogenated solvents                                            |                 |                |                     |      |                            |      |
|               | More than one waste code was reported for the following waste amount: | 50              | POUNDS         | GENERATED           | 2008 |                            |      |
| D001          | Solid waste that exhibits the characteristic of ignitability          |                 |                |                     |      |                            |      |
| F002          | Spent halogenated solvents                                            |                 |                |                     |      |                            |      |
| F003          | Spent non-halogenated solvents                                        |                 |                |                     |      |                            |      |
| D038          | Pyridine                                                              |                 |                |                     |      |                            |      |
|               | More than one waste code was reported for the following waste amount: | 50              | POUNDS         | GENERATED           | 2008 |                            |      |
| D001          | Solid waste that exhibits the characteristic of ignitability          |                 |                |                     |      |                            |      |

| F001 | The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)                                                                                                   |
| F002 | The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,2,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)                                                                        |
| F003 | The following spent non-halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non-halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non-halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I)* |
| F004 | The following spent non-halogenated solvents: Cresols and cresylic acid, and nitrobenzene; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures. (T)                                                                                                                                                                                                                            |
| F005 | The following spent non-halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in F001, F002, or F004; and                                                                                                                                                                                                                                              |

still bottoms from the recovery of these spent solvents and spent solvent mixtures. (I,T)

- F006 Wastewater treatment sludges from electroplating operations except from the following processes: (1) Sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc–aluminum plating on carbon steel; (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum. (T)
- F007 Spent cyanide plating bath solutions from electroplating operations. (R, T)
- F008 Plating bath residues from the bottom of plating baths from electroplating operations where cyanides are used in the process. (R, T)
- F010 Quenching bath residues from oil baths from metal heat treating operations where cyanides are used in the process. (R, T)
- F012 Quenching waste water treatment sludges from metal heat treating operations where cyanides are used in the process. (T)
- F027 Discarded unused formulations containing tri–, tetra–, or pentachlorophenol or discarded unused formulations containing compounds derived from these chlorophenols. (This listing does not include formulations containing Hexachlorophene synthesized from prepurified 2,4,5–trichlorophenol as the sole component.) (H)
- F028 Residues resulting from the incineration or thermal treatment of soil contaminated with EPA Hazardous Waste Nos. F020, F021, F022, F023, F026, and F027. (T)
- F038 Petroleum refinery secondary (emulsified) oil/water/solids separation sludge – Any sludge and/or float generated from the physical and/or chemical separation of oil/water/solids in process wastewaters and oily cooling wastewaters from petroleum refineries. Such wastes include, but are not limited to, all sludges and floats generated in induced air flotation (IAF) units, tanks and impoundments, and all sludges generated in DAF units. Sludges generated in stormwater units that do not do not receive dry weather flow, sludges generated in aggressive biological treatment units as defined in Section 261.31(b)(2) (including sludges generated in one or more additional units after wastewaters have been treated in aggressive
- P001 2H–1–Benzopyran–2–one, 4–hydroxy–3–(3–oxo–1–phenylbutyl)–, & salts, when present concentrations greater than 0.3%
- P002 Acetamide, N–(aminothioxomethyl)–
- P003 Acrolein
- P005 Allyl alcohol
- P006 Aluminum phosphide (R,T)
- P007 5–(Aminomethyl)–3–isoxazolol
- P008 4–Aminopyridine

# How Toxic Site Locations Are Mapped

Toxics Targeting maps toxic site locations on a digital version of the U. S. Census map or those used by local authorities using addresses and map coordinates provided by site owners/operators or government agencies. In order to allow site locations to be verified independently, the information used to map each site is presented in the first section of each Toxic Site Profile, along with a description of the mapping technique used and any address corrections that were made in order to locate toxic sites with incomplete or inadequate site location information. The mapping process is explained below.

Map Identification Number: 12

Site Name: Acme World Manufacturing, Inc.

Site Address: 55 Main Street

Anytown, NY 11797

## MAP LOCATION INFORMATION

Site location mapped by:

Address Matching

Note: Some sites have an address match location and a map coordinate location. Both locations are mapped because they can be equally correct.

or Map Coordinate

or Manual Mapping

or Site Visit

1) Most toxic sites are mapped by matching addresses provided by site owners/operators or government agencies with locations on a digital version of the street or parcel map. These site locations are identified with the method used to map them.

2) Some toxic sites are located using map coordinates provided by site owners/operators or government agencies. These site locations are identified "map coordinate." Map coordinates for Toxic Wastewater Discharges, Toxic Release Inventory sites and Major Oil Storage Facilities should be considered suspect.

3) Incomplete addresses or map coordinates require some site locations to be determined by commercial street maps (manual mapping), site visits, map coordinates from other databases and address location services. Application of any of these methods is identified accordingly.

## ADDRESS CHANGE INFORMATION

Revised Street: NO CHANGE

Revised zip code: NO CHANGE

4) Site addresses are sometimes corrected to eliminate obvious errors that prevent sites from being mapped. All address corrections are noted here.

# Information Source Guide

*Toxics Targeting's Environmental Reports* contain government and other information compiled on 21 categories of reported known or potential toxic sites. Each toxic site database is described below with information detailing a) the source of the information, b) the date when each database is covered to and c) when *Toxics Targeting* obtained the information..

1) **National Priority List for Federal Superfund Cleanup:** Toxic sites nominated for cleanup under the Federal Superfund program. Annual compilation of special two-page detailed profiles of NPL sites. Also includes delisted NPL sites.

ASTM required.\* Fannie Mae required.\*\*

Data attributes updated from: 7/20/2012.

Data obtained by Toxics Targeting: 7/20/2012.

New Facilities updated through: 7/20/2012.

Data obtained by Toxics Targeting: 7/20/2012.

2) **Inactive Hazardous Waste Disposal Site Registry:** New York State database that maintains information and aids decision making regarding the investigation and cleanup of toxic sites. The Registry's data includes two-page profiles noting site name, ID number, description, classification, cleanup status, types of cleanup, owner information, types and quantities of contaminants, and assessment of health and environmental problems. Also included are sites that qualify for possible inclusion on the Registry. These Registry Qualifying sites may or may not be on the Site Registry.

Data attributes updated through: 8/10/2012.

Data obtained by Toxics Targeting: 8/27/2012.

New facilities updated through: 8/10/2012.

