Re: Phase I Environmental Site Assessment  
*Rockefeller University New Laboratory Building – New York, New York*  
*AKRF Project Number 11609*

Dear Mr. Candler:

AKRF, Inc. is pleased to submit this Phase I Environmental Site Assessment Report for the above-referenced property. This report includes the findings of a reconnaissance of the property, an evaluation of readily available historical information, and selected environmental databases and electronic records. AKRF, Inc. met the requirements of American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-05 unless noted otherwise in Section 8.0: "Limitations and Data Gaps."

We appreciate the opportunity to provide you with our services. If you should have any questions or comments regarding the enclosed report, please do not hesitate to contact us.

Sincerely,  
AKRF, Inc.

A handwritten signature in blue ink, appearing to read 'Marcus Simons'.

## EXECUTIVE SUMMARY

AKRF, Inc. (AKRF) was retained by The Rockefeller University to perform a Phase I Environmental Site Assessment (ESA) of a Property consisting of portions of the Rockefeller University campus (Tax Block 1480, Lot 10) and the east-adjacent FDR Drive in Manhattan. The general location of the Property is shown on Figure 1, with the Property boundaries in Figure 2.

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, this practice are described in Section 8.0. The term “Recognized Environmental Condition” means the presence or likely presence of hazardous substances or petroleum at the property, including the ground, groundwater, or surface water at or under the property.

At the time of AKRF’s reconnaissance, the Property was occupied by asphalt-paved walkways, landscaped areas, a parking lot with a concrete shelter structure and a construction trailer staging area on the Rockefeller University campus, and by a portion of FDR Drive adjacent to the campus. The main Rockefeller University campus was adjacent to the Property. A pedestrian esplanade was east-adjacent to the FDR Drive portion of the Property, with the East River beyond. The greater surrounding area included residential, office, commercial and institutional (university, hospital, school and church) uses.

This assessment revealed the following, including evidence of Recognized Environmental Conditions (the first two bullets) and other environmental concerns that are not considered RECs in accordance with ASTM E1527-05:

- The Property was historically occupied by vacant land, a swimming school, a stone yard with a machine shop, part of a hospital and a portion of a street. The eastern edge of the Property was filled with materials of unknown origin in the early 20<sup>th</sup> century. By the early 20<sup>th</sup> century, the Property was occupied by portions of the Rockefeller University campus, including an animal house, a “horse yard” and vacant land in the eastern portion, and a recreation area in the western portion. By 1928, part of the Rockefeller University Power House was shown on historical land use maps in the western portion of the Property; the reconnaissance indicated that the Power House is located below Property grade and extends beneath several adjacent buildings. FDR Drive was constructed in the eastern portion of the Property by 1951. Historical land use maps showed the eastern portion of the Property as vacant land in 2004, and showed the western portion as a parking lot with a parking shelter built in 1958.
- The surrounding area was mixed-use, with residential, educational, medical and commercial uses shown in the early 20<sup>th</sup> century, and development of the Rockefeller University campus and nearby large hospitals and research facilities throughout the 20<sup>th</sup> century. The regulatory database identified The Rockefeller University and other nearby hospitals and research facilities as generators of hazardous waste. Information provided by The Rockefeller University representatives indicated that on-campus laboratories produce chemical, biological and radioactive waste, whose disposal is managed by the Rockefeller University Department of Laboratory Safety and Environmental Health in accordance with applicable regulations. Laboratories and/or maintenance facilities with chemical storage were reportedly located in some buildings which may be connected to the proposed new laboratory building.
- A Subsurface (Phase II) Investigation was conducted by AKRF on the Rockefeller University campus in 2007. The investigation was conducted in preparation for renovation and new construction in portions of the campus, and included the collection of soil samples for laboratory analysis for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, PCBs, and

Target Analyte List (TAL) metals. No samples were collected from the Property, but the nearest sampling locations were located west of the Property at the current location of the Collaborative Research Center (CRC). Laboratory analytical results indicated only minor soil contamination typical of urban fill, with no evidence of a spill or release.

- During the reconnaissance, no evidence of petroleum storage tanks was noted on the Property. Regulatory listings and interviews indicated that nine petroleum aboveground storage tanks (ASTs) and one underground storage tank (UST) were present elsewhere on the Rockefeller University campus. Five ASTs were located in close proximity to the Property and were noted to be in good condition with no evidence of a release. All previously reported spills were minor and had been closed (i.e., cleaned up) to the satisfaction of the NYS Department of Environmental Conservation. Based on these observations, regulatory listings and tank locations, The Rockefeller University tanks are unlikely to have affected subsurface conditions beneath the Property.
- Lead-based paint may be present on the on-site parking shelter. Some peeling paint was noted on the shelter ceiling. Lead-based paint may also be present in existing building areas that would be disturbed for connections to the proposed laboratory building. Painted surfaces in typical interior areas of buildings that may be connected to the laboratory were observed to be in good condition.
- No suspect asbestos-containing materials (ACM) were noted on the Property. However, suspect ACM (e.g., electrical equipment components and pipe insulation) may be present in buried utilities beneath the Property. Suspect ACM may also be present in existing building areas that would be disturbed for connections to the proposed laboratory building. Suspect ACM observed in the inspected portions of the Hospital and Nurse Buildings and the Power House included thermal pipe insulation, 12-inch by 12-inch vinyl floor tiles and associated mastic, 24-inch by 24-inch suspended ceiling tiles, and window caulking and glazing in the Hospital Building. The observed suspect ACM were in good condition. Asbestos surveys and abatements have reportedly been conducted as part of renovation activities in Smith Hall/Smith Hall Annex and Flexner Building.
- No suspect polychlorinated biphenyl (PCB) - containing equipment was noted on the Property. However, suspect PCB-containing electrical utilities (e.g., feeder lines) may be present beneath the Property. In addition, suspect PCB-containing electrical equipment and/or fluorescent lighting fixtures may be present in existing building areas that would be disturbed for connections to the proposed laboratory building.

## **RECOMMENDATIONS**

- Hazardous waste produced by The Rockefeller University is managed by the Rockefeller University Department of Laboratory Safety and Environmental Health in accordance with the applicable regulations. However, there is some potential for (more likely historical) releases from The Rockefeller University or other nearby hospital/research facilities to have affected subsurface conditions beneath the Property. Fill materials of unknown origin may also be present beneath the Property, although past testing in other portions of the Rockefeller University campus identified no significant soil contamination associated with fill materials. AKRF recommends a subsurface investigation involving the collection and laboratory analysis of subsurface samples from areas where excavation is proposed. It is possible that this investigation may uncover evidence of a petroleum spill or other situation reportable to NYSDEC and/or other regulatory agencies.
- During any future subsurface disturbance, excavated soil should be handled and disposed of in accordance with applicable regulatory requirements. If dewatering is necessary for the proposed

construction, water should be discharged in accordance with New York City Department of Environmental Protection (NYCDEP) requirements.

- Unless information exists that suspect ACM do not contain asbestos, prior to any activities with the potential to disturb suspect ACM, an asbestos survey of the areas to be disturbed should be conducted and any ACM that would be disturbed should be removed and disposed of in accordance with local, state and federal requirements.
- Any activities with the potential to disturb lead-based paint must be performed in accordance with applicable requirements (including federal Occupational Safety and Health Administration regulation 29 CFR 1926.62 - *Lead Exposure in Construction*).
- Unless there is labeling or test data indicating that suspect PCB-containing electrical equipment and fluorescent lighting fixtures do not contain PCBs, and that fluorescent lighting bulbs do not contain mercury, if disposal is required, it should be conducted in accordance with applicable federal, state and local requirements.
- Any chemicals, biological waste and radioactive waste requiring disposal in areas that would be disturbed by the proposed project should be properly disposed of in accordance with applicable requirements.

## 1.0 INTRODUCTION

AKRF, Inc. (AKRF) was retained by The Rockefeller University to perform a Phase I Environmental Site Assessment of a Property consisting of portions of the Rockefeller University campus (Tax Block 1480, Lot 10) and the east-adjacent FDR Drive in Manhattan (see Figures 1 and 2).

At the time of AKRF's reconnaissance, the Property was occupied by asphalt-paved walkways, landscaped areas, a parking lot with a concrete shelter structure and a construction trailer staging area on the Rockefeller University campus, and by a portion of FDR Drive adjacent to the campus. The main Rockefeller University campus was adjacent to the Property. A pedestrian esplanade was east-adjacent to the FDR Drive portion of the Property, with the East River beyond. The greater surrounding area included residential, office, commercial and institutional (university, hospital, school and church) uses.

The scope of services for this assessment was in conformance with ASTM Standard E1527-05 (*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*). Any exceptions to, or deletions from, this practice are described in Section 8.0. The scope included the following:

- Observations of the Property (reconnaissance) to identify potential sources or indications of hazardous substances, including: above-ground storage tanks (ASTs); underground storage tanks (USTs); tank vents and fill ports; transformers and other items that could contain polychlorinated biphenyls (PCBs), drums or areas where hazardous materials were used, stored, or disposed; stained surfaces and soils; stressed vegetation, leaks, and odors. In addition, neighboring properties were viewed, but only from public rights-of-way, to identify similar concerns.
- Readily available geological and groundwater (hydrogeological) information was evaluated to assist in determining the potential for contamination migration within, from, and onto the Property.
- The reconnaissance of the Property included preliminarily identifying visible suspect asbestos-containing materials (ACMs) and the potential for lead-based paint. However, no samples were collected or analyzed.
- A state database of radon concentrations was used to determine whether indoor radon levels in the general area (data are by county) generally comply with United States Environmental Protection Agency (USEPA) guidelines.
- Historical fire insurance maps for the Property and adjacent properties were reviewed to evaluate historic land uses.
- The following federal regulatory databases were reviewed to determine the regulatory status of the Property and other properties within the ASTM-defined radii: National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF) and the USEPA Civil Enforcement Docket. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.
- The following state regulatory databases were reviewed to determine the regulatory status of the Property, adjacent properties, and properties within a predetermined study area; the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State

Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Brownfield Sites; and Historic Utility Sites.

- A review of New York City Fire Department (obtained as part of the database search) and online Buildings Department records for the Property was conducted to obtain information likely to be pertinent to this assessment.

## **2.0 PHYSICAL SITE DESCRIPTION**

On September 7, 2012, Ms. Asya Bychkov of AKRF conducted a reconnaissance of the eastern portion of the Property (the site of the future laboratory). Neighboring properties were also viewed, but only from public rights-of way. Mr. George Candler, the Associate Vice President for Planning and Construction, and Mr. Frank Schaefer, Director of Laboratory Safety and Environmental Health at The Rockefeller University, provided access to the Property and answered pertinent questions. The weather was clear and approximately 80 °F, the visibility good, and the premises adequately illuminated.

On September 26, 2012, Ms. Amy Diehl Crader of AKRF conducted a reconnaissance of the western portion of the Property (the site of the future recreational building). Neighboring properties were also viewed, but only from public rights-of way. Mr. Candler provided access to the Property and answered pertinent questions. The weather was cloudy and approximately 75 °F, the visibility good, and the premises adequately illuminated.

Photographs from the reconnaissance are included in Appendix A.

### **2.1 General Site Conditions**

At the time of the reconnaissance, the eastern portion of the Property was occupied by asphalt-paved or landscaped areas on the Rockefeller University campus and an asphalt-paved portion of FDR Drive east-adjacent to the campus. Portions of the on-campus areas were surrounded by construction fencing for renovations to existing buildings. FDR Drive was approximately 30 to 45 feet below the grade of the campus, separated from it by a stone retaining wall which incorporated the walls of several buildings adjacent to the eastern portion of the Property.

The western portion of the Property was occupied by an asphalt-paved parking area partially covered by a concrete shelter. The shelter roof was occupied by a seating and walkway area with a stone tile floor, and a tennis court surrounded by chain-link fencing. The shelter ceiling had some peeling paint. The western portion of the parking area was occupied by construction trailers for ongoing Rockefeller University construction/renovation projects. Patched asphalt noted in the trailer parking area appeared to be associated with past pavement repair. A small storage cage for gas cylinders and a dumpster containing recyclable trash (paper and cardboard) were noted in the trailer parking area.

Mr. Candler indicated that the Smith Hall/Smith Hall Annex, Welch Hall, Hospital and Nurse Buildings, and/or the Power House may be connected to the new laboratory building (most likely via sub-grade levels). However, while the locations of these potential connections have not been finalized, only minimal disturbance of existing buildings is anticipated. During the September 7 reconnaissance, portions of the Hospital and Nurse Buildings and the Power House anticipated to be disturbed for connections to the new laboratory building were toured.

The Power House, located underground beneath a portion of the Property, the Hospital Building and several buildings further east, provided steam heat for the entire Rockefeller University campus and included a chiller plant. Chemical storage observed in the Power House included

storage of gas cylinders and 55-gallon drums of water treatment chemicals, waste oil and glycol for the chiller plant. No odors or staining were noted in the chemical storage areas. No petroleum storage tanks were located on the Property or in the portion of the Power House underlying the Property. The nearest tanks to the Property were a 275-gallon diesel aboveground storage tank (AST) in the Hospital Building and four 18,500 to 20,000-gallon fuel oil ASTs in the Power House, which were observed and noted to be in good condition. Mr. Candler and Mr. Schaefer indicated that the Nurse Building also had maintenance areas with chemical storage, including a heating, ventilation and air-conditioning (HVAC) shop for maintenance of Freon-containing equipment, and that laboratories were historically located in the Nurse Building and are currently present in Flexner Hall and Smith Hall/Smith Annex.