Data obtained by Toxics Targeting: 8/27/2012.

4) **CERCLIS:** Toxic sites listed in the Federal Comprehensive Environmental Response, Compensation and Liability Information System. Includes Active and No Further Remedial Action Planned (NFRAP) sites.

ASTM required.\* Fannie Mae required.\*\*

Source: U. S. Environmental Protection Agency.<sup>1</sup>

Data attributes updated through: 11/28/2011.

Data obtained by Toxics Targeting: 12/21/2011.

New Facilities updated through: 11/28/2011.

Data obtained by Toxics Targeting: 12/21/2011.

5) **Brownfield Programs:** NYS programs for sites that are abandoned, idled or under-used industrial and/or commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.

ASTM required.\*

Source: New York State Department of Environmental Conservation.<sup>2</sup>

Data attributes updated through: 9/12/2012.

Data obtained by Toxics Targeting: 9/12/2012.

New Facilities updated to: 9/12/2012.

Data obtained by Toxics Targeting: 9/12/2012.

(a) **Brownfield Cleanup Program (BCP)**

(b) **Voluntary Cleanup Program (VCP)**

(c) **Environmental Restoration Program (ERP)**

6) **Solid Waste Facilities:** a compilation of the following 2 databases:

(a) **NYS Solid Waste Registry:** which includes, but is not limited to, landfills, incinerators, transfer stations, recycling centers.

ASTM required.\* Fannie Mae required.\*\* Source: New York State Dept. of Environmental Conservation.<sup>2</sup>

Data updated to: 12/31/2001.

Data obtained by Toxics Targeting: 3/16/2002.

(b) **1934 Solid Waste Disposal Site in New York City:** which includes sites operated by municipal authorities circa 1934. Source: City of New York Department of Sanitation (1984). The Waste Disposal Problem in New York City: A Proposal For Action.

7) **RCRA Hazardous Waste Treatment, Storage or Disposal Facility Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the DEC's Bureau of Hazardous Waste Facility Compliance pursuant to NYS Law and the Resource Conservation and Recovery Act (RCRA).

ASTM required.\* Fannie Mae required.\*\*

Source: New York State Department of Environmental Conservation.<sup>2</sup>

New facilities updated through: 8/26/2012.

New facilities obtained by Toxics Targeting: 9/6/2012.

Manifest transactions data updated to: 8/26/2012.

Manifest transactions data obtained by Toxics Targeting: 9/6/2012.

(b) **RCRA Notifier & Violations Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).

ASTM required.\* Fannie Mae required.\*\*

New facilities updated through: 8/10/2012.

Data attributes updated through: 8/10/2012.

Data obtained by Toxics Targeting: 8/27/2012.

Data obtained by Toxics Targeting: 8/27/2012.

8) **Spills Information Database:** Spills reported to the DEC as required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from Petroleum Bulk Storage Regulations) or 6 NYCRR Section 595.2 (from Chemical Bulk Storage Regulations). This database includes both *active* and *closed* spills.

ASTM required.\* Fannie Mae.\*\*

Source: NYS Department of Environmental Conservation.<sup>2</sup>

New spills through: 9/7/2012

Spill attribute data through: 9/7/2012

New spills data obtained by Toxics Targeting: 9/7/2012

Spill attribute data obtained by Toxics Targeting: 9/7/2012

Active spills: paperwork not completed.

Closed spills: paperwork completed.

Both active and closed spills may or may not have been cleaned up (see Date Cleanup Ceased in spill profiles).

9) **Major Oil Storage Facilities:** NYS database of facilities licensed pursuant to Article 12 of the Navigation Law, 6NYCRR Parts 610 and 17NYCRR Part 30, such as onshore facilities or vessels, with petroleum storage capacities equal to or greater than four hundred thousand gallons.

**Tank & other data withheld by NYSDEC as of 4/1/2002.**

ASTM required.\* Fannie Mae required.\*\*

Source: New York State Department of Environmental Conservation.<sup>2</sup>

Data updated through: 8/31/2012.

Data obtained by Toxics Targeting: 8/31/2012.

10) **Petroleum Bulk Storage Facilities:** a compilation of local and state databases of aboveground and underground petroleum storage tank facilities.

(a) **NYS Petroleum Bulk Storage Database:** This includes all New York State counties except

Cortland, Nassau, Rockland, Suffolk, and Westchester.

ASTM required.\* Fannie Mae required.\*\*

Source: NYS Department of Environmental Conservation.<sup>2</sup>

New facilities updated through: 8/31/2012.

Data obtained by Toxics Targeting: 8/31/2012.

Tank data updated through: 8/31/2012.

Data obtained by Toxics Targeting: 8/31/2012.

(b) **New York City Fire Department Tank Data:**

Source: New York City Fire Department.

**Data has been withheld by the NYC Fire Dept.**

Data obtained by Toxics Targeting: 2/18/1997

#### 11) **RCRA Hazardous Waste Generators and/or Transporters Databases:**

(a) **Manifest Information:** New York State database of hazardous waste facilities and shipments regulated by the NYS Department of Environmental Conservation's Bureau of Hazardous Waste Facility Compliance pursuant to New York State Law.

ASTM required.\* Fannie Mae required.\*\* Source: New York State Department of Environmental Conservation.<sup>2</sup>

New facilities updated through: 8/26/2012

New facilities obtained by Toxics Targeting: 9/6/2012.

Manifest transactions data updated to: 8/26/2012.

Manifest transactions data obtained by Toxics Targeting: 9/6/2012.

(b) **RCRA Notifier & Violations Information:** U. S. Environmental Protection Agency database of hazardous facilities regulated pursuant to the Resource Conservation and Recovery Act (RCRA).

ASTM required.\* Fannie Mae required.\*\*

Source: U. S. Environmental Protection Agency<sup>1</sup>

New facilities updated through: 8/10/2012.

Data obtained by Toxics Targeting: 8/27/2012.

Data attributes updated through: 8/10/2012.

Data obtained by Toxics Targeting: 8/27/2012.

12) **Chemical Bulk Storage Facilities:** New York State database of facilities compiled pursuant to 6NYCRR Part 596 that store regulated substances listed in 6NYCRR Part 597 in aboveground tanks with capacities greater than 185 gallons and /or in underground tanks of any size.

**Tank & other data withheld by NYSDEC as of 4/1/2002.**

ASTM required.\* Fannie Mae required.\*\*

Source: New York State Department of Environmental Conservation.<sup>2</sup>

Data updated through: 8/31/2012.