## **2.2 Topography and Hydrogeology**

Based on a survey provided by Langan Engineering and Environmental Services (Langan), the western portion of the Property lies at an elevation of approximately 33 feet above Manhattan Borough Datum (MBD). The eastern portion of the Property consists of an on-campus area (with an elevation of approximately 35 to 50 feet MBD) separated by a retaining wall from the on-site portion of FDR drive (with an elevation of approximately 6 to 6.5 feet MBD). MBD is approximately 2.75 feet above the National Geodetic Vertical Datum of 1929 (an approximation of mean sea level). The campus generally slopes up toward the east. However, based on U.S. Geological Survey mapping, surface topography in the greater surrounding area slopes down to the east along East 68th Street. The survey indicated tunnels on-campus beneath the eastern portion of the Property, as shown on Figure 2. The southern portion of the proposed laboratory building is located over a portion of the existing Power House.

Based on USGS mapping, bedrock elevation beneath the Property is approximately 20 feet MBD. Previous studies summarized in Section 7.0 identified the presence of fill materials of unknown origin beneath the Rockefeller University campus. The previous studies and information provided by Mr. Robert Garino of Langan indicated that bedrock depth beneath the Rockefeller University campus ranges from approximately 2 to 23 feet below grade, and that bedrock is expected approximately 30 feet below grade in the FDR Drive area.

The previous studies indicated that groundwater perched on shallow bedrock has been encountered beneath the Rockefeller University campus. Groundwater beneath FDR Drive is expected to be shallow due to its proximity to East River. Groundwater most likely flows in an approximately easterly direction toward the East River but is likely tidally influenced. However, actual groundwater flow can be affected by many factors, including past filling activities, underground utilities and other subsurface openings or obstructions such as basements, bulkheads, tunnels and underground parking garages, bedrock geology, tidal fluctuations, and other factors beyond the scope of this study. Groundwater in Manhattan is not used as a source of potable water.

## **2.3 Storage Tanks**

### **2.3.1 Underground Storage Tanks (USTs)**

During the reconnaissance, no evidence, such as vent pipes, fill caps, or concrete patches, was observed that would indicate USTs are or were present on the Property. The review of regulatory databases and computerized NYC Fire Department records did not reveal any records relating to USTs on the Property. Since no specific address exists for the Property, no Buildings Department records were identified for the Property.

Off-site USTs are discussed in Section 5.2.2.

### **2.3.2 Aboveground Storage Tanks (ASTs)**

During the reconnaissance, no evidence, such as tanks or vaults likely to contain tanks, vent pipes or fill caps was observed during the reconnaissance to indicate that ASTs are or were present on the Property. The review of regulatory databases and computerized NYC Fire Department records did not reveal any records relating to ASTs on the Property. Since no specific address exists for the Property, no Buildings Department records were identified for the Property.

Regulatory records identified nine ASTs on the Rockefeller University campus. Interviews and the reconnaissance indicated that these ASTs are all located off-site. The nearest ASTs to the Property were a 275-gallon diesel AST in the Hospital Building, west-adjacent to the western portion of the Property, and four 18,500 to 20,000-gallon fuel oil ASTs in the Power House, approximately 175 feet west of the Property beneath the Rockefeller Research Building (RRB). The ASTs discussed in Section 2.1 above are also discussed in Section 5.2.2, as are other off-site ASTs.

### **2.4 Polychlorinated Biphenyls (PCBs)**

Until 1979, polychlorinated biphenyls (PCBs), which provided beneficial insulating properties, were manufactured for use in a wide variety of products, primarily in electrical equipment such as transformers, capacitors, fluorescent light fixtures (especially ballasts), and voltage regulators, but also in hydraulic fluids and some other products.

No suspect PCB-containing equipment was noted on the Property. However, suspect PCB-containing electrical utilities (e.g., feeder lines) may be present beneath the Property. In addition, suspect PCB-containing electrical utilities and/or fluorescent lighting fixtures may be present in existing building areas that would be disturbed for connections to the proposed laboratory building.

### **2.5 Lead-Based Paint**

After 1977, the use of lead-based paint inside the interiors of commercial structures was also restricted and its use elsewhere became much less common, but lead-based paint may still sometimes be used outdoors. Lead-based paint can present a hazard, particularly to children and especially when it is in a deteriorating condition.

Based on the age of the parking shelter, lead-based paint may be present on this structure. Painted surfaces on this structure were noted to be in good to poor condition, with some peeling paint. Lead-based paint may also be present in existing building areas that would be disturbed for connections to the proposed laboratory building. Painted surfaces in typical interior areas of buildings that may be connected to the laboratory were observed to be in good condition. At the time of the reconnaissance, the Property did not include residential occupancy, child care facilities or other facilities where the extended presence of children would be expected.

Activities (such as renovation or demolition) with the potential to disturb lead-based paint are subject to a variety of requirements, including US Occupational Safety and Health Administration regulation 29 CFR 1926.62 (Lead Exposure in Construction).

## 2.6 Utilities

The Property and the remainder of the Rockefeller University campus were supplied with electricity and connected to the municipal water supply and combined sewer systems. No storm drains were noted on the Property.

## 2.7 Waste Management and Chemical Handling

A small storage cage for gas cylinders and a dumpster containing recyclable trash (paper and cardboard) were noted in the trailer parking area. No other waste or chemical storage was noted on the Property.

Based on observations, interviews, and/or waste management information provided by Rockefeller University staff, several laboratories were located on the Rockefeller University campus. Mr. Candler and Mr. Schaefer indicated that some buildings adjacent to the eastern portion of the Property included laboratories and/or maintenance areas with chemical storage, and that chemicals, biological waste and radioactive waste were produced on-campus. No odors or staining were noted in the chemical storage areas of the Power House, which were toured during the reconnaissance.

Information provided by The Rockefeller University indicated that wastes requiring special disposal are handled and disposed of under the direction of the Rockefeller University Department of Laboratory Safety and Environmental Health as follows:

- All hazardous chemical wastes from Rockefeller University are collected and disposed of through centralized systems. Potentially hazardous chemical wastes are properly containerized and labeled, collected from the laboratories, and held in a chemical waste accumulation area. The wastes are regularly removed by licensed contractors for incineration or disposal off-site. The Rockefeller University is classified by the U.S. EPA as a Large Quantity Generator of hazardous wastes.
- Regulated medical wastes are containerized in accordance with all applicable regulations and labeled and taken to a central collection location, where they are picked up by a permitted hauler for incineration off-site. Aqueous biological waste is chemically disinfected on site and released to the sewer in accordance with applicable regulations. Solid waste from certain operations is autoclaved before removal from the laboratory, but is still shipped as regulated medical waste with a permitted hauler.
- All radioactive wastes with short half-lives (less than or equal to 90 days) are stored until their radioactivity decays to acceptable levels. Solid materials with half-lives greater than 90 days are properly labeled and containerized and transported for off-site disposal at a permitted radioactive waste disposal site. Liquid aqueous waste with half-lives greater than 90 days is released to the sewer in accordance with local regulations and the conditions of the University's radioactive materials license.

## 2.8 Radon

Radon is a colorless, odorless gas most commonly produced by the radioactive decay of certain rocks. According to a New York State Department of Health database, the average level of radon found in basements in Manhattan is 2.15 picocuries/liter, below the USEPA recommended action level of 4.0 picocuries/liter.

### **3.0 ASBESTOS-CONTAINING MATERIALS (ACM)**

Asbestos is a name applied to a group of natural minerals, with particularly good fire resistant and insulation properties. In addition to insulation/fireproofing products, it is also commonly found in vinyl flooring, plaster, sheetrock, joint compound, ceiling tiles, roofing materials, gaskets, mastics, caulks and a range of other products. Materials containing more than one percent asbestos are considered asbestos-containing materials (ACM). ACM are classified as friable or non-friable: friable (e.g., most spray-on fireproofing) ACM more readily release asbestos fibers than non-friable ACM (e.g., vinyl flooring and most roofing materials).

The reconnaissance was conducted by Ms. Asya Kleyn, a New York State-certified asbestos inspector. Visible suspect ACM were noted if they were observed. However, this reconnaissance was not intended to and may not have identified all visible suspect ACM. In addition, suspect ACM may be present in areas not visible during the reconnaissance (e.g., in areas hidden behind walls, under flooring, behind walls, above suspended ceilings, in areas which were inaccessible during the reconnaissance, etc.) The observations made during the reconnaissance do not constitute and cannot substitute for an asbestos survey which is a comprehensive study with laboratory testing. Prior to implementing an activity which could disturb suspect ACM (e.g., renovation or demolition), a NYC-certified asbestos investigator must inspect the areas and conduct testing, as necessary, to determine whether the activity would disturb ACM. Any such ACM must be removed prior to the activity. There are also requirements that all suspect ACM be maintained in good condition regardless of whether they are to be disturbed by a project.

No suspect ACM were noted on the Property. However, suspect ACM (e.g., electrical equipment components and pipe insulation) may be present in buried utilities beneath the Property.

Suspect ACM may also be present in existing building areas that would be disturbed for connections to the proposed laboratory building. Suspect ACM observed in the inspected portions of the Hospital and Nurse Buildings and the Power House included thermal pipe insulation, 12-inch by 12-inch vinyl floor tiles and associated mastic, 24-inch by 24-inch suspended ceiling tiles, and window caulking and glazing in the Hospital Building. The observed suspect ACM were in good condition. According to Mr. Candler and Mr. Schaefer, asbestos surveys and abatements were conducted as part of renovation activities in Smith Hall/Smith Hall Annex and Flexner Building. Copies of the associated records were not provided to AKRF for review. A copy of the Rockefeller University Asbestos Operations and Maintenance Program was provided to AKRF.

### **4.0 ADJACENT LAND USE**

The remainder of the Rockefeller University campus was adjacent to the Property. A pedestrian esplanade was east-adjacent to the eastern portion of the Property, with the East River beyond. The surrounding area included residential, office, commercial and institutional (university, hospital, school and church) uses.

### **5.0 PROPERTY HISTORY AND RECORDS REVIEW**

#### **5.1 Prior Ownership and Usage**

##### **5.1.1 Historical Land Use maps**

Historical insurance maps were reviewed for indications of uses (or other evidence) suggesting hazardous materials generation, usage or disposal on or near the Property.

Specifically, Sanborn Fire Insurance Maps from 1892, 1907, 1922, 1928, 1951, 1976, 1988 and 2004 were reviewed.

#### 1892

The eastern portion of the Property was vacant except for a small swimming school, and was partially located within the East River. The western portion of the Property was occupied by a stone yard with a one-story structures.

The surrounding area was developed with mid-rise buildings with unspecified uses, commercial and manufacturing uses, and institutional uses (schools and a hospital). The current location of the Rockefeller University campus, west-adjacent to the Property, was vacant except for a few buildings with unspecified uses. An ice yard, a wagon yard, a coal house, stables, and a malt house were shown on the block south of the Property. A Consolidated Gas Co. facility with three manufactured gas holders occupied the majority of the block southwest of the Property, across York Avenue (labeled as Avenue A) and East 63<sup>rd</sup> Street.

#### 1907

The eastern portion of the Property was occupied by portions of a one-story children's hospital, the campus of the Rockefeller Center for Medical Research (including vacant campus areas and part of a building labeled "animal house"), and Exterior Street (now the approximate location of the FDR Drive). The western portion of the Property consisted of a three-story stone yard with a machine shop.

A brewery, a wagon repair shop, part of the Rockefeller Center for Medical Research (including the current Founders Hall, labeled as a laboratory), a children's hospital and vacant land occupied the off-site portion of the existing Rockefeller University campus. A Consolidated Gas Co. store yard was shown two blocks south of the Property. Land to the west of York Avenue was more densely developed with dwellings, schools, stone yards and "segars" (possibly cigar) factories. No further significant changes from the 1892 map were noted in the surrounding area.

#### 1922

The Property and surrounding area were shown with a low level of detail due to the scale of the map. No significant changes from the 1907 map were noted.

#### 1928

The Property and surrounding area were shown with a low level of detail due to the scale of the map. The eastern portion of the Property was partially occupied by a structure which appears to be the current Rockefeller University Power House. No further significant changes from the 1922 map were noted.

#### 1951

The eastern portion of the Property was occupied by vacant areas, a horse yard and part of the Power House for the Rockefeller Institute for Medical Research, and by FDR Drive. The western portion of the Property was occupied by a recreation area for the Rockefeller Institute, with a running track and "play sheds".

The Rockefeller Institute for Medical Research was shown to have expanded compared to the 1928 map and included a hospital, laboratories, greenhouses, recreation areas and

open space. Cornell Medical College and the New York Hospital were shown north of the Property across East 68<sup>th</sup> Street. The Memorial Hospital was shown west of the Property across York Avenue, between East 68<sup>th</sup> and East 67<sup>th</sup> Streets. A large factory and a Consolidated Edison (ConEd) facility were shown south of the Property across East 63<sup>rd</sup> Street. A filling station was shown west of the Property across York Avenue, on East 64<sup>th</sup> Street. The former gas holder facility to the southwest was occupied by vacant land, a garage, auto dealerships and offices.

#### 1976

The eastern portion of the Property remained similar to the 1951 map. The western portion of the Property was occupied by a parking lot and a parking shelter built in 1958.

New structures were shown on the Rockefeller Institute for Medical Research campus, which had expanded to occupy the entirety of the existing campus and included laboratories, a hospital, classroom buildings and dormitories. A Rockefeller University dormitory occupied the block south of the Property beyond East 63<sup>rd</sup> Street. New hospital buildings were shown west of the Property beyond York Avenue. No further significant changes from the 1951 map were noted in the surrounding area.

#### 1988

The Property and the surrounding area remained similar to the 1976 map.

#### 2004

The eastern portion of the Property was occupied by vacant portions of the Rockefeller Institute campus. The western portion of the Property remained similar to the 1988 map. No significant changes from the 1988 map were noted in the surrounding area.