Data obtained by Toxics Targeting: 8/31/2012.

13) **Historic New York City Utility Facilities (1898 to 1950):** An inventory of selected power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites identified in various historic documents, maps and annual reports of New York utility companies, including: Sanborn Fire Insurance Maps of NYC (1898-1950); Consolidated Edison Co. Annual Reports (1922-1939); Consolidated Edison Co. Map: "Boroughs of Manhattan and the Bronx Showing Distribution Mains of the New York Edison Co.," (1922); and Consolidated Edison document: "Generating and Annex Stations," (1911).

14) **Hazardous Substance Waste Disposal Site Study**: NYS database of waste disposal sites that may pose threats to public health or the environment, but could not be remediated using monies from the Hazardous Waste Remedial Fund.

Source: New York State Department of Environmental Conservation.<sup>2</sup>

Data updated to: 5/16/2000.

Data obtained by Toxics Targeting: 5/16/2000.

15) **Toxic Release Inventory (TRI)**: Federal database of manufacturing facilities required under Section 313 of the Federal Emergency Planning and Community Right-to-Know Act to report releases to the air, water and land of any specifically listed toxic chemical. See Fannie Mae requirement\*\* below.

Source: U. S. Environmental Protection Agency.<sup>1</sup> / NYS Department of Environmental Conservation<sup>2</sup>

Data updated through: 3/8/2004.

Data obtained by Toxics Targeting: 3/25/2004

16) **Toxic Wastewater Discharges (Permit Compliance System)**: Federal database of discharges of wastewater to surface waters and groundwaters. See Fannie Mae requirement\*\* below. Source: U. S. Environmental Protection Agency.<sup>1</sup>

Data updated through: 6/17/2004.

Data obtained by Toxics Targeting: 7/19/2004.

17) **Air Discharge Facilities**: EPA AIRS database containing address information on each air emission facility and the type of air pollutant emission it is. Compliance information is also provided on each pollutant as well as the facility itself.

See Fannie Mae requirement\*\* below.

Source: U. S. Environmental Protection Agency<sup>1</sup>

Data updated through: 11/24/1999.

Data obtained by Toxics Targeting: 1/6/2000

18) **Civil Enforcement & Administrative Docket**: This database is the U. S. EPA's system for tracking administrative and civil judiciary cases filed on behalf of the agency by the Department of Justice. Fannie Mae required.\*\*

Source: U. S. Environmental Protection Agency.<sup>1</sup>

New Sites through: 10/14/1999.

Data updated through: 10/14/1999.

Data obtained by Toxics Targeting: 11/18/1999.

19) **New York City Environmental Quality Review (CEQR) – E Designation Sites**: These sites are parcels assigned a special environmental ("E") designation under the CEQR process. E designation requires specific protocols that must be followed.

Data updated through: 9/12/2012.

Source: New York City Department of Planning<sup>3</sup>

Data obtained by Toxics Targeting: 9/17/2012

20) **Emergency Response Notification System (ERNS)**: Federal database of spills compiled by the Emergency Response Notification System. On-site searches only.

ASTM required.\* See Fannie Mae requirement\*\* below.

Source: U. S. Environmental Protection Agency.<sup>1</sup>

Data updated through: 1/31/2000.

Data obtained by Toxics Targeting: 2/15/2000

21) **Remediation Site Borders**: Remediation site borders reported by NYSDEC.

Source: New York State Department of Environmental Conservation.<sup>2</sup>

Updated through: 4/8/2009.

Data obtained by Toxics Targeting: 7/21/2009.

\* American Society of Testing Materials: Standard Practice on Environmental Site Assessments: Phase I Environmental Site Assessment Process (E1527-05).

\*\* Fannie Mae's Part X Environmental Hazards Management Procedures specify 1.0 mile searches for "any state or Federal list of hazardous waste sites (e.g. CERCLIS, HWDMS etc.)." Searches for the property and adjacent properties are specified for "chemical manufacturing plants," "obvious high risk neighbors engaging in storing or transporting hazardous waste, chemicals or substances" and "...any documented or visible evidence of dangerous waste handling... (e.g. stressed vegetation, stained soil, open or leaking containers, foul fumes or smells, oily ponds, etc." Searches for property and adjacent properties can include sites up to a quarter mile away (W. Hayward, Director, Multi-Family Business Planning and Control, Fannie Mae, personal communication, 5/94).

## 1.0 INTRODUCTION

AKRF, Inc. (AKRF) conducted a subsurface (Phase II) investigation at the Rockefeller University campus located at 1230 York Avenue in Manhattan, New York. The campus is bounded by York Avenue on the west, East 68<sup>th</sup> Street to the north, the FDR Drive to the east, and East 62<sup>nd</sup> Street to the south. The Phase II study was intended to determine whether the site had been adversely affected by current or former on- or off-site operations, and to characterize subsurface conditions at three onsite locations: the proposed sites of the Collaborative Research Center; the Laboratory Animal Research Center (LARC) Annex and Imaging Building; and the Electrical Vault. A site location map is provided as Figure 1.

The scope of the Phase II study was based on the results of a Phase I Environmental Site Assessment (ESA) conducted by AKRF in May 2007, which was part of a the Environmental Assessment Statement (EAS) being conducted for the site. The Phase II study was conducted in accordance with AKRF's New York City Department of Environmental Protection (NYCDEP)-approved Sampling Protocol and site-specific Health and Safety Plan (HASP) and the NYCDEP comments/recommendations letter dated May 9, 2007. The investigation was conducted on May 23 and 24, 2007, and included the collection of soil and groundwater samples for laboratory analysis. This report describes the methods and results of the Phase II investigation conducted by AKRF.

## 2.0 SITE BACKGROUND

### 2.1 Site Characterization and Proposed Development

A topographic survey was performed by Langan Engineering and Environmental Services, P.C. (Langan) on June 29, 2006. The surface topography at the site slopes down to the southeast towards the East River and ranges between elevation 28 and elevation 18. Site elevations are with respect to the Borough President of Manhattan Datum (BPMD), which is 2.75 feet above USC&GS Datum (Mean sea level at Sandy Hook, NJ, 1929).

Geotechnical engineering studies performed by Langan, dated August 21 and September 12, 2006, and GZA GeoEnvironmental, Inc. (GZA), dated November 9, 2006 indicated that the site is underlain by fill, sand, and decomposed rock. Bedrock was encountered at depths ranging from approximately 2 to 23 feet below grade. Groundwater depths measured at the Collaborative Research Center site in the northeastern portion of the campus ranged from elevation 24 to elevation 23. Groundwater most likely flows in a southeasterly direction toward the East River. Actual groundwater flow at the site, however, can be affected by many factors, including past filling activities, underground utilities and other subsurface openings or obstructions such as basements, underground parking garages and subway lines, bedrock geology, tidal fluctuations, and other factors beyond the scope of this study. Groundwater in Manhattan is not used as a source of potable water.

Construction activities involving soil disturbance were proposed for three locations on the existing Rockefeller University campus:

- Collaborative Research Center. This six-story building, with three subgrade levels, will be constructed in the below-grade courtyard between Theobald Smith Hall and Flexner Hall near the northeast corner of the campus, with a one-story section on the west side of Theobald Smith Hall. Existing surface grade on the site is at about elevation 28. The total area of excavation is about 16,575 square feet. The one-story section will be built on the existing grade and will require minimal excavation for foundation construction. The lower

level of the five-story section will have a finished floor elevation of 20, about 8 feet below existing grade. A Geotechnical Engineering Report for the site dated August 21, 2006 prepared by Langan indicated that the site was covered by 1 to 2 feet of uncontrolled fill. Decomposed bedrock was found directly below the fill. The report also indicated that groundwater was found perched on the bedrock surface, about 3 to 5 feet below grade.

- LARC Annex and Imaging Building. This four-story and one-story addition will be constructed on the east side of the existing LARC, which is located near York Avenue between East 63<sup>rd</sup> and East 64<sup>th</sup> Streets. Surface grade in this area is at about elevation 18. This building will have no basement and will require minimal excavation for foundation construction. The total area of soil disturbance is about 6,810 square feet. A geotechnical study by GZA Geoenvironmental, summarized in a letter report dated November 9, 2006, indicates that the top 6 feet of soil on the site is fill. This is underlain by a layer of brown, coarse to fine sand from 5 to 7 feet thick. Below this is decomposed bedrock.
- Electrical Vault. A new sub-grade electrical vault will be constructed under the south campus parking lot, located near York Avenue between East 65<sup>th</sup> and East 66<sup>th</sup> Streets. The total excavated area will be about 5,000 square feet. Surface grade in this area is about elevation 26. The bottom of the structure will be at elevation 7, or about 19 feet below grade. A geotechnical study performed by Langan Engineering and Environmental Services and summarized in a memo dated September 12, 2006, indicates that the top 7 to 8 feet of soil on the site is uncontrolled fill. This is underlain by a layer of brown coarse to fine sand from 12 to 15 feet thick. Below this is decomposed bedrock.

## 2.2 Site History

According to historic Sanborn fire insurance maps, the area of the Rockefeller University campus was first developed circa 1892 with a wagon yard, stables, and ice house, a malt house, and some homes. In 1907 the subject property was occupied by the Rockefeller Institute For Medical Research, the American Malting Corporation, the Franklin Coal Corporation, the New York Assistance for Improving the Condition of the Poor, the B.A. and G.N. Williams Cut Stone Yard, the Central Brewing Company, and a wagon repair shop. In 1951 the subject site was occupied by the Rockefeller Institute for Medical Research and a large park to the south of the campus. By 1976 the entire area was solely occupied by the Rockefeller University. The block to the south of the campus was occupied by the Consolidated Gas Company from 1892 through circa 1951 and was then occupied by Rockefeller University Housing. The surrounding area had been occupied by industrial yards and multistory residential homes for the first half of the 20<sup>th</sup> century. The neighborhood then gradually changed to a medical research community with high-rise residential units.

## 2.3 Previous Environmental Investigations

To identify potential sources of hazardous materials, a Phase I ESA was performed by AKRF, Inc. at the site in May 2006. The assessment concluded that the subject sites and the surrounding area have been occupied for over 50 years by health care/research facilities that generate and store a variety of hazardous and toxic materials and petroleum products as part of their daily operations. Although no significant impairments from on-site or neighboring facilities were suggested in the federal and state regulatory records, it remains possible that past accidental or intentional discharges from these facilities may have impacted soil or groundwater on the site.

In a letter to the Department of City Planning dated April 19, 2007, the NYCDEP recommended that a Phase II study for the subject property, including and groundwater sampling and analyses; be performed.

### **3.0 FIELD ACTIVITIES**

#### **3.1 Soil and Groundwater Sampling and Analysis**

On May 23 and 24, 2007, Hydro Tech Environmental, Corp. of Commack, New York (Hydro Tech) advanced 14 soil borings at the subject property, as shown on Figure 2. Six borings were advanced at the proposed site of the Collaborative Research Center, six borings were completed at the site of the proposed LARC Annex and Imaging Building, and two borings were advanced at the site of the proposed electrical vault.

The soil borings were advanced to the maximum proposed depth of excavation at each location or to bedrock, whichever was encountered first. At the Collaborative Research Center site, the maximum depth of excavation is about 10 feet for the five-story section of the building (sample locations B-1, B-2, and B-3), and about 4 feet for the one-story section (B-4, B-5, and B-6). However, at the Collaborative Research Center site, refusal due to bedrock was encountered at shallow depths ranging from 2.5 to 4.5 feet below grade. At the LARC Annex site (B-7, B-8, B-9, B-10, B-11, and B-14) the maximum depth of excavation is about 4 feet. Borings B-7, B-9, B-10, and B-11 were completed to a depth of four feet below grade. As a result of low recovery, borings B-8 and B-14 were extended to eight feet below grade and an additional boring B-14 was completed. At the Electrical Vault site (B-12 and B-13) the maximum depth of excavation is about 20 feet. Boring B-12 was completed to 20 feet below grade and in B-13 refusal due to bedrock was encountered at 12 feet.

The soil borings were advanced using a track-mounted and tractor-mounted Geoprobe® direct push probe (DPP) unit. Soil samples were collected using five-foot (track-mounted unit) or four-foot (tractor-mounted unit) long, two-inch diameter, stainless steel macrocore piston rod samplers fitted with an internal acetate liner. Soil samples were field-screened using a photoionization detector (PID), which measures relative concentrations of volatile organic compounds (VOCs) in the soil. The soil samples were collected from the boring locations based on field observations (odor and staining) and PID readings. At each boring location, AKRF field personnel recorded and documented subsurface conditions. Soil boring logs are provided in Appendix A.