To summarize, the Sanborn maps indicated that the Property historically included vacant land, a swimming school, a stone yard with a machine shop, part of a hospital and a portion of Exterior Street. The eastern edge of the Property was filled with materials of unknown origin in the early 20<sup>th</sup> century. By the early 20<sup>th</sup> century, the Property was occupied by portions of the Rockefeller University campus, including an animal house, a “horse yard” and vacant land in the eastern portion, and a recreation area in the western portion. By 1928, part of the Rockefeller University Power House was shown in the western portion of the Property; the reconnaissance indicated that the Power House is located below Property grade and extends beneath several adjacent buildings. The eastern portion of the Property was shown with its current use (vacant land) by 2004; the western portion was shown with its current use (parking and a parking shelter) by 1976.

The surrounding area was mixed-use, with residential, educational, medical and commercial uses shown in the early 20<sup>th</sup> century and development of the Rockefeller University campus and nearby large hospitals and research facilities throughout the 20<sup>th</sup> century. A manufactured gas holder facility, other industrial uses and auto-related facilities (auto repair, sales and filling stations) were historically shown southwest of the Property, but are not likely to have significantly affected subsurface conditions beneath the Property based on their distance and the anticipated groundwater flow direction.

### **5.1.2 Historical Aerial Photographs**

Since historical fire insurance maps were available for the Property (and surrounding area) and these maps included information relating to land use, aerial photographs would,

most likely, not provide additional useful information relevant to the potential for recognized environmental conditions or other environmental concerns. As such, aerial photographs were not reviewed.

#### **5.1.3 Property Tax Files and Zoning Records**

Based on NYC Department of City Planning's Primary Land Use Tax Output (PLUTO) information provided by Toxics Targeting, Inc. of Ithaca, New York, the Rockefeller University campus, including part of the Property, is zoned as R9 and R10 (general residence districts). No block and lot information was identified for the portion of the Property located on FDR Drive.

#### **5.1.4 Recorded Land Title Records**

No title records were provided to AKRF.

#### **5.1.5 Local Street Directories**

City Directories consist of the names of businesses/residents listed at a given address, compiled from city and telephone directories. Since no physical address exists for the Property, no City Directory listings were reviewed. However, information about historical uses of the Property was available from historical land use maps.

### **5.2 Regulatory Review**

Regulatory database information, as shown in Appendix B, was obtained from Toxics Targeting, Inc. of Ithaca, New York. The Introduction of Appendix B includes summaries of the databases searched, their radii around the Property and limitations of the data. The databases searched and associated radii were consistent with ASTM E1527-05.

#### **5.2.1 Federal**

The federal databases searched included the National Priority List (NPL); Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS); Emergency Response Notification System (ERNS); Toxic Chemical Release Inventory System (TRIS); the Permit Compliance System of Toxic Wastewater Discharges (WWD); the Air Discharge Facilities Index (ADF); and the USEPA Civil Enforcement Docket. The federal listing of facilities which are subject to corrective action under the Resource Conservation and Recovery Act (CORRACTS) is discussed with the State databases of RCRA listings.

##### National Priority List (NPL)

The NPL is the USEPA's compilation of some sites that probably require remedial action under the Superfund Program. NPL sites can pose a significant risk of stigmatizing surrounding properties and thus impacting property values.

No NPL sites were identified within a one-mile radius of the Property.

##### Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)

CERCLIS is a compilation of sites which the USEPA has investigated, or plans to investigate, pursuant to the Superfund Act of 1980 (CERCLA). As such, some of these sites may ultimately present concerns and others may not (but could still pose a perceived threat, thus affecting property values).

No CERCLIS sites were identified within a ½-mile radius of the Property.

Emergency Response Notification System (ERNS)

This federal database, compiled by the Emergency Response Notification System, records and stores information on certain reported releases of petroleum and other potentially hazardous substances.

Ten ERNS listings were identified as potentially located on the Property. Three of the listings pertained to a water main break on July 15, 1998, with locations reported as the intersection of East 68<sup>th</sup> Street and York Avenue, York Avenue between East 63<sup>rd</sup> and East 68<sup>th</sup> Streets, and FDR Drive. The break reportedly released asbestos to soil surrounding the broken pipe. Similar asbestos insulation-wrapped water pipe, or other utilities containing suspect ACM, may be located beneath the Property.

Based on listing details, the remaining ERNS listings were for off-site releases that were not likely to affect subsurface conditions beneath the Property.

Toxic Chemical Release Inventory System (TRIS)

The TRIS contains information reported by a variety of industries on their annual estimated releases of certain chemicals.

No TRIS sites were identified within a ⅛-mile radius of the Property.

Permit Compliance System of Toxic Wastewater Discharge (WWD)

This database includes certain sites which discharge wastewater containing potentially hazardous chemicals.

No WWD facilities were reported within a ⅛-mile radius of the Property.

United States Environmental Protection Agency Civil Enforcement Docket

This database tracks civil judiciary cases filed on behalf of the USEPA by the Department of Justice.

One facility was listed in the USEPA's Civil Enforcement Docket within a ⅛-mile radius of the Property. The New York Presbyterian Hospital, located at 525 East 68<sup>th</sup> Street, approximately 340 feet north of the Property, was listed for a violation of the Clean Air Act related to nitrogen oxide discharges. The case was opened in 1998 and concluded with a fine in 1999. Based on the nature of the listing (discharges to air likely related to heating plant operations), this facility is not likely to have affected subsurface conditions beneath the Property.

Air Discharge Facilities Index (ADF)

This federal database includes information on certain air emission sources.

Two Air Discharge Facilities were identified within a ⅛-mile radius of the Property as follows:

- Rockefeller University, located at 1230 York Avenue (potentially including the Property) was listed for potential emissions above applicable major source thresholds of nitric oxide (unknown regulatory compliance status) and nitrogen dioxide (listed twice, once with unknown compliance status and once as being in regulatory compliance).

- New York Presbyterian Hospital, located at 525 East 68<sup>th</sup> Street, approximately 335 feet north of the Property, was listed for potential emissions above applicable major source thresholds of nitrogen dioxide (listed twice, once as being in regulatory compliance and once as being in violation of compliance procedures).

Based on the nature of the listings (discharges to air likely related to heating plant operations), these facilities are not likely to have affected subsurface conditions beneath the Property.

### 5.2.2 State

The state records reviewed included the listings of hazardous material spills (SPILLS); Resource Conservation and Recovery Act Notifiers (RCRA); Chemical Bulk Storage (CBS); Solid Waste Facilities (SWF); Petroleum Bulk Storage (PBS); State Inactive Hazardous Waste Disposal Sites (SHWS); Major Oil Storage Facilities (MOSF); Brownfield Sites; and Historic Utility Sites.

#### New York SPILLS Database

This database includes releases reported to the NYSDEC, including tank test failures (for USTs only) and tank failures.

Seven closed-status spills were reported on the Rockefeller University campus. An approximately 100-gallon leak of hydraulic oil into a concrete elevator pit in Abby Hall was reported in August 2009, and was reportedly contained and cleaned up. Two releases of No. 6 fuel oil (approximately 30 to 40 gallons each) were reported in the Power House in May 2007 and July 2004, respectively, due to operator error. These releases were reportedly contained on concrete and cleaned up. The remaining Rockefeller University releases were less than 30 gallons in size and were reportedly contained and cleaned up. None of the releases appeared to have occurred on the Property.

In addition, 1,363 spills were reported within a ½-mile radius of the Property, including 78 active-status spills and 1,285 closed-status spills. The nearest spill listings with greater potential to impact the Property due to their proximity or presumed upgradient groundwater flow direction are summarized below:

- In July 1998, a release of asbestos to soil from the insulation on a broken water main was reported at the intersection of East 68<sup>th</sup> Street and York Avenue, approximately 55 feet north-northwest of the Property. The water main was reportedly repaired, and the listing was closed in February 2003.
- In February 1993, a spill was reported at Phipps Houses, located at 445 East 68<sup>th</sup> Street, approximately 255 feet north-northwest of the Property. The listing indicated that No. 6 fuel oil was noted in a pit near the building's boiler, possibly due to a fuel line leak. The leak was to be cleaned up and repaired. However, no further information was provided. The spill listing was closed in July 2000.
- A release of approximately 100 gallons of No. 6 fuel oil was reported at NY Hospital at 525 East 68<sup>th</sup> Street, approximately 345 feet north of the Property, in April 1989. The release reportedly occurred due to a tank overfill and was cleaned up, and the spill listing was closed in December 1992.
- A tank overfill in November 1988 resulted in an approximately 200-gallon release of No. 6 fuel oil at NY Hospital at East 71<sup>st</sup> Street, approximately 345 feet north of the

Property. According to the listing, the spill was contained. No further information was provided. The listing was closed two days after it was reported.

- In April 1992, an approximately 100-gallon spill of No. 6 fuel oil was reported at 1175 York Avenue, approximately 570 feet west-southwest of the Property. The spill reportedly entered a municipal sewer, and was pumped out. The listing was closed the day it was reported.

Based on listing details and status, distance and anticipated groundwater flow direction, neither the Rockefeller University spills nor other spills reported in the surrounding area are likely to have affected subsurface conditions beneath the Property. The spill listing reported at East 68<sup>th</sup> Street and York Avenue indicated that asbestos-containing materials may be present beneath the Property. Details from all spills are included in Appendix C.

#### Resource Conservation and Recovery Act (RCRA) Notifiers Listings

This database lists sites which have filed notification forms regarding hazardous waste activity, including: treatment, storage, and disposal facilities (TSDs); small-quantity (SQG) and large-quantity generators (LQG); and transporters regulated under RCRA. The discussion below includes any CORRACTS listings of facilities which are subject to corrective action under RCRA.

No TSD facilities were identified within a ½-mile radius of the Property. One CORRACTS site was identified within a one-mile radius of the Property. Based on its location more than 0.4 miles to the east-southeast across the intervening East River, this facility is not expected to have affected the Property.

The Rockefeller University, with an address of 1230 York Avenue, was listed as an LQG of various hazardous waste, including: laboratory chemicals; heavy metal wastes; ignitable, reactive and corrosive solid waste; spent halogenated and non-halogenated solvents; chloroform; cyanide; and PCB-contaminated solids between 1983 and 2012. Three RCRA violations were reported in 1992, 2006 and 2011, with returns to compliance within a month of each violation.

In addition, thirty-eight RCRA Generators/Transporters were reported within a ¼-mile radius of the Property. The nearest listings with some potential to affect the Property, based on location and/or nature of the listing, are given as follows:

- Weill Cornell Medical College and New York Presbyterian Hospital, both located at 1300 York Avenue, approximately 290 feet north of the Property, were listed as LQGs of various hazardous waste, including: laboratory chemicals; heavy metal wastes; ignitable, reactive and corrosive solid waste; spent halogenated and non-halogenated solvents; trichloroethylene; chloroform; cyanide; and PCB-contaminated solids between 1982 and 2012. Six RCRA violations were reported for New York Presbyterian Hospital in 2006, with returns to compliance within a year of each violation.
- Memorial Sloan Kettering Cancer Center, located at 1275 York Avenue, approximately 340 feet northwest of the Property, was listed three times as an LQG of various hazardous waste, including: laboratory chemicals; heavy metal wastes; ignitable, reactive and corrosive solid waste; spent halogenated and non-halogenated solvents; chloroform; cyanide; electroplating waste; and PCB-contaminated solids and oil between 1981 and 2012. Two RCRA violations were reported in 1985 and

2003, with returns to compliance within a year of each violation. Memorial Sloan Kettering and NYC Blood Center, located at the same address, was listed as an SQG of various hazardous waste, including: laboratory chemicals; heavy metal wastes; ignitable, reactive and corrosive solid waste; spent halogenated and non-halogenated solvents; chloroform; and cyanide between 2006 and 2010.

As noted in Section 2.7, hazardous waste produced by The Rockefeller University is managed by the Rockefeller University Department of Laboratory Safety and Environmental Health in accordance with applicable regulations. However, there is some potential for (historical) releases from The Rockefeller University and other facilities identified above to have affected subsurface conditions beneath the Property. The remaining facilities are unlikely to have affected the Property due to the nature of the listings and/or their distance and the anticipated groundwater flow direction.

#### Chemical Bulk Storage (CBS) Database

The New York CBS is a list of facilities that store regulated non-petroleum substances in above-ground tanks with capacities greater than 185 gallons and/or in underground tanks of any size.

No CBS facilities were identified within a 1/8-mile radius of the Property.

#### Solid Waste Facilities (SWF)

This database includes certain landfills, incinerators, transfer stations, recycling centers, and other sites which manage solid waste.

One Solid Waste Facility was identified within a 1/2-mile radius of the Property. Based on its location across the intervening East River, this facility is not expected to have affected the Property.

#### Petroleum Bulk Storage (PBS) Database

This database lists facilities that registered having either aboveground or underground petroleum tanks with total storage exceeding 1,100 gallons. Facilities with more than 400,000 gallons appear on the Major Oil Storage Facilities (MOSF) database (see below).

Fourteen PBS facilities were identified within a 1/8-mile radius of the Property. Details of the nearest facilities are given in Table 1.