Soil samples were collected for laboratory analysis from each of the soil borings, based on field observations (odor and staining) and PID readings. Two soil samples were collected from each boring advanced at the Electrical Vault site (B-12 and B-13) and one sample per boring was obtained from the LARC Annex and Imaging Building site (B-7, B-8, B-9, B-10, B-11, and B-14). At the Collaborative Research Center site (B-1 through B-6) only one soil sample was collected at each boring due to refusal at shallow depths. Groundwater was not encountered in any of the six borings (B-1 through B-6) completed at the Collaborative Research Center site and no groundwater sample was collected. The soil samples were analyzed by Chemtech Laboratories of Mountainside, NJ, a New York State Department of Health-certified laboratory, for VOCs by EPA Method 8260, semi-volatile organic compounds (SVOCs) by EPA Method 8270, pesticides by EPA Methods 8081, polychlorinated biphenyls (PCB) by EPA method 8082, and Target Analyte List (TAL) metals.

One trip blank and one field blank were submitted for laboratory analysis along with the collected samples. The field blank was analyzed for VOCs by EPA Method 8260, SVOCs by EPA Method 8270, pesticides/PCBs by EPA Methods 8081/8082, and TAL Metals (filtered and unfiltered analyses), and the trip blank was analyzed for VOCs by EPA Method 8260 only. Soil and water samples slated for laboratory analysis were placed in laboratory-supplied containers in accordance with appropriate EPA protocols.

### **3.2 Field Observations and Analytical Results**

Soil encountered during this investigation primarily consisted of uncontrolled fill that was comprised of brown, coarse to fine sand with traces of brick and gravel. At the Electrical Vault (B-12 and B-13), the fill extended to about eight feet below grade and was underlain by brown, coarse to fine sand with traces of clay to a depth of approximately 12 to 14. Below this was decomposed rock consisting of brown to grey mica schist. At the Collaborative Research Center site (B-1 to B-6), the fill encountered from approximately one to two feet below grade was underlain directly by decomposed rock. At the LARC Annex site (B-7 to B-11, and B-14) only uncontrolled fill was observed in the shallow borings extending to four feet below grade.

Groundwater was encountered in boring B-12 at a depth of approximately 17 feet below surface grade and in boring B-8 at a depth of approximately six to seven feet below grade. Groundwater was not encountered in any of the other borings advanced at the site as part of this investigation. Refusal on presumed bedrock was encountered at a depth of approximately 2.5 feet below grade in boring B-5; approximately three feet below grade in B-3 and B-4; approximately 4.5 feet below grade in B-1, B-2, and B-6; and approximately 12 feet below grade in B-13. Refusal was not encountered in B-12, which was extended to a depth of 20 feet below grade, and the borings completed at the LARC Annex site, which were extended to a depth of four feet (B-7, B-9 to B-11, and B-14) and eight feet (B-8).

Recovered soil at each boring was transferred from the sampler into sealable plastic bags. The headspace of each sample was screened for VOCs by placing the probe of a Model 580B PID inside the plastic bags. No PID headspace readings were detected above background in any of the soil borings except B-6 that had a reading of 4.3 ppm. Slight petroleum odor was also noted in boring B-6. Slight dark stain was observed in the fill material in borings B-11, B-12, and B-13. No staining, odors or other evidence of contamination was observed at the remaining sampling locations. Results of the field screening activities are provided in the soil boring logs in Appendix A.

Since groundwater was not encountered in any of the six borings at the Collaborative Research Center site (B-1 through B-6), no groundwater sample was collected.

## **4.0 LABORATORY ANALYTICAL RESULTS**

### **4.1 Soil Analytical Results**

Sixteen discrete soil samples were collected for laboratory analysis. One soil sample was collected from each boring location with the exception of borings B-12 and B-13, where a two soil samples were collected per location. Soil sample analytical results were compared to New York State Department of Environmental Conservation (NYSDEC) Part 375 Soil Cleanup Objectives (SCOs) for residential use. Soil descriptions, observations, and PID readings were recorded on the soil boring logs provided in Appendix A. Laboratory analytical data sheets are included in Appendix B.

Soil analytical results for VOCs are presented in Table 1. Four VOCs (2-butanone, acetone, carbon disulfide, and methylene chloride) were detected, but at low concentrations well below their respective SCOs. Acetone was detected in most samples, but was also present in the method blanks, indicating that it is a laboratory artifact. Methylene chloride was detected in several samples, and was also present in the field blank. The VOC compound 2-butanone was detected in soil sample B-12-5-7 and B-12-13-15 well below its SCO of 100,000 ppb. No SCO was given for carbon disulfide that was reported in soil sample B-4-1-2 at an estimated value of 17 ppb. No other VOCs were detected in any of the soil samples analyzed.

Soil analytical results for SVOCs are presented in Table 2. No SVOCs were detected in the six soil samples B-1-2-4, B-5-1-2, B-9-2-4, B-12-5-7, B-12-13-15, and B-13-10-12. Seventeen SVOCs were detected in the remaining soil samples with six common polycyclic aromatic hydrocarbons (PAHs), slightly exceeding their respective SCOs in the three soil samples B-3-2-3, B-10-2-4, and B-11-2-4.

- Benzo(a)anthracene exceeded its SCO of 1,000 ppb in B-10-2-4 (1,900 ppb), and in B-11-2-4 (1,000 ppb);
- Benzo(a)pyrene exceeded its SCO of 1,000 ppb in B-3-2-3 (1,000 ppb) and in B-10-2-4 (1,800 ppb);
- Benzo(b)fluoranthene exceeded its SCO of 1,000 ppb in B-3-2-3 (1,300 ppb), in B-10-2-4 (1,800 ppb), and in B-11-2-4 (1,300 ppb);
- Chrysene exceeded its SCO of 1,000 ppb in B-10-2-4 (1,900 ppb), and in B-11-2-4 (1,000 ppb);
- Indeno(1,2,3-cd)pyrene exceeded its SCO of 500 ppb in B-3-2-3 (520 ppb), in B-10-2-4 (1,100 ppb), and in B-11-2-4 (520 ppb);

Common PAHs were also detected in the remaining soil samples, but did not exceed their respective SCOs. Based on the nature and concentration of the compounds detected and the lack of significant evidence of contamination in the soil samples (i.e., staining, odors, or PID readings), the elevated levels of SVOCs detected in the samples were likely attributable to the urban fill present at shallow depths at the site and are not indicative of environmental contamination from historic on-site spills or releases. No SVOCs were detected in the native soil collected at greater depths below the fill (B-12-13-15 and B-13-10-12).

Metals analytical results are presented in Table 3. One exceedance of lead was found in one soil sample B-3-2-3 at a concentration of 453 ppm slightly above its SCO of 400 ppm. Based on the type and distribution of the identified metals concentrations, the metals are most likely attributable to urban fill (and/or the natural presence of these metals) at the site and do not appear to be indicative of environmental contamination from historic on-site spills or releases.

Analytical results for PCBs and pesticides are presented in Table 4. No PCBs were detected in any of the soil samples. Four pesticides were detected trace levels well below their respective SCOs in the three soil samples B-5-1-2, B-8-3-5, and B-10-2-4. The pesticide compound 4,4-DDE was found in soil samples B-5-1-2 and B-8-3-5 well below its SCO of 1,800 ppb at concentrations of 5.0 ppb and 2.2 ppb, respectively. The compound 4,4-DDT was detected in soil samples B-8-3-5 and B-10-2-4 well below their SCO of 1,700 ppb at concentrations of 4.1 ppb and 2.6 ppb, respectively. Alpha-Chlordane was identified in soil samples B-8-3-5 and B-10-2-4 well below their SCO of 910 ppb at concentrations of 2.3 ppb and 2.7 ppb, respectively. And gamma-chlordane was detected at a concentration of 1.8 ppb in soil sample B-10-2-4. Based on

the analytical results, the low concentrations of detected pesticides are most likely attributable to urban fill at the site and do not appear to be indicative of environmental contamination from historic on-site spills or releases.

#### **4.2 Groundwater Analytical Results**

Groundwater was not encountered in any of the six borings advanced at the Collaborative Research Center, and therefore no groundwater sample was collected for analyses.

#### **4.3 Quality Assurance/Quality Control (QA/QC) Analytical Results**

One field blank sample, FB-1, and one trip blank, TB-1, were collected for quality assurance/quality control (QA/QC) purposes and the analytical results were compared to the NYSDEC Class GA Ambient Water Quality Standards (drinking water standards), although groundwater is not used as a potable source in Manhattan.

A summary of the QA/QC analytical results are presented in Tables 5 through 8. No SVOCs, PCBs, or pesticides were detected in the field blank FB-1. Two VOCs, 1,2-dichloropropane and methylene chloride, were detected in the field blank. The compound 1,2-dichloropropane was found at an estimated concentration of 1.2 ppb, slightly exceeding its standard of 1 ppb. This compound was not detected in any of the soil samples collected at the site. The metal compounds, calcium, copper, sodium, and zinc were also detected in the field blank, but well below their standards. No VOCs were detected in the trip blank.

## 5.0 CONCLUSIONS AND RECOMMENDATIONS

AKRF, Inc. (AKRF) conducted a subsurface (Phase II) investigation at the Rockefeller University campus located at 1230 York Avenue in Manhattan, New York. The scope of the Phase II study was based on the results of a Phase I Environmental Site Assessment (ESA) conducted by AKRF in May 2007, which was part of a the Environmental Assessment Statement (EAS) being conducted for the site. The Phase II study was conducted in accordance with AKRF's New York City Department of Environmental Protection (NYCDEP)-approved Sampling Protocol and site-specific Health and Safety Plan (HASP) and the NYCDEP comments/recommendations letter dated May 9, 2007. The investigation included the collection of soil samples for laboratory analysis at three locations on the campus where construction is proposed: the proposed sites of the Collaborative Research Center; the Laboratory Animal Research Center (LARC) Annex and Imaging Building; and the Electrical Vault.

Soil encountered during this investigation primarily consisted of uncontrolled fill that was comprised of brown, coarse to fine sand with traces of brick and gravel. At the Electrical Vault (B-12 and B-13), the fill extended to about eight feet below grade and was underlain by brown, coarse to fine sand with traces of clay to a depth of approximately 12 to 14. Below this was decomposed rock consisting of brown to grey mica schist. At the Collaborative Research Center site (B-1 to B-6), the fill encountered from approximately one to two feet below grade was underlain directly by decomposed rock. At the LARC Annex site (B-7 to B-11, and B-14) only uncontrolled fill was observed in the shallow borings extending to four feet below grade. Groundwater was encountered in boring B-12 at a depth of approximately 17 feet below surface grade and in boring B-8 at a depth of approximately six to seven feet below grade. Groundwater was not encountered in any of the other borings advanced at the site as part of this investigation. Refusal on presumed bedrock was encountered at a depth of approximately 2.5 feet below grade in boring B-5; approximately three feet below grade in B-3 and B-4; approximately 4.5 feet below grade in B-1, B-2, and B-6; and approximately 12 feet below grade in B-13. Refusal was not encountered in B-12, which was extended to a depth of 20 feet below grade, and the borings completed at the LARC Annex site, which were extended to a depth of four feet (B-7, B-9 to B-11, and B-14) and eight feet (B-8).

Sixteen discrete soil samples were collected from the 14 soil borings for laboratory analysis. Groundwater was not encountered in any of the six borings (B-1 through B-6) completed at the Collaborative Research Center site and no groundwater sample was collected. Soil sample analytical results were compared to New York State Department of Environmental Conservation (NYSDEC) Part 375 Soil Cleanup Objectives (SCOs) for residential use. The only compounds detected at levels exceeding the SCOs were six common polycyclic aromatic hydrocarbons (PAHs), benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, chrysene, and indeno(1,2,3-cd)pyrene. One or more of these compounds were present at levels slightly exceeding their respective SCOs in the three soil samples B-3-2-3, B-10-2-4, and B-11-2-4, which were collected from the surface fill material. No SVOCs were detected in the soil collected at greater depths in the native soil below the fill (B-12-13-15 and B-13-10-12). Lead was found in one soil sample B-3-2-3 at a concentration of 453 ppm, slightly above its SCO of 400 ppm.