**Table 1**  
**Area Petroleum Bulk Storage Facility Data**

Location	Capacity (gallons)	Product Stored	Status	Distance/Direction from Property
The Rockefeller University 1230 York Avenue	20,000 AST 20,000 AST 18,500 AST 18,500 AST 4x 275 AST 1,000 UST 3,000 AST	No. 4 Fuel Oil No. 6 Fuel Oil No. 4 Fuel Oil Diesel Diesel Diesel Diesel	In Service	Adjacent to Property
Phipps House 445 East 68 <sup>th</sup> Street	15,000 UST	Empty	Closed In Place	255 feet/north-northwest

**Table 1**  
**Area Petroleum Bulk Storage Facility Data**

Location	Capacity (gallons)	Product Stored	Status	Distance/Direction from Property
New York Presbyterian Hospital 525 East 68 <sup>th</sup> Street	4x 21,000 AST	No.2 Fuel Oil	Closed-Removed	350 feet/north
	2x 21,000 AST	Diesel	Closed-Removed	
	60 AST	No.2 Fuel Oil	Closed-Removed	
	240 AST	No.2 Fuel Oil	Closed-Removed	
	4x 20,000 UST	No.2 Fuel Oil	In Service	
	3x 20,000 UST	Diesel	In Service	
	2x 275 AST	Diesel	In Service	

Notes: AST – above-ground storage tank  
UST - underground storage tank

Based on interviews and information provided by The Rockefeller University representatives, none of the on-campus tanks were located on the Property. The nearest on-campus tanks to the Property (a 275-gallon AST in the Hospital Building and four 18,500 to 20,000-gallon ASTs in the Power House) were observed during the reconnaissance and appeared to be in good condition, with no evidence of leakage or staining. The Rockefeller University UST was reportedly located approximately 450 feet southwest of the eastern portion of the Property. The Rockefeller University representatives indicated that on-campus tanks are operated in accordance with a Spill Prevention, Countermeasure and Control Plan (SPCC), and provided the findings of an inspection of the four Power House ASTs in November 2011, which indicated that the tanks and associated piping were in good condition with no evidence of a release. Based on the reconnaissance, the type and location of on-campus tanks, and information provided by The Rockefeller University, these tanks are not expected to have affected subsurface conditions beneath the Property.

The NYSDEC SPILLS database identified no spills with the potential to affect subsurface conditions beneath the Property at Rockefeller University or the other above facilities. However, potential undetected releases from Phipps House and New York Presbyterian Hospital may have affected the Property due to their proximity. Details of the remaining PBS facilities located within 1/8 mile of the Property are included in Appendix C.

*State Inactive Hazardous Waste Disposal Site Registry (SHWS)*

This program (also known as State Superfund) lists information regarding a variety of sites likely requiring cleanup.

Two State Inactive Hazardous Waste Disposal Sites were reported within a one-mile radius of the Property. Based on their location more than 0.6 miles to the east-southeast across the intervening East River, these facilities are not expected to have affected the Property.

*State Hazardous Substance Waste Disposal Site Study (SHSWDS)*

This database tracks certain sites that were not listed on SHWS, but may still require investigation and/or cleanup.

No SHSWDSs were identified within a 1/2-mile radius of the Property.

*Major Oil Storage Facilities (MOSF) Database*

These facilities have petroleum storage of 400,000 gallons or more.

No Major Oil Storage Facilities were reported within a 1/8-mile radius of the Property.

*Environmental Restoration Program*

These sites (which are generally municipally-owned) are receiving New York State funding for site investigation and remediation. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

No ERP sites were identified within a 1/2-mile radius of the Property.

*Voluntary Cleanup Program*

The Voluntary Cleanup Program is a NYSDEC program for investigation and remediation of (generally) privately-owned sites. Some sites in this program have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

Two VCP sites were identified within a 1/2-mile radius of the Property. The nearest listing was for the ConEd York Avenue Station, located on the west side of York Avenue between East 61<sup>st</sup> and East 63<sup>rd</sup> Streets, approximately 840 feet west-southwest of the Property. The listing indicated that this site operated as a manufactured gas facility with three gas holders until the mid-20<sup>th</sup> century, and was subsequently redeveloped with multistory office, residential, commercial and institutional buildings. Site investigation identified soil contamination with compounds associated with coal tar and petroleum, but only one compound (naphthalene) was detected at elevated levels in the groundwater. Bedrock depth beneath this site was reportedly highly variable (ranging from site grade to more than 60 feet below grade) and groundwater was reportedly present approximately 6 to 16 feet below grade, flowing in an easterly direction.

Based on their distance and the anticipated groundwater flow direction, this facility and the second VCP listing, for a site located approximately 2,035 feet north-northeast of the Property across the intervening East River, are not expected to have affected the Property.

*Brownfield Cleanup Program*

This NYSDEC program is the successor to the Voluntary Cleanup Program. Again, some sites have known contamination, whereas others have not had sufficient investigation to determine whether contamination is present.

Two BCP sites were identified within a 1/2-mile radius of the Property. The nearest listing was for the 1113 York Avenue site approximately 1,045 feet southwest of the Property. The listing indicated that this site was historically an auto repair facility with 17 USTs, and subsequently became vacant. The USTs were closed and removed along with some contaminated soil. Petroleum staining was noted in shallow soil in the northern portion of the site, but no samples were collected. Groundwater was not encountered during site investigations due to shallow bedrock. The listing had been deleted from the BCP database. AKRF is familiar with this site, having conducted City Environmental Quality Review (CEQR) relating to its redevelopment. It is also a part of the ConEd facility discussed in the previous section.

Based on its distance, anticipated groundwater flow direction and AKRF's knowledge of the site, this facility and the second BCP listing, for a site located approximately 2,600 feet south-southeast of the Property, are not expected to have affected the Property.

#### Historic Utility Sites

This is an inventory of certain power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites identified in various historic documents, maps and annual reports from 1898 to 1950.

No historical utility facilities were reported within a 1/8 mile of the Property. Note however the ConEd MGP facilities discussed in a previous section.

### **5.2.3 Local**

Records available online from the New York City Fire and Buildings Departments were viewed for the Property. The Fire Department records were obtained by Toxics Targeting, Inc. as part of the regulatory database search. Since the records typically address a multitude of issues, the review focused on items likely to relate to the potential presence of hazardous materials, e.g., petroleum tank installation applications and permits, and records indicating prior uses.

#### Buildings Department

Since no specific address exists for the Property, no Buildings Department records were identified for the Property.

#### Fire Department

The New York City Fire Department Tanks database was searched regarding past or current motor vehicle fuel and heating oil tank listings within a 1/8-mile radius of the Property. Computerized NYC Fire Department records identified three listings within this radius. Based on their distance and/or the anticipated groundwater flow direction, these listings are not likely to have affected subsurface conditions beneath the Property.

### **5.2.4 Additional Environmental Record Sources**

To enhance the search, ASTM requires that additional local records be checked when, in judgment of the environmental professional, such records are: 1) reasonably ascertainable; 2) useful, accurate and complete in light of the objective of the records review; and 3) are obtained in initial ESAs. These records include:

- Local Brownfields Lists
- Local Lists of Landfill/solid waste disposal sites
- Local Lists of Hazardous Waste/Contaminated Sites
- Local Lists of Registered Tanks
- Local Land Records (for activity use limitations)
- Records of emergency release reports
- Records of contaminated public wells

Sources for these records include:

- Department of Health/Environmental Division

- Fire Department
- Building Permit/Inspection Department
- Local/Regional Pollution Control Agency
- Local/Regional Water Quality Agency
- Local Electric Utility (for PCB records)

In AKRF's judgment, no such additional local records meeting the ASTM criteria are pertinent for the Property.

## **6.0 USER-PROVIDED INFORMATION**

The Rockefeller University representatives indicated that the Phase I ESA was performed in preparation for the construction of a new laboratory building in the eastern portion of the Property and a new recreation center in the western portion of the Property. The proposed project would entail demolition of the existing concrete structure in the western portion of the Property, limited disturbance of existing building facades and/or interiors for connections to the new laboratory buildings, and subsurface disturbance for new building construction.

To the extent that pertinent additional information was provided, it has been summarized elsewhere in this report.

## **7.0 PREVIOUS STUDIES**

AKRF prepared an Environmental Assessment Statement (EAS) for renovation and new construction in portions of the Rockefeller University Campus in 2007. A Phase I ESA, Subsurface (Phase II) Investigation, and Remedial Action Plan and Construction Health and Safety Plan (RAP and CHASP) were prepared by AKRF in May 2006, June 2007 and August 2007, respectively, as part of EAS preparation. These studies identified the following:

- The Rockefeller University campus uses were generally similar to current uses, with similar chemical/hazardous waste use and disposal procedures and the same petroleum storage tanks present on-campus.
- The Phase II was performed in accordance with a New York City Department of Environmental Protection (NYCDEP) – approved Work Plan and included the collection of soil samples from 13 borings in areas where construction was proposed, with the nearest borings located west of the Property at the current location of the Collaborative Research Center (CRC). The majority of the borings encountered shallow refusal on apparent decomposed rock or bedrock. Groundwater was encountered in three borings at depths ranging from approximately 6 feet below grade in the southern portion of the campus to 17 feet below grade in the western portion.
- Soil samples collected from the borings were sent to a New York State Department of Health-certified laboratory for analysis for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, PCBs, and Target Analyte List (TAL) metals. No groundwater samples were collected as part of the Phase II. A subsurface investigation report was submitted to NYCDEP following the completion of the Phase II. In a letter dated July 5, 2007, DEP concluded that the soil samples contained only minor contamination typical of urban fill and recommended that a

RAP and CHASP be prepared to prevent exposure of construction workers and future occupants of the site. A RAP and CHASP were submitted to NYCDEP, and in a letter dated October 19, 2007, DEP concluded that the RAP and CHASP were acceptable and that the applicant can proceed with construction.

A copy of the Phase II report is included as Appendix D.

## **8.0 LIMITATIONS AND DATA GAPS**

This assessment met the requirements of the American Society for Testing and Materials (ASTM) as established by ASTM Standard E1527-05 at the time it was performed, with the following limitations:

- Results of this investigation are valid as of the dates on which the investigation was performed.
- Although computerized New York City Buildings Department records were available for the Rockefeller University campus (Tax Block 1480, Lot 10), it was not readily ascertainable whether any such records pertain to the Property since no specific address exists for the Property.
- The reconnaissance included a tour of sub-grade portions of the Hospital and Nurse Buildings and the Power House, which may be disturbed by the proposed project (for connections to the new laboratory building). According to Mr. Candler, the locations of the connections have not been definitely determined and that only minimal disturbance of existing buildings is anticipated.
- Interviews and user-provided information were limited to those discussed in Section 6.0. To the extent that interviews were not conducted with the list of interviewees cited in the ASTM Standard (past and present owners, operators, and occupants of the Property and local government officials), AKRF does not believe that this represents a significant data gap likely to result in additional or significantly changed recognized environmental conditions or conclusions.
- The Property and area history was not conducted in five-year intervals. However, sufficient information about the history could be obtained from the available aerial photographs, and this data gap is not likely to alter the conclusions of this report.

## 9.0 CONCLUSIONS AND RECOMMENDATIONS

This Phase I Environmental Site Assessment was performed in conformance with ASTM Standard E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*. Any exceptions to, or deletions from, this practice are described in Section 8.0. The term “Recognized Environmental Condition” means the presence or likely presence of hazardous substances or petroleum at the property, including the ground, groundwater, or surface water at or under the property.

At the time of AKRF’s reconnaissance, the Property was occupied by asphalt-paved walkways, landscaped areas, a parking lot with a concrete shelter structure and a construction trailer staging area on the Rockefeller University campus, and by a portion of FDR Drive adjacent to the campus. The main Rockefeller University campus was adjacent to the FDR Drive portion of the Property. A pedestrian esplanade was east-adjacent to the Property, with the East River beyond. The greater surrounding area included residential, office, commercial and institutional (university, hospital, school and church) uses

This assessment revealed the following, including evidence of Recognized Environmental Conditions (the first two bullets) and other environmental concerns that are not considered RECs in accordance with ASTM E1527-05:

- The Property was historically occupied by vacant land, a swimming school, a stone yard with a machine shop, part of a hospital and a portion of a street. The eastern edge of the Property was filled with materials of unknown origin in the early 20<sup>th</sup> century. By the early 20<sup>th</sup> century, the Property was occupied by portions of the Rockefeller University campus, including an animal house, a “horse yard” and vacant land in the eastern portion, and a recreation area in the western portion. By 1928, part of the Rockefeller University Power House was shown on historical land use maps in the western portion of the Property; the reconnaissance indicated that the Power House is located below Property grade and extends beneath several adjacent buildings. FDR Drive was constructed in the eastern portion of the Property by 1951. Historical land use maps showed the eastern portion of the Property as vacant land in 2004, and showed the western portion as a parking lot with a parking shelter built in 1958.
- The surrounding area was mixed-use, with residential, educational, medical and commercial uses shown in the early 20<sup>th</sup> century, and development of the Rockefeller University campus and nearby large hospitals and research facilities throughout the 20<sup>th</sup> century. The regulatory database identified The Rockefeller University and other nearby hospitals and research facilities as generators of hazardous waste. Information provided by The Rockefeller University representatives indicated that on-campus laboratories produce chemical, biological and radioactive waste, whose disposal is managed by the Rockefeller University Department of Laboratory Safety and Environmental Health in accordance with applicable regulations. Laboratories and/or maintenance facilities with chemical storage were reportedly located in some buildings which may be connected to the proposed new laboratory building.
- A Subsurface (Phase II) Investigation was conducted by AKRF on the Rockefeller University campus in 2007. The investigation was conducted in preparation for renovation and new construction in portions of the campus, and included the collection of soil samples for laboratory analysis for volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, PCBs, and Target Analyte List (TAL) metals. No samples were collected from the Property, but the nearest sampling locations were located west of the Property at the current location of the Collaborative Research Center (CRC). Laboratory analytical results indicated only minor soil contamination typical of urban fill, with no evidence of a spill or release.