Based on the nature and concentration of the compounds detected and the lack of significant evidence of contamination in the soil samples (i.e., staining, odors, or PID readings), the levels of SVOCs detected in the samples were likely attributable to the urban fill present at shallow depths at the site and are not indicative of environmental contamination from historic on-site spills or releases.

Redevelopment of the subject property includes construction at three onsite locations: the proposed sites of the Collaborative Research Center; the LARC Annex and Imaging Building; and the Electrical Vault. The proposed Collaborative Research Center is a six-story building, with three subgrade levels, to be constructed in the below-grade courtyard between Theobald Smith Hall and Flexner Hall near the

northeast corner of the campus, with a one-story section on the west side of Theobald Smith Hall. The LARC Annex and Imaging Building, a four-story and one-story addition, is proposed to be constructed on the east side of the existing LARC, which is located near York Avenue between East 63<sup>rd</sup> and East 64<sup>th</sup> Streets. A new sub-grade electrical vault is proposed to be constructed under the south campus parking lot, located near York Avenue between East 65<sup>th</sup> and East 66<sup>th</sup> Streets.

It is not anticipated that dewatering will be necessary as part of site development, although some soil disturbance will be required. Surface soil at the subject property primarily comprises urban fill, exhibiting above-background levels of organic compounds and lead. Any soil excavated as part of any future site development activities will be managed in accordance with all applicable regulations. Soil intended for off-site disposal will be tested in accordance with the requirements of the receiving facility. Transportation of material leaving the site for off-site disposal will be in accordance with federal, state and local requirements covering licensing of haulers and trucks, placarding, truck routes, manifesting, etc.

If development plans change and dewatering is required, regulatory protocols may require pretreatment of groundwater pumped from the site before discharge into the municipal sewer system. Discharge water must meet the NYCDEP criteria for effluent to municipal sewers, in accordance with the NYCDEP Bureau of Wastewater Treatment (BWT) Wastewater Quality Control Permit. Following on-site treatment, the water would be disposed of in the City sewer in accordance with the appropriate permit.

To minimize the potential for impacts to the community and construction workers, all demolition, excavation, and construction work involving soil disturbance should be performed under a site-specific environmental construction health and safety plan (CHASP). The CHASP, which will be approved by the NYCDEP, will be based on the results of this Phase II study and will specify appropriate testing and/or monitoring (e.g., real-time dust and organic vapor air monitoring) and detail appropriate measures to be implemented (including notification of regulatory agencies) if underground storage tanks, soil and groundwater contamination, or other unforeseen environmental conditions are encountered.

To address environmental conditions that may be encountered during proposed construction and development activities, a Remedial Action Plan (RAP) will be prepared. The purpose of this RAP is to present measures for managing on-site soil and groundwater and removing any potential unknown buried drums, petroleum storage tanks, or other storage containers in accordance with applicable federal, state, and local regulations (including notification of regulatory agencies). Soil management includes guidelines for temporary on-site stockpiling and off-site transportation and disposal. The RAP will be submitted to NYCDEP for review and approval.

Based on the results of this investigation, no further investigation is warranted at this time.

**Table Notes**  
**Rockefeller University**  
**New York, New York**  
Soil and Groundwater Tables Analytical Results

**Soil Notes:**

Samples analyzed by EPA (Environmental Protection Agency) method 8260 & 8270.  
Part 375 refers to 6 NYCRR Subpart 375-6 Remedial Program Soil Cleanup Objectives

**Flags:**

NS - No soil clean-up objective listed  
mg/kg - milligrams per kilogram = parts per million (ppm)  
ug/kg - micrograms per kilogram = parts per billion (ppb)  
U - compound not detected  
B - analyte was detected in associated blank  
H - concentration was calculated using manual alternate peak selection  
M - concentration calculated using manual integration  
N - MS/MSD spike recovery exceeds control limits  
\* - MS/MSD quality control exceeds control limits  
J - Data indicates the presence of a compound that meets the identification criteria.  
The result is less than the quantitation limit but greater than zero. The concentration given is an approximate value.  
NA - Not Analyzed  
TICs - tentatively identified compounds.  
E - Value exceeds calibration range  
D -  
PG - The percent difference between the original and confirmation analysis is greater than 40%.

**Groundwater Notes:**

NYSDEC Class GA Ambient Standard = New York State Department of Environmental Conservation Technical and Operational Guidance Series (1.1.1): Class GA Ambient Water Quality Standards and Guidance Values and Groundwater Effluent Limitations.  
CT-GWPC - CTDEP Groundwater Protection Criteria

**Flags:**

\*LCS, LCD, MD: Batch QC exceeds the upper or lower control limits.  
B = (Inorganic flag) Result is less than the CRDL/RL, but greater than or equal to the IDL/MDL.  
B = (organic flag) Compound was found in the blank and sample.  
J = Result is an estimated value below the reporting limit or a tentatively identified compound (TIC).  
M = Manually integrated compound.  
N = MS, MSD: Spike recovery exceeds the upper or lower control limits.  
U = Analyte not detected above the MDL.  
UJ = The compound was analyzed for, but not detected. The sample quantitation limit is an estimated quantity due to variance.  
JN = Analyte is presumptively present at an approximated quantity.