- During the reconnaissance, no evidence of petroleum storage tanks was noted on the Property. Regulatory listings and interviews indicated that nine petroleum aboveground storage tanks (ASTs) and one underground storage tank (UST) were present elsewhere on the Rockefeller University campus. Five ASTs were located in close proximity to the Property and were noted to be in good condition with no evidence of a release. All previously reported spills were minor and had been closed (i.e., cleaned up) to the satisfaction of the NYS Department of Environmental Conservation. Based on these observations, regulatory listings and tank locations, The Rockefeller University tanks are unlikely to have affected subsurface conditions beneath the Property.
- Lead-based paint may be present on the on-site parking shelter. Some peeling paint was noted on the shelter ceiling. Lead-based paint may also be present in existing building areas that would be disturbed for connections to the proposed laboratory building. Painted surfaces in typical interior areas of buildings that may be connected to the laboratory were observed to be in good condition.
- No suspect asbestos-containing materials (ACM) were noted on the Property. However, suspect ACM (e.g., electrical equipment components and pipe insulation) may be present in buried utilities beneath the Property. Suspect ACM may also be present in existing building areas that would be disturbed for connections to the proposed laboratory building. Suspect ACM observed in the inspected portions of the Hospital and Nurse Buildings and the Power House included thermal pipe insulation, 12-inch by 12-inch vinyl floor tiles and associated mastic, 24-inch by 24-inch suspended ceiling tiles, and window caulking and glazing in the Hospital Building. The observed suspect ACM were in good condition. Asbestos surveys and abatements have reportedly been conducted as part of renovation activities in Smith Hall/Smith Hall Annex and Flexner Building.
- No suspect polychlorinated biphenyl (PCB) - containing equipment was noted on the Property. However, suspect PCB-containing electrical utilities (e.g., feeder lines) may be present beneath the Property. In addition, suspect PCB-containing electrical equipment and/or fluorescent lighting fixtures may be present in existing building areas that would be disturbed for connections to the proposed laboratory building.

## **RECOMMENDATIONS**

- Hazardous waste produced by The Rockefeller University is managed by the Rockefeller University Department of Laboratory Safety and Environmental Health in accordance with the applicable regulations. However, there is some potential for (more likely historical) releases from The Rockefeller University or other nearby hospital/research facilities to have affected subsurface conditions beneath the Property. Fill materials of unknown origin may also be present beneath the Property, although past testing in other portions of the Rockefeller University campus identified no significant soil contamination associated with fill materials. AKRF recommends a subsurface investigation involving the collection and laboratory analysis of subsurface samples from areas where excavation is proposed. It is possible that this investigation may uncover evidence of a petroleum spill or other situation reportable to NYSDEC and/or other regulatory agencies.
- During any future subsurface disturbance, excavated soil should be handled and disposed of in accordance with applicable regulatory requirements. If dewatering is necessary for the proposed construction, water should be discharged in accordance with New York City Department of Environmental Protection (NYCDEP) requirements.
- Unless information exists that suspect ACM do not contain asbestos, prior to any activities with the potential to disturb suspect ACM, an asbestos survey of the areas to be disturbed should be conducted

and any ACM that would be disturbed should be removed and disposed of in accordance with local, state and federal requirements.

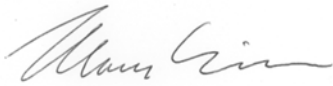

- Any activities with the potential to disturb lead-based paint must be performed in accordance with applicable requirements (including federal Occupational Safety and Health Administration regulation 29 CFR 1926.62 - *Lead Exposure in Construction*).
- Unless there is labeling or test data indicating that suspect PCB-containing electrical equipment and fluorescent lighting fixtures do not contain PCBs, and that fluorescent lighting bulbs do not contain mercury, if disposal is required, it should be conducted in accordance with applicable federal, state and local requirements.
- Any chemicals, biological waste and radioactive waste requiring disposal in areas that would be disturbed by the proposed project should be properly disposed of in accordance with applicable requirements.

## 10.0 SIGNATURE PAGE

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312.

I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the property for which the assessment was performed. I have performed all the appropriate inquiries in conformance with standards and practices set forth in 40 CFR Part 312.

---

Marcus Simons  
Senior Vice President

---

Asya Bychkov  
Environmental Engineer

## 11.0 QUALIFICATIONS

The purpose of this assessment was to convey a professional opinion about the potential presence or absence of contamination, or possible sources of contamination on the property, and to identify existing and/or potential environmental problems associated with the property including *Recognized Environmental Conditions* as defined in ASTM Standard E1527-05, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Practice*.

The assessment was performed in accordance with customary principles and practices in the environmental consulting industry, and in accordance with the above-referenced ASTM Standard, except as noted otherwise in Section 8.0. It should only be used as a guide in determining the possible presence or absence of hazardous materials on the property at the time of the reconnaissance, as it is based upon the review of readily available records relating to both the property and the surrounding area, as well as a visual reconnaissance of current conditions.

This Phase I Assessment is not, and should not be construed as, a guarantee, warranty, or certification of the presence or absence of hazardous substances, which can be made only with testing, and contains no formal plans or recommendations to rectify or remediate the presence of any hazardous substances which may be subject to regulatory approval. This report is not a regulatory compliance audit.

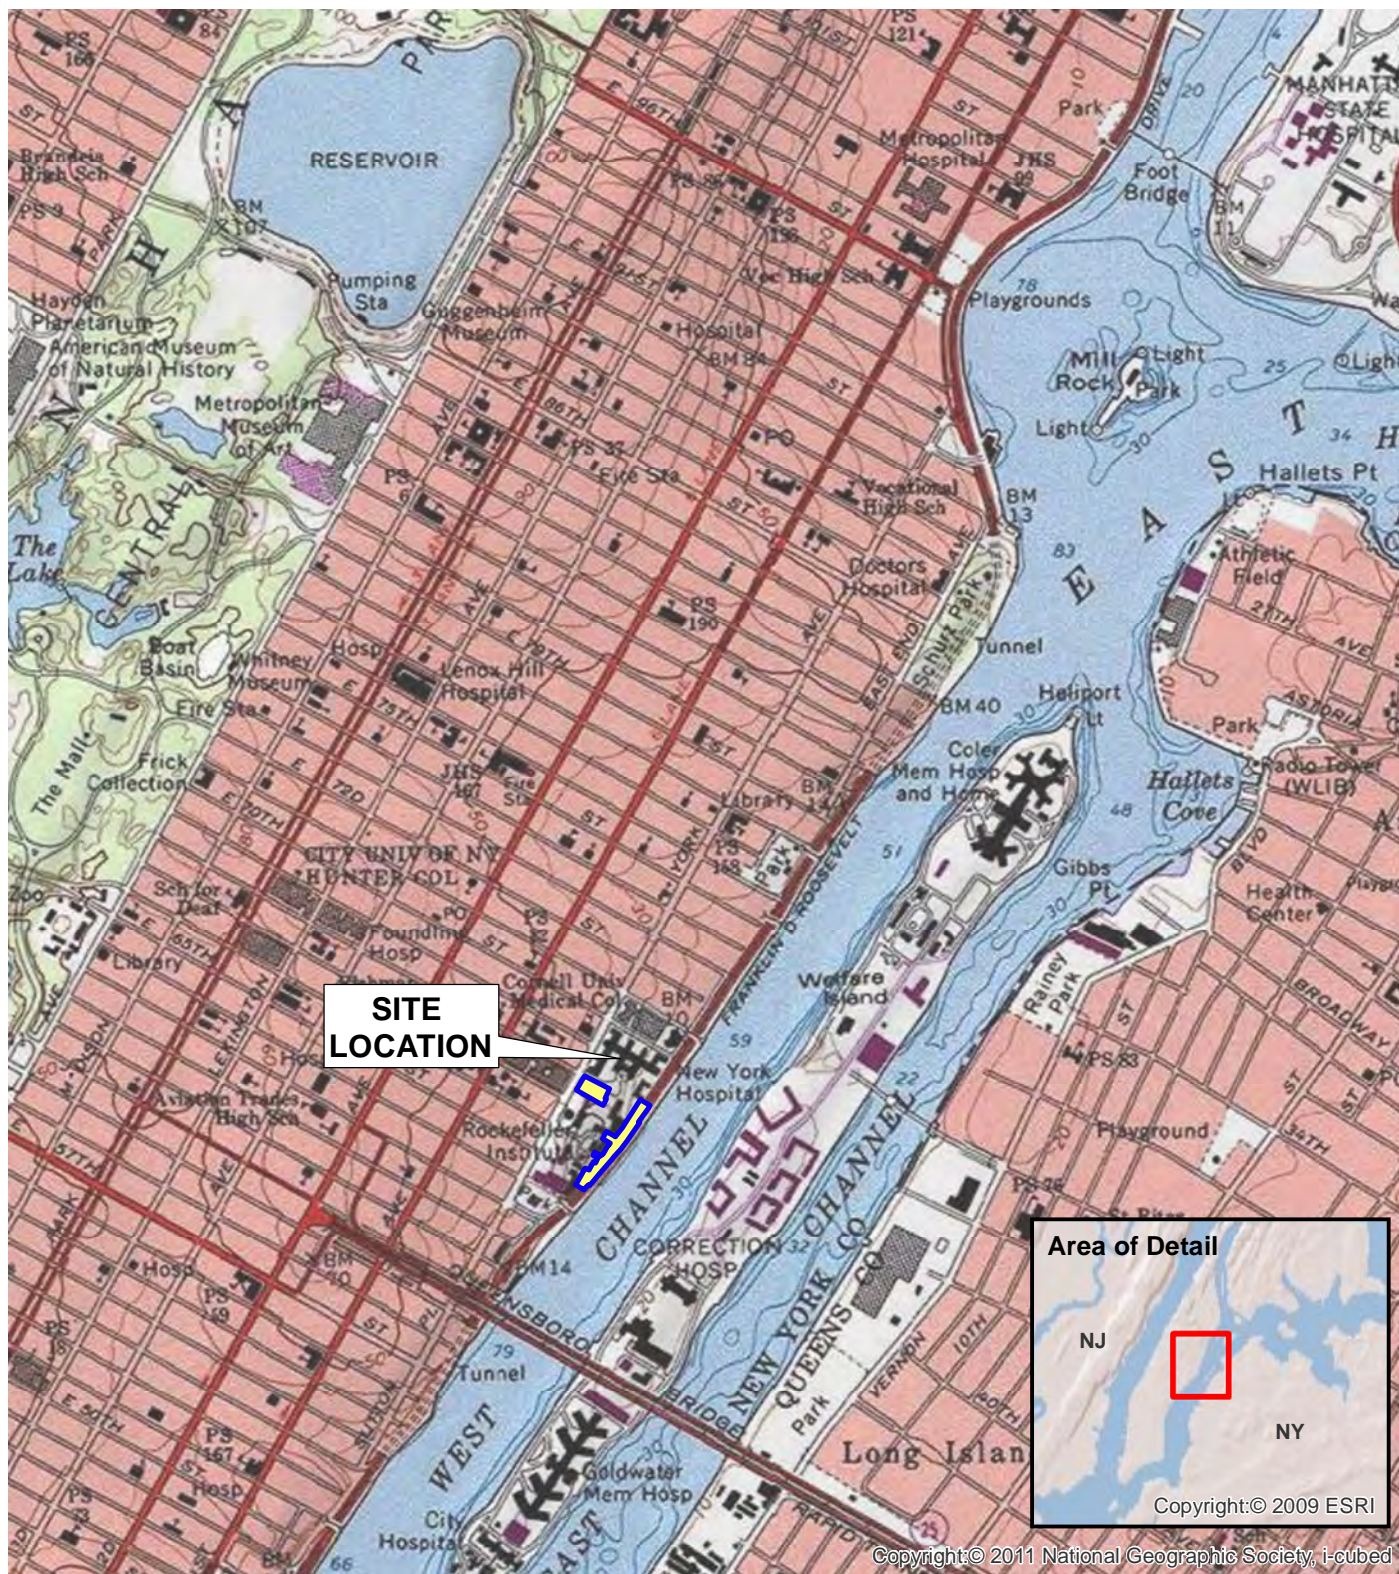

This report is based on services performed by AKRF, Inc. professional staff and observation of the property and its surroundings. We represent that observations made in this assessment are accurate to the best of our knowledge, and that no findings or observations concerning the potential presence of hazardous substances have been withheld or amended. The research and reconnaissance have been carried to a level that meets accepted industry and professional standards. Nevertheless, AKRF and the undersigned shall have no liability or obligation to any party other than The Rockefeller University and their successors or assignees, and AKRF's obligations and liabilities to the above, their successors or assignees is limited to fraudulent statements made, or grossly negligent or willful acts or omissions.

## **PHASE I**

### **ENVIRONMENTAL DATABASE REPORT**

**ROCKEFELLER UNIV. LABORATORY BUILDING  
NEW YORK, NY 10021**

OCTOBER 01, 2012

## **LIMITED WARRANTY AND DISCLAIMER OF LIABILITY**

### **Who is Covered**

This limited warranty is extended by Toxics Targeting, Inc. only to the original purchaser of the accompanying Environmental Report ("Report"). It may not be assigned to any other person.

### **What is Warranted**

Toxics Targeting, Inc. warrants that it uses reasonable care to accurately transcribe the information contained in this Report from the sources from which it is obtained. This limited warranty is in lieu of all other express warranties which might otherwise arise with respect to the Report. No one is authorized to change or add to this limited warranty.

### **What We Will Do**

If during the warranty period there is shown to be a material error in the transcription of the information contained in this Report from the sources from which it was obtained, Toxics Targeting, Inc. shall refund to the original purchaser the full purchase price paid for the Report. The remedy stated above is the exclusive remedy extended to the Purchaser by Toxics Targeting, Inc. for any failure of the Report to conform with this Warranty, or otherwise for breach of this Warranty or any other warranty, whether expressed or implied.

### **What We Won't Cover**

Toxics Targeting, Inc. has not and can not verify the accuracy, correctness or completion of the information contained in this Report. Information is obtained from government agencies, site owners, and other sources, and errors are common in such information. Because Toxics Targeting, Inc. can not control the accuracy of the information contained in this Report, or the uses which may be made of the information, TOXICS TARGETING, INC. DISCLAIMS LIABILITY TO ANYONE FOR ANY EVENTS ARISING OUT OF THE USE OF THE INFORMATION. TOXICS TARGETING, INC. SHALL NOT BE LIABLE FOR ANY DAMAGE CAUSED BY THIS REPORT, WHETHER DIRECT OR INDIRECT, AND WHETHER OR NOT TOXICS TARGETING, INC. HAS BEEN ADVISED OF OR HAS KNOWLEDGE OF THE POSSIBILITY OF SUCH DAMAGES. TOXICS TARGETING, INC. EXPRESSLY DISCLAIMS ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE. Some jurisdictions do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion or limitation may not apply to you.