**Laboratory analytical methods included the following:**

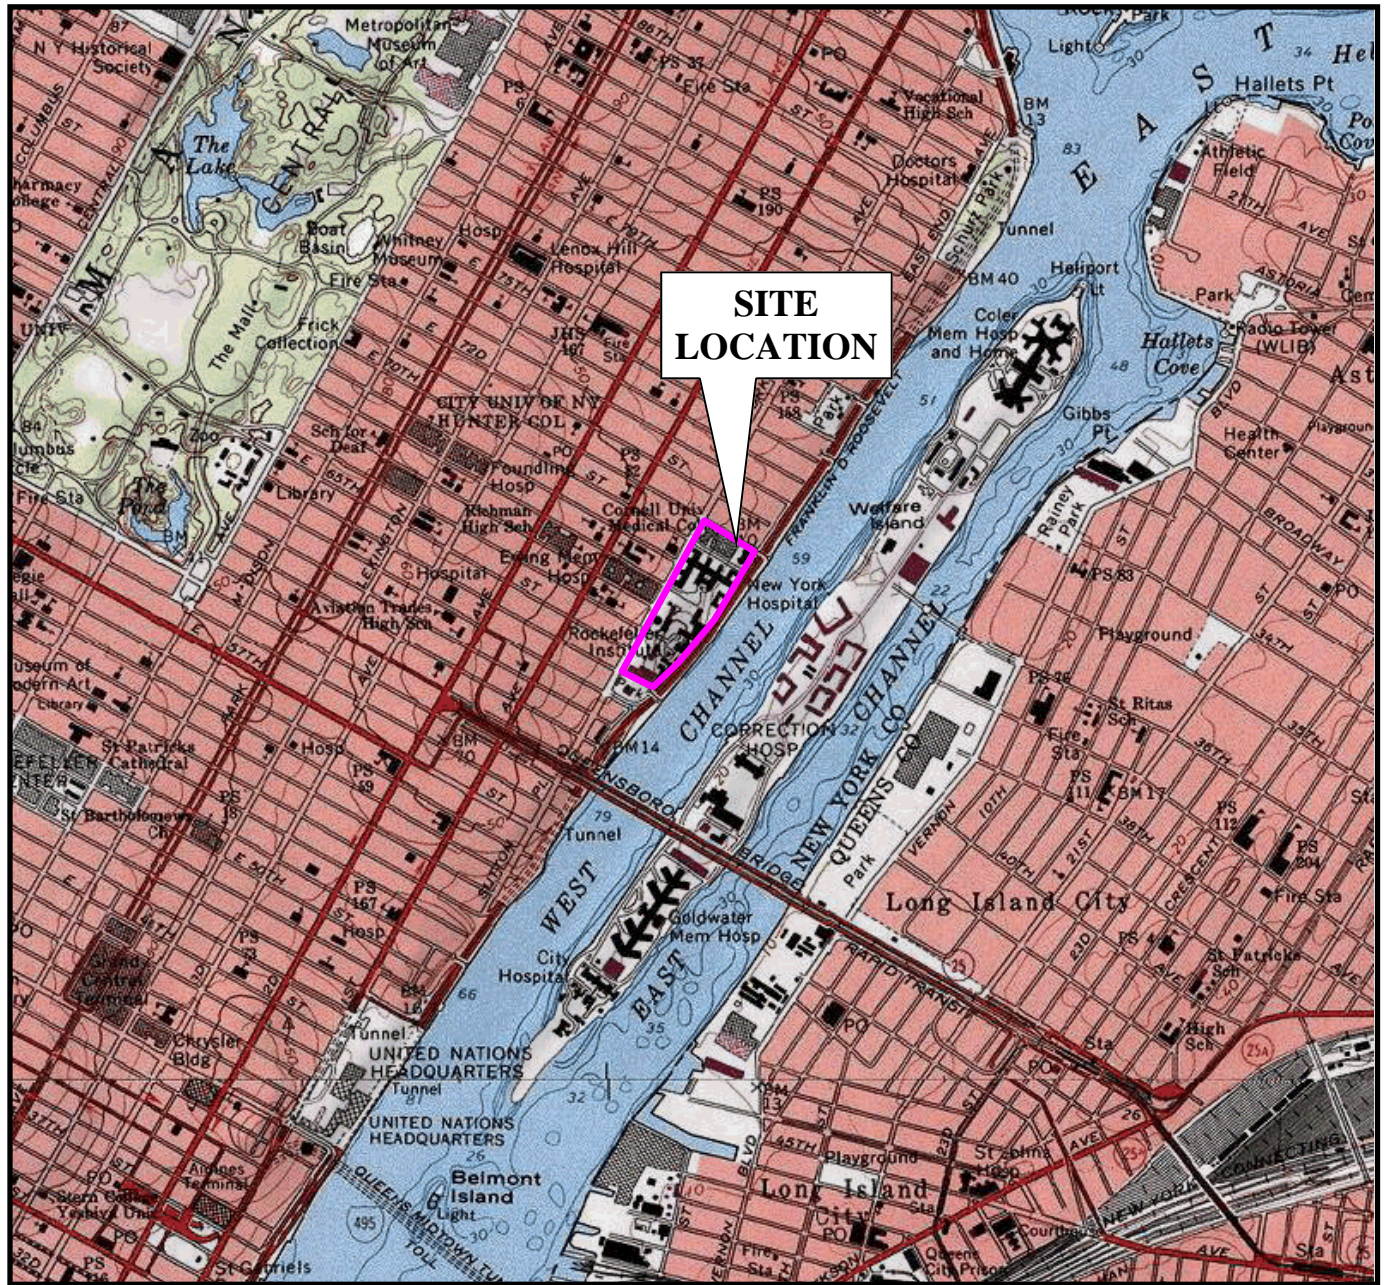

TCL VOCs using EPA Method 8260  
TCL SVOCs using EPA Method 8270 (base neutral compounds only)  
PCBs using EPA Method 8082  
Pesticides using EPA Method 8081  
TAL metals using EPA Methods 6010B and 7470A  
General groundwater chemistry (non-redundant Part 360 parameters) using EPA Methods 160, 300-series and 400 series

**Abbreviations:**

\*\*\* TDS standard applies only in the counties of Nassau and Suffolk.  
\* A standard of 500 ppb applies to the sum of iron and manganese concentrations.  
µg/L = micrograms per liter, or parts per billion  
LCD = Laboratory Control Standard Duplicate  
LCS = Laboratory Control Standard with reagent grade water or matrix free from the analyte of interest  
MDL = Method Detection Limit  
MS = Matrix Spike  
MSD = Matrix Spike Duplicate  
ND = Not detected  
RL = Reporting limit

## Report of Analysis

Client: AKRF INC

Date Collected: 05/23/07

Project ID: Rockefeller University # 10757

Date Received: 05/23/07

Customer Sample No.: B-3-2-3

Lab Sample ID: Y2852-03

Test: PCB

SDG ID: Y2852

Analytical Method: EPA SW-846 8082

% Moisture: 10.00

Result Type: Final

Datafile: P6004237

## Report of Analysis

Client: AKRF INC

Date Collected: 05/23/07

Project ID: Rockefeller University # 10757

Date Received: 05/23/07

Customer Sample No.: B-5-1-2

Lab Sample ID: Y2852-08

Test: SVOC-TCL BNA -20

SDG ID: Y2852

Analytical Method: EPA SW-846 8270

% Moisture: 3.00

Result Type: Final

Datafile: BA032200

| CAS Number | Parameter                   | Results | Qualifier | Units | DL   | RT/RL | DF | DIL/R |