### **Period of Warranty**

The period of warranty coverage is ninety days from the date of purchase of this Report. There shall be no warranty after the period of coverage. ANY AND ALL IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR PARTICULAR USE SHALL HAVE NO GREATER DURATION THAN THE PERIOD OF WARRANTY STATED HERE, AND SHALL TERMINATE AUTOMATICALLY UPON THE EXPIRATION OF SUCH PERIOD. Some jurisdictions do not allow limitations on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you.

**PLEASE REFER TO PAGES ONE AND FIVE FOR A DESCRIPTION OF SOME OF THE LIMITATIONS OF THIS ENVIRONMENTAL REPORT.**

- *Hazardous Waste Codes*
- *Information Source Guide*

## ***Introduction***

*Toxics Targeting* has combined environmental database searches, extensive regulatory analysis and sophisticated mapping techniques to produce your *Environmental Report*. It checks for the presence of 25 categories of government-reported toxic sites and provides detailed, up-to-date information on each identified site. The findings of your report are presented in an easy-to-understand format that:

1. ***Maps*** the approximate locations of selected government-reported toxic sites identified on or near a specified target address.
2. ***Estimates*** the distance and direction between the target address and each identified toxic site.
3. ***Reports*** air and water permit non-compliance and other regulatory violations.
4. ***Profiles*** some aspects of the usage, manufacture, storage, handling, transport or disposal of toxic chemicals at individual sites.
5. ***Summarizes*** some potential health effect information and drinking water standards for selected chemicals reported at individual sites.

## ***The Three Sections Of Your Report***

The first section highlights your report's findings by summarizing identified sites according to: **a)** distance intervals, **b)** direction, **c)** proximity to the target address and **d)** individual site categories. In addition, the locations of all identified toxic sites are illustrated on individual maps for each radius search distance used in your report. A close-up map illustrates the locations of all identified toxic sites, at the shortest radius search distance used in your report. Finally, a map of tax parcels and a table of selected information about those parcels are included.

The second section of your report contains *Toxic Site Profiles* that provide detailed information on each identified toxic site. The information in each *Toxic Site Profile* varies according to its source. Some toxic site categories have extensive information and some have limited information. All the information is updated on a regular basis.

The third section of the report contains appendices that identify: **1)** on-site spills reported to the national Emergency Response Notification System (ERNS), **2)** various toxic sites that cannot be mapped due to incomplete or erroneous addresses or other mapping problems, **3)** codes that characterize hazardous wastes reported at various facilities, **4)** methods used to map toxic sites identified in your report and **5)** information sources used in your report.

## ***How to Use Your Report***

- Check Table One to see the number of identified sites by distance intervals.
- Check Table Two to see identified sites sorted by direction.
- Check Table Three to see identified sites ranked by proximity to the target address.
- Check Table Four to see identified sites sorted by site categories.
- Use Table Five to get info for the subject parcel and every parcel found on the Tax Parcel Map
- Refer to the various maps to see the locations of identified toxic sites. Refer to the *Toxic Site Profile* and *Appendix* sections for additional information.

## *Toxic Site Databases Analyzed In Your Report*

### Search Radius

One-Mile

1) ***National Priority List for Federal Superfund Cleanup***: a listing of sites known to pose environmental or health hazards that are being investigated or cleaned up under the Federal Superfund program.

Half-Mile

2) ***Delisted National Priority List Sites***: a listing of NPL sites that have been removed from the National Priority List.

One-Mile

3) ***New York Inactive Hazardous Waste Disposal Site Registry***: a state listing of sites that can pose environmental or public health hazards requiring investigation or clean up.

One-Mile

4) ***New York Inactive Hazardous Waste Disposal Site Registry Qualifying***: a state listing of sites that qualify for possible inclusion to the NYDEC Inactive Haz. Waste Disposal Site Registry.

One-Mile

5) ***RCRA Corrective Action Activity (CORRACTS)***: waste facilities with RCRA corrective action activity reported by the USEPA.

Half-Mile

6) ***CERCLIS*** (Comprehensive Environmental Response, Compensation and Liability Information System): a federal listing of Non-NFRAP sites that can pose environmental or public health hazards requiring investigation or clean up.

Half-Mile

7) ***CERCLIS NFRAP***: a federal listing of CERCLIS sites that have no further remedial action planned.

Half-Mile

8) ***New York State Brownfield Cleanup Sites***: a listing of sites that are abandoned, idled or under-used industrial and commercial sites where expansion or redevelopment is complicated by real or perceived environmental contamination.

Half-Mile

9) ***New York Solid Waste Facilities Registry***: active and inactive landfills, incinerators, transfer stations or other solid waste management facilities.

Half-Mile

10) ***New York City 1934 Solid Waste Sites***: a listing of solid waste disposal sites operated by New York City municipal authorities circa 1934.

Half-Mile

11) ***New York and Federal Hazardous Waste Treatment, Storage or Disposal Facilities:*** sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRIS). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Half-Mile

12) ***Toxic Spills: active and inactive or closed*** spills reported to state environmental authorities, including *remediated* and *unremediated* leaking underground storage tanks. This database includes the following categories:

- Tank Failures
- Tank Test Failures
- Unknown Spill Cause or Other Spill Causes
- Miscellaneous Spill Causes

Eighth-Mile

13) ***New York State Major Oil Storage Facilities:*** sites with more than a 400,000 gallon capacity for storing petroleum products.

Eighth-Mile

14) ***New York State Petroleum Bulk Storage Facilities:*** sites with more than an 1,100 gallon capacity for storing petroleum products.

Eighth-Mile

15) ***New York City Fire Dept Tank Data:*** tank data from 1997.

Eighth-Mile

16) ***New York and Federal Hazardous Waste Generators and Transporters:*** sites reported by the NYS manifest system and the USEPA's Resource Conservation and Recovery Act Information System (RCRA). Also includes the following database:

- ***RCRA violations:*** waste facilities with violations reported by the USEPA pursuant to the Resource Conservation and Recovery Act.

Eighth-Mile

17) ***New York Chemical Bulk Storage Facilities:*** sites storing hazardous substances listed in 6 NYCRR Part 597 in aboveground tanks with capacities of 185 gallons or more and/or underground tanks of any size

Eighth-Mile

18) ***Historic New York City Utility Sites (1890's to 1940's):*** power generating stations, manufactured gas plants, gas storage facilities, maintenance yards and other gas and electric utility sites.

Half-Mile

19) ***New York Hazardous Substance Disposal Site Draft Study:*** a state listing of sites contaminated with toxic substances that can pose environmental or public health hazards. These sites were not eligible for state clean up funding programs.

Eighth-Mile

20) ***Federal Toxic Release Inventory Facilities:*** discharges of selected toxic chemicals to air, land, water or treatment facilities.

Eighth-Mile

21) ***Federal Air Discharges:*** air pollution point sources monitored by U.S. EPA and/or state and local air regulatory agencies.

Eighth-Mile

22) ***Federal Permit Compliance System Toxic Wastewater Discharges:*** permitted toxic wastewater discharges.

Eighth-Mile

23) ***Federal Civil and Administrative Enforcement Docket:*** judiciary cases filed on behalf of the U. S. Environmental Protection Agency by the Department of Justice.

On-site only  
(250 ft)

24) ***New York City Environmental Quality Review (CEQR) – E Designation Sites:*** parcels assigned a special environmental (“E”) designation under the CEQR process. E designation requires specific protocols that must be followed.

Property only

25) ***ERNS: Federal Emergency Response Notification System Spills:*** a listing of federally reported spills.

## *Limitations Of The Information In Your Report*

The information presented in your *Environmental Report* has been obtained from various local, state and federal government agencies. Please be aware that: **1)** additional information on individual sites may be available, **2)** newly discovered sites are continually reported and **3)** all map locations are approximate. As a result, this report is intended to be the **FIRST STEP** in the process of identifying and evaluating possible environmental threats to specific properties and can only serve as a guide for conducting on-site visits or additional, more detailed toxic hazard research.

*Toxics Targeting* tries to ensure that the information in your report is presented accurately and with minimal alteration. Systematic changes are made to correct obvious address errors in order to allow sites to be mapped. Any address changes that are made are noted in the map information section at the top of each corresponding *Toxic Site Profile*. Some information that has been withheld by government authorities remains included in Toxic Site Profiles and is identified as archival information. Since the information presented in your report is not edited, please be aware that it can contain reporting errors or typographical mistakes made by the site owners/operators or government agencies that produced the information. Also please be aware of some other limitations of the information in your report:

- The digital map used by *Toxics Targeting* is the same one used by the U. S. Census or local authorities in New York City. While the map is generally accurate, no map is perfect. In addition, *Toxics Targeting's* mapping methods estimate where toxic site addresses are located if the address is not specifically designated. **FOR THESE REASONS, ALL MAP LOCATIONS OF ADDRESSES AND REPORTED TOXIC SITES SHOULD BE CONSIDERED APPROXIMATE AND SHOULD BE VERIFIED BY ON-SITE VISITS;**
- **UNDISCOVERED, UNREPORTED OR UNMAPPABLE TOXIC SITES MIGHT NOT BE IDENTIFIED BY THIS REPORT'S CHECK OF 25 TOXIC SITE CATEGORIES. TOXIC SITES REPORTED IN OTHER GOVERNMENT DATABASES MIGHT ALSO EXIST. FOR THESE REASONS, YOUR REPORT MIGHT NOT IDENTIFY ALL THE TOXIC SITES THAT EXIST IN THE AREA IT SEARCHES;**
- The appendix of your report contains a listing of sites that could not be mapped due to incomplete or erroneous address information or other mapping problems. This listing includes unmappable toxic sites in the zip codes searched for the report as well as toxic sites without zip codes reported in the same county. **IF YOU WOULD LIKE INFORMATION ON ANY OF THE LISTED SITES, PLEASE CONTACT *TOXICS TARGETING* AND REFER TO THE SITE ID NUMBER.**
- New York State Department of Environmental Conservation Remediation Site Borders are approximate and may not align with tax parcel boundaries mapped by local authorities or the digital map used by the US Census Bureau. As a result, Remediation Site Borders may overlap parcels that do not involve site remediation activities. Selected parcels also can involve multiple Remediation Site Borders. Refer to individual site profiles for more information. Sites without profiles include potential new sites or sites that have not yet been publicly listed by DEC.
- Some toxic sites identified in your report may be classified as **known hazards**. Most of the toxic sites identified in your report involve **potential hazards** related to the on-site use, manufacture, handling, storage, transport or disposal of toxic chemicals. Some of the toxic sites identified in your report may be the addresses of parties responsible for toxic sites located elsewhere. **YOU SHOULD ONLY CONCLUDE THAT TOXIC HAZARDS ACTUALLY EXIST AT A SPECIFIC SITE WHEN GOVERNMENT AUTHORITIES MAKE THAT DETERMINATION OR WHEN THAT CONCLUSION IS FULLY DOCUMENTED BY THE FINDINGS OF AN APPROPRIATE SITE INVESTIGATION UNDERTAKEN BY LICENSED PROFESSIONALS;**

- Compass directions and distances are approximate. Compass directions are calculated from the subject property address to the mapped location of each identified toxic site. The compass direction does not necessarily refer to the closest property boundary of an identified toxic site. The compass direction also can vary substantially for toxic sites that are located very close to the subject property address.
- The information presented in your report is a summary of the information that *Toxics Targeting* obtains from government agencies on reported toxic sites. **YOU MAY BE ABLE TO OBTAIN ADDITIONAL INFORMATION ABOUT REPORTED SITES WITH THE FREEDOM OF INFORMATION REQUEST FORM LETTERS THAT ARE PROVIDED ON THE INSIDE OF THE BACK COVER.**

## Section Two: Toxic Site Profiles

The heading of each *Toxic Site Profile* refers to the site's map location and details:

- The facility name, address, city, state, and zip code.
- Any changes that were made to a site's address in order to map its location.
- The site mapping method that was used (see *How Sites are Located*, at the end of this section for more information).

*Toxic Site Profiles* summarize information provided by site owners or operators and government agencies regarding various toxic chemical activities reported at each site, such as:

- Whether chemicals were stored, produced, transported, discharged or disposed of.
- The name of chemicals and their Chemical Abstract Series (CAS) numbers.
- The amount of chemicals and the units (gallons/pounds) the chemical was measured in.
- Whether the site or storage tanks at the site are currently active or inactive.
- Special codes used by government agencies to regulate hazardous waste activities at some sites, or a complete description of the codes follows the profiles section.

For selected individual chemicals reported at various toxic sites, some potential health effect summary information appears below the site profile. Each potential health effect summary identifies chemicals by name and by Chemical Abstract Series (CAS) Number. An "x" under each potential health effect heading indicates positive toxicity testing results reported by the National Institute of Occupational Safety and Health's Registry of Toxic Effects of Chemical Substances (RTECS). Some chemicals (mostly appearing in profiles of Hazardous Waste facilities), are reported as mixtures, and RTECS health effect information is only available for individual chemicals. In addition, RTECS only provides information on approximately 100,000 common chemicals. Consequently, the absence of potential health effect summary information for a particular chemical identified in a Toxic Site Profile does not necessarily mean that the chemical does not pose potential health effects.

The Maximum Contaminant Level (MCL) in drinking water allowed for selected chemicals is also noted. In most cases, the only applicable MCL has been set by the New York State Department of Health (NYSDOH). Where NYSDOH has not set an MCL, the federal standard, if one exists, is listed and is marked by an asterisk.

Presented below are column headings that describe the health effect definitions used in RTECS and applicable New York State and federal drinking water standards. Reference sources for information presented in this section are also provided.

ACUTE TOX: **Acute Toxicity:** Short-term exposure to this chemical can cause lethal and non-lethal toxicity effects not included in the following four categories.

TUMOR TOX: **Tumorigenic Toxicity:** The chemical can cause an increase in the incidence of tumors.

MUTAG TOX: **Mutagenic Toxicity:** The chemical can cause genetic alterations that are passed from one generation to the next.

REPRO TOX: **Reproductive Toxicity:** May signify one of the following effects: maternal effects, paternal effects, effects on fertility, effects on the embryo or fetus, specific developmental abnormalities, tumorigenic effects, or effects on the newborn (only positive reproductive effects data for mammalian species are referenced).

IRRIT TOX: **Primary Irritant:** The chemical can cause eye or skin irritation.

MCL: **Drinking Water Standard - Maximum Contaminant Level (MCL)** listed under Drinking Water Supplies, 10 NYCRR Part 5, Subparts 1.51(f),(g), and (h) for NYDOH MCL's and under the Safe Drinking Water Act, 40 CFR 141, Subparts B and G, (\* indicates value for total trihalomethanes) for federal MCL's.

Reference Source for Toxicity Information: Registry of Toxic Effects of Chemical Substances (RTECS), NIOSH (on-line database); For further information, contact: NIOSH, 4676 Columbia Parkway, Cincinnati, OH, 45226, 800/35-NIOSH.

Reference Source for Drinking Water Standards: New York State Department of Health, Bureau of Toxic Substances Assessment, 2 University Place, Room 240, Albany, NY 12203, 518/458-6373.

U.S. Environmental Protection Agency, Office of Drinking Water, 401 M St SW, Mailstop WH-556, Washington, DC, 20460, 202/260-5700.

Inactive Hazardous Waste Disposal Site Classifications:

- 1 -- Causing or presenting an imminent danger of causing irreversible or irreparable damage to the public health or the environment -- immediate action required;
- 2 -- Significant threat to the public health or environment -- action required;
- 3 -- Does not Present a significant threat to the environment or public health -- action may be deferred;
- 4 -- Site properly closed --requires continued management;
- 5 -- Site properly closed, no evidence of present or potential adverse impact -- no further action required;
- 2a -- This temporary classification has been assigned to sites where there is inadequate data to assign them to the five classifications specified by law;
- A -- Work underway and not yet complete;
- P -- Potential Site;
- D<sub>1</sub>, 2, 3 -- Delisted Site (1: hazardous waste not found; 2: remediated; 3: consolidated site or site incorrectly listed);
- C -- Remediation Complete (formerly D2).

Brooklyn, NY 11208

OWNER(S) DURING DISPOSAL:

OPERATOR(S) DURING DISPOSAL:

NAME: UNKNOWN3  
ADDRESS:

Operator Type: Corporate or Commercial

NAME: National Rubber Adhesives, Inc.  
ADDRESS: 38-31 9th Street  
Long Island City, NY 11385

SITE DESCRIPTION:

LOCATION: The site is located in an urban/industrial section of Long Island City at the intersection of 9th Street between 38th Avenue and 40th Avenue. It is located on the east side of 9th Street, approximately 0.4 miles north of the Queensboro Bridge.

SITE FEATURES: The property extends 335 feet from the north to the south and 117 feet from the west to the east. The entire property is occupied by a 30,000 square feet, one story, slab-on-grand masonry building. A small courtyard is located in the central portion of the building on the western side. The site and surrounding areas are generally level.

CURRENT ZONING/USE(S): The site is currently zoned commercial. The site is currently used as a marble fabrication shop, an automotive repair shop, and a production studio. Another tenant occupies the other one-third of the building for storage of sheet metal and supplies for an off-site manufacturing business. No metal fabrication, cutting, or manufacturing associated with this business takes place on this site.

HISTORICAL USE(S):

National Rubber Adhesives, Inc. operated a manufacturing facility for adhesives until 1995 and operated at this location for 62 years. (National Rubber Adhesives, Inc. occupied the northern two-thirds of the building.) Five underground storage tanks (USTs) were closed in-place, including one toluene, two gasoline, one methyl ethyl ketone (MEK) and one heptane UST.

OPERABLE UNIT(S): The site is being managed through two operable units (OU). OU1 is for off-site work and OU2 is for on-site work. Each OU will include investigating for soil and groundwater contamination.

SITE GEOLOGY AND HYDROGEOLOGY: The site is approximately 15 to 20 feet above mean sea level. The nearest surface water body is the East River, approximately one quarter mile west of the site. Groundwater was observed approximately 5 to 10 feet below ground surface and flows in a westerly direction toward the East River. The depth to bedrock varies across the investigation area from 10 to 15 feet below surface.

CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
-----	-----
TOLUENE	UNKNOWN
TOLUENE U-220 (F005 WASTE)	UNKNOWN
XYLENE (MIXED)	UNKNOWN
BENZENE	UNKNOWN

## ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

## NATURE AND EXTENT OF CONTAMINATION:

Based upon investigations to date, the primary contaminants of concern at the site include toluene. Toluene has been detected at levels as high as 280,000,000 parts per billion (ppb) in groundwater in MW-2, which is above the respective groundwater standard of 5 ppb. Other wells have shown levels of toluene in the 10,000's ppb. Benzene, ethylbenzene, and xylenes have all been shown to be elevated.

These previous investigations have identified exceedances of standards, criteria and guidance for those contaminants in soil as well. Elevated levels of benzene and toluene were also noted in the soil vapor as well.

The groundwater plume appears to be migrating off-site, however the extent of the plume is unknown. In 2011, the concentration of toluene was found as high as 130,000 ppb in an off-site location. Possible site impacts to the East River have not been assessed at this time.

SPECIAL RESOURCES IMPACTED/THREATENED : None known.

SIGNIFICANT THREAT: A significant threat is posed from potential exposure to site related contaminants from soil vapor intrusion both on and off-site structures. Exposures to contaminated groundwater are not expected because public water serves the area residents.

## ASSESSMENT OF HEALTH PROBLEMS:

Elevated levels of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and metals have been identified in soil and groundwater at this site. The area is paved and served by public water so exposures to contaminated soils and groundwater are unlikely. Due to the high levels of VOCs in on-site groundwater, there is the potential for exposures related to soil vapor intrusion in surrounding buildings. A soil vapor investigation is planned as part of the ongoing remedial investigation.

## PROJECT COMPLETIONS:

Owner Type: Local Government

#### SITE DESCRIPTION:

##### Location:

The site is located immediately south of, and adjacent to, the building located at 21-03 44th Avenue in Long Island City, Queens, NY.

##### Site Features:

The site includes the sidewalk/street area immediately above and in the vicinity of a broken sewer line near the location of three groundwater monitoring points placed on the sidewalk in front of the building at 21-03, along 44th Avenue.

##### Current Zoning/Uses:

The site area is zoned as M1-4, which allows for manufacturing, commercial and certain community uses. In the immediate vicinity of the site, there are manufacturing and commercial businesses. The nearest residential area is approximately four hundred feet south of the site, along 44th Road.

##### Historical Uses:

Prior uses of the building at 21-03 44th Avenue include metal plating and the painting of radium dials. Light to medium grade manufacturing has been conducted immediately to the north and east of the site for over fifty years, and warehousing and frame manufacturing are conducted to the south. A New York City high school is located approximately three hundred fifty feet to the south of the site.

Contamination appears to have entered the environment from a broken sewer pipe that connects the building at 21-03 44th Avenue and the main sewer line in the street.

##### Site Geology and Hydrogeology:

Soil at the site consists of historic fill mixed with silty sands to a depth of approximately nineteen feet, with bedrock below this depth. Groundwater is encountered at approximately twelve feet below ground surface, and the flow is generally to the south.

#### CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
TETRACHLOROETHYLENE (PCE)	UNKNOWN
CHROMIUM	UNKNOWN

#### ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

##### Nature and Extent of Contamination:

Investigations conducted during a 2008 site characterization indicated a plume of chlorinated VOCs (primarily PCE) extending from the vicinity of the property at 21-03 44th Avenue to the northern edge of the Technology High School one block to the south, and possibly beyond. Chromium is also present in site groundwater.

Exceedances of standards, criteria, and guidance in groundwater include PCE at 36,000 ug/l vs. a standard of 5 ug/l and chromium

as high as 1,500 ug/l vs. a standard of 50 ug/l. Trichloroethylene, cis- 1,2 - dichloroethene and vinyl chloride also exceeded standards, however to a lesser degree.

#### Significant Threat:

Contamination presents a significant threat to the environment as demonstrated by the magnitude and aerial extent of groundwater impacts.

#### ASSESSMENT OF HEALTH PROBLEMS:

On- and off-site groundwater is contaminated with lead, chromium, hexavalent chromium and volatile organic compounds, primarily tetrachloroethene (PCE) and its breakdown products. The area is served by public water, thus exposure via ingestion of contaminated groundwater is not expected. Insufficient data exists for complete evaluation of potential exposures to other site-related contamination.

NAME: CONSOLIDATED EDISON CO OF NY., INC.

Owner Type: Missing Code in Old Data

ADDRESS: 4 IRVING PLACE  
NY, NY 10003

## SITE DESCRIPTION:

Location: The former York Avenue gas holder site is located on the west side of York Avenue, from East 61st to East 63rd Street, in the Borough of Manhattan in New York City. The eastern portion of Block 1456 is bounded by East 61st Street to the south, York Avenue to the east, East 62nd to the north, and 1st Avenue to the west. The eastern portion of Block 1457 is bounded by East 62nd Street to the south, York Avenue to the east, East 63rd Street to the north, and 1st Avenue to the west. The final parcel, Block 1475, is bounded by York Avenue to the west, East 62nd Street to the south, FDR Drive to the east and East 63rd Street to the north.

Site Features: The main site features are a 12-story condominium/office building, a museum, a 6-story commercial building with parking garage, a 19-story cooperative residential building, three 12-story residential buildings, and 26-story university tower with 3-level underground parking structure.

Current Zoning/Use(s): The site is currently active with zoning for residential, commercial and manufacturing. The surrounding parcels are currently zoned for residential and commercial uses.

Historical Uses: The first gas holders were constructed on Block 1457 between 1874 and 1879. A third holder was constructed in 1889. Between 1905 and 1915 the original two holders were removed and replaced with a single large holder, and another large holder was built on Block 1456. All of the gas holders operated until 1948, when the structures were removed. Between 1949 and 1960, all of the parcels were redeveloped.

Operable Units: The site is currently being managed as a single operable unit.

Site Geology and Hydrogeology: The site consists of three unconsolidated soil units varying widely in thickness and distribution across the site overlying the bedrock surface. The bedrock ranges from at or just below the ground surface at the western side of the site, to approximately 48 feet below ground surface along the west side. At some locations the native soils have been completely removed and replaced with fill material, which is found as thick as 12 feet. A sand unit lies below the fill material, in thicknesses from 5 to 60 feet. Below the sand are both gravel and sand units, and a coarse-grained gravel unit. Groundwater was found at depths of 6 to 16 feet below ground surface. The flow direction is generally to the east.

## CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE

QUANTITY

-----  
COAL TAR-----  
UNKNOWN

## ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

Prior to Remediation: A partial site investigation was completed on Blocks 1456 and 1457. The results indicate that the contaminants of concern were semi-volatile organic compound (SVOCs), including polycyclic aromatic hydrocarbons (PAHs) and

benzene/toluene/ethylbenzene/xylene (BTEX) constituents. In surface soil, total PAHs ranged from 1,038 ug/kg to 19,310 ug/kg. In subsurface soils, total BTEX ranged from non-detect to 49,200 ug/kg. PAHs ranged from non-detect to 303,300 ug/kg in subsurface soils. In groundwater, only naphthalene was detected at elevated levels, ranging from non-detect to 340 ug/L.

A Remedial Investigation is currently underway.

ASSESSMENT OF HEALTH PROBLEMS:

NYSDOH has insufficient information to fully evaluate the potential for human exposures.

PROJECT COMPLETIONS:

## SITE DESCRIPTION:

This BCP Application is for remediation of a 0.517-acre site located at 1113 York Avenue in the Lexox Hill section of Manhattan, New York.

Once this vacant property is remediated, construction of a residential building and multi-level parking structure that will include a swimming pool and health club facility is proposed.

Known or suspected contaminants listed are petroleum, chlorinated solvents, SVOCs, metals, PCBs, as well as other VOCs, and they are impacting the soil, groundwater and soil gas.

This BCP Application is currently under review and the Department of Environmental Conservation will determine the application's approval and eligibility.

## CONFIRMED HAZARDOUS WASTE DISPOSED:

None reported

## ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

This site was used for auto repair for 50+ years and contained 17 USTs. While excavating for redevelopment these tanks were found and removed. Approximately one half of the site was excavated to bedrock while the remaining (northern)half was only excavated in areas where tanks had been found. End-point sampling in the tank excavations found a number of SVOCs and metals that narrowly exceeded SCOs. Test pits in the northern half revealed petroleum staining (1-5 feet) and odors however no samples were taken.

Groundwater was not encountered on-site but may be present (based on regional data) in sections of the site where bedrock is not as shallow.

(See Spill # 0606853)

**ASSESSMENT OF HEALTH PROBLEMS:**

Information submitted with the BCP application regarding the conditions at the site are currently under review and will be revised as additional information becomes available.

Donald Denihan  
ADDRESS: 500 WEST 37TH STREET  
NEW YORK, NY 10018

Owner Type: PRP - Class 2 HazSubs

## SITE DESCRIPTION:

## Site Location:

The site is located on the upper east side of Manhattan, between York Ave and the FDR Drive, in an urban area with mixed uses. The address is 505 East 75th Street. Prior addresses were 502-504 East 76th Street and 503-509 East 75th Street. The site is described on the Manhattan Tax map as Block 1487 Lots 4, 5, and 8.

## Site Features:

The entire property, which covers 33,215 square feet, is covered by a building occupied by a private school (the Lycee Francais).

## Current zoning:

The site is zoned for commercial and residential use. The deed restriction allows restricted-residential use. Surrounding uses are residential, industrial, and commercial.

## Historical Use:

Four vacant commercial buildings that existed on the site were demolished. Prior uses of the property were light industrial and commercial: an automobile repair shop, bakery, dry cleaner, and garage. Construction of the school's basement required excavating 30 feet below grade and into bedrock.

## Geology and Hydrogeology:

Groundwater was encountered at approx 15 ft bgs and bedrock was encountered at approx 5 ft bgs on East 75th Street and 18 ft bgs on East 76 St. Groundwater flows generally to the east and slightly to the north.

## CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
TETRACHLOROETHYLENE (PCE)	UNKNOWN
TRICHLOROETHENE (TCE)	UNKNOWN

## ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

## Nature and Extent of Contamination:

The groundwater at the site is contaminated with tetrachloroethylene. The foundation of the school building is lined with a vapor barrier. The groundwater is collected, treated, and discharged to the NYC sewer system. A discharge permit is issued by the NYCDEP.

An off-site exposure assessment and investigation was conducted. Soil gas and groundwater samples were collected from the sidewalks around the site with one result on the south side of E 76 St on the nw corner of the school was of concern. NYSDOH requested that indoor air sampling and sub slab samples be collected in the adjacent properties. The investigation concluded in March 2008 and no vapor intrusion was detected.

## ASSESSMENT OF HEALTH PROBLEMS:

On-site groundwater is contaminated with tetrachloroethene. However, the area is served with public water; therefore, ingestion exposure is not expected. Currently, an activated carbon groundwater treatment system is in operation on-site. Contaminated soils have been removed and disposed of offsite. The site is covered by the onsite building and pavement. A vapor barrier was installed in the onsite building to minimize the potential for soil vapor intrusion. The evaluation of the potential for soil vapor intrusion into nearby off-site structures is complete.

OPERATOR(S) DURING DISPOSAL:

APPLICANT REQUESTOR(S):

NAME: TERRA COTTA

STUART MATCH SUNA

ADDRESS: 42-22 22ND STREET

LONG ISLAND CITY, NY 11101

SITE DESCRIPTION:

Site Location:

The property is along the East River waterfront, adjacent to and south of the Queensboro (59th Street) Bridge in Long Island City. The parcels that comprise the development are the former Terra-Cotta site located at 41-98, 42-02 and 42-16 Vernon Boulevard. Parcel A is approximately a 0.20-acre portion of the Terra-Cotta site. The Terra-Cotta site is located between the East River and Vernon Boulevard, south of the Queensboro Bridge and has been vacant for almost fifteen years.

## Current Zoning:

Current use of the site is industrial and planned use is for residential and commercial use.

## Site Features:

The north parcels are vacant, and the south parcel contains a temporary NYPA generating station. The proposed Silvercup West development is a 2.3 million square foot project that will include approximately 1,000 units of housing, 655,000 square feet of office space, 350,000 square feet of film and television studio and studio support space, 75,000 square feet of retail, a 40,000 square foot health club, as well as a 125,000 square foot museum/cultural facility, a 1,000 seat catering facility and a 1,000 car garage.

## Historical Use:

The Site was historically used for industrial and manufacturing purposes. The Site was occupied by the New York Architectural Terra Cotta Company, from circa 1898 to some time after 1915, for the manufacture of terra cotta, a construction material consisting of cast and fired clay units. By 1947, northern areas of the Site were used for plastic products manufacture and electronics operations then later manufacture of wood products and posts, waste paper sorting and rag processing. Circa 1980, a Pepsi Cola Company facility occupied the northern portion of the Site. From 1990 the property has been vacant.

## Site Geology and Hydrogeology:

The surface soil is a fill layer comprised of a brown, dark brown, fine to medium sand layer containing some silt, gravel, brick, concrete fragments, wood, metal, and ash. The thickness of this layer varies from 5-20 feet from east to west. A natural sand deposit containing silt and fine gravel is located below the fill. Gneiss bedrock underlies the surficial fill and potentially natural sand. Some of the Gneiss has weathered into grayish-brown coarse sand with cobbles, gravel, silt and mica. The depth to competent rock varies from 10 ft-bgs in the center of the site to 60 ft-bgs in the east and 25 ft-bgs in the west.

Groundwater underlying the Site ranged between 8 and 16 ft-bgs and elevations indicate that it generally flows to the west, toward the East River.

The Brownfield Cleanup Agreement (BCA) was executed on November 16, 2006.

## CONFIRMED HAZARDOUS WASTE DISPOSED:

TYPE	QUANTITY
BENZO[K]FLUORANTHENE	UNKNOWN
BENZO(A)PYRENE	UNKNOWN
MEK	UNKNOWN
indeno(1,2,3-cd)pyrene	UNKNOWN
BENZO(B)FLUORANTHENE	UNKNOWN
LEAD	UNKNOWN

## ASSESSMENT OF ENVIRONMENTAL PROBLEMS:

## Nature and Extent of Contamination:

## Soil:

A review of historic information and the results of the RI identified the presence of petroleum contamination in soil samples located at 7 to 25 ft-bgs. Subsurface soil is also impacted by BTEX VOCs, and there were two samples with exceedances for pesticides.

## Groundwater:

Two of five monitoring wells exhibited petroleum free product which was fingerprinted and revealed to be weathered No. 6 fuel oil. Metal exceedances are consistent with brackish conditions.

## Soil Vapor:

Total VOCs in the Soil vapor samples ranged from 325 to 1,009 mcgpcm.

## Significant Threat:

It has been determined that this site does not pose a significant threat to human health or the environment.

## ASSESSMENT OF HEALTH PROBLEMS:

Contact with contaminated soil or groundwater is unlikely unless people dig below the ground surface. Contaminated groundwater at the site is not used for drinking or other purposes and the site is served by a public water supply that obtains its water from a different source not affected by this contamination. Volatile organic compounds may move into the soil vapor (air spaces within the soil), which in turn may move into overlying buildings and affect the indoor air quality. This process, which is similar to the movement of radon gas from the subsurface into the indoor air or buildings, is referred to as soil vapor intrusion. The potential exists for the inhalation of site contaminants due to soil vapor intrusion for any future on-site building redevelopment and occupancy.

## PROJECT COMPLETIONS:

None reported

## **HAZARDOUS MATERIAL SPILLS INTRODUCTION**

The Hazardous Material Spills in this section are divided into eight spill cause groupings. These include:

Active Spills Section: Spills with incomplete paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 1) Tank Failures
- 2) Tank Test Failures
- 3) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 4) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, and Vandalism.

Closed Status Spills Section: Spills with completed paperwork that may or may not be cleaned up (See Date Cleanup Ceased)

- 5) Tank Failures
- 6) Tank Test Failures
- 7) Unknown Spill Cause or Other Spill Cause Hazardous Spills
- 8) Miscellaneous Spill Causes: Equipment Failure, Human Error, Tank Overfill, Deliberate Spill, Traffic Accidents, Housekeeping, Abandoned Drum, and Vandalism.

All spills within each spill cause category are presented in order of proximity to the subject site address.

**Please note that spills reported within 0.25 mile (or one-eighth mile in New York City) are mapped and profiled.**

**Between 0.25 mile (or one-eighth mile in New York City) and 0.5 mile, only the following spills are mapped and profiled:**

- \* Tank Failures;
- \* Tank Test Failures;
- \* Unknown Spill Cause or Other Spill Cause;
- \* Spills greater than 100 units of quantity; and
- \* Spills reported in the NYSDEC Fall 1998 MTBE Survey.

A table at the end of each section presents a listing of reported Miscellaneous Spills with less than 100 units located between 0.25 mile (or one-eighth mile in Manhattan) and 0.5 mile. These spills are neither mapped nor profiled.

-----  
DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "M TIBBE"

07/21/2005 1020 hrs: Called Ralph Ortiz, superintendent of building at 400 East 71st, referred to Lisa Bluttal at Transworld Equity (212-355-4900). Lisa will check files regarding cleanup of spill. A.L Eastmond (Carlos/Neal) apparently did the work to close the original 20k buried tank. NYC building permit indicates buried oil tank was replaced with an above-ground storage tank, also changed from #6 to #2 fuel oil, date 05/14/1991. PBS database (2-403458) indicates 05/01/1991 installation of a 5,800-gallon above ground tank for #4 oil. The 20k tank was closed in place.

08/18/2006: No additional written information is available, however conversations with owners indicate that spill was minor and cleaned up and the new tank has been in service with no difficulties. Given the age of the spill and its location in a parking garage, potential environmental impact is considered to be low. Spill should be closed. M.Brand NYSDEC DER Albany.

10/2/09 – Austin – Spill transferred from Albany staff to Ahmed, for further investigation to see if there is concurrence on closure for this spill – end

10/27/11 – Austin – Spill Transferred from Ahmed to Vought – end

1/6/12–Vought–Received call from Jocelyn Finney (Ph:631-753-0333) who noted that she was looking to get spill closed as quickly as possible and was inquiring about further DEC requirements. As per notes above site has a 20,000-gallon #6 fuel oil UST that was closed in place and replaced with a 5800-gallon #2 fuel oil UST in 1991. PERSONAL NOTE: Vought disagrees with notes of DEC Brand above that spill should be closed "given the age of the spill and its location in a parking garage". Degradation of heavy #6 fuel oil cannot be confirmed as well as location of UST in a parking garage may impact other residences given close proximity in Manhattan of other residences and basements. As such DEC requires investigation of the original 20,000-gallon #6 fuel oil UST. PBS registration notes former 20,000-gallon UST was diesel. Caller Remarks note that "OIL LEAKING FROM TANK TO AREA BELOW". Vought called Finney and noted below requirements.

1/12/12–Vought–Conference call with owner Lisa Bluttal and owners tank rep (Chris Burge–Total tank Ph:917-841-3373). Vought explained requirements and Bluttal will submit investigation work plan via email to Vought for approval.

1/25/12–Vought–Received Subsurface Investigation Work Plan from Miller (Nick Marrone Ph:631-369-4900 Fax:631-369-4909) dated 1/23/12. Miller proposes to install four soil borings "in the vicinity of the former 20K underground storage tank...". Borings will be installed via Geoprobe until groundwater or refusal is encountered. The sample with the highest PID reading will be sent to lab and an ISR will be submitted to the DEC. "It is our understanding that additional borings/monitoring wells and remedial action may be required upon review of the field and laboratory data by your office. Proposal was sent from:

Ms. Lisa Bluttal  
Manocherian Brothers  
150 East 58th Street  
28th Floor  
New York, NY 10155-2899

Ph: (212)355-4900  
Fax: (212)355-3066

Vought sent review letter requiring submission of a site plan, performance of soil borings to at least five feet below tank invert and not to refusal or bedrock as proposed and correction of PBS 2-403458 20,000-gallon UST from diesel to #6 with above requirements to Bluttal with cc to Finney and Marrone.

1/31/12-Vought-Received email revision entitled Subsurface Investigation Work Plan (Revised January 27, 2012) from Miller Marrone. Work Plan proposes installation of six soil borings "to at least tank bottom". "If groundwater is encountered within 20-feet of the surface and there has been a suspected leak the installation of three monitoring wells to NYSDEC specifications cannot be completed at this location because of location of the 20K UST. If applicable, monitoring wells may be done outside of the building at a later date." AN Investigation Summary Report will be generated and submitted to NYSDEC. Proposal also includes submission of a surrounding area site map including piping and remote fill locations. Proposal also included site plan with UST and proposed boring locations. No investigation proposed are former remote fill as staining in boiler room (which is approximately 8' below grade) is adjacent to former UST location and not remote fill. Marrone also noted that PBS Registration will be amended by Controlled Combustion. Vought drafted and sent approval letter of Plan to all parties.

2/8/12-Vought-Received Subsurface Investigation Report dated 2/7/12 via email.

3/6/12-Vought-Reviewed Subsurface Investigation Report dated 2/17/12. Six Geoprobe borings installed on 1/31/12. Site is a 23 story residential building. PBS registration noted UST was closed in place on 5/1/91 and a 5800-gallon AST was installed in an adjacent tank room. Two schools located .25 miles from site. "No. 6 staining was observed coming from the south boiler room wall. Upon inspection, a pump, separator drum and recovery drum was discovered at the parking garage lower level. Oil staining was present in the two sumps that were connected to the system. Refusal at 13-15'bg on schist bedrock and groundwater at depth of 10'bg. "All soil samples exhibited No. 6 oil staining except boring B-5". "Since the building is set onto the rock, perched groundwater on top of bedrock is likely traveling to the deepest point beneath the building sump areas". There was not enough groundwater for collection of a groundwater sample. Soil analyticals show: 1900ppb ethylbenzene(B1 9-12'bg), 1660ppb xylene(B1 9-12'bg), 17,000ppb naphthalene(B1 9-12'bg), 1500ppb ethylbenzene(B2 9-12'bg), 1300ppb xylene(B2 9-12'bg), 460ppb xylene(B3 9-12'bg), 1500ppb ethylbenzene(B4 9-12'bg), 1700ppb xylene(B4 9-12'bg), 13000ppb naphthalene(B4 9-12'bg), 2800ppb ethylbenzene(B6 9-12'bg), 2600ppb xylene(B6 9-12'bg), 26000ppb naphthalene(B6 9-12'bg). "MEG believes that the No. 6 oil spill extent has not been completely defined". Report recommends submission of a possible workplan. Vought called Marrone (Ph:845-569-1200) and agreed to installation of one monitoring well adjacent to former UST location with biweekly monitoring and quarterly sampling. Vought sent and e-doc'd letter requiring installation of one well next to former UST. Letter sent via email and mail and called and spoke to Bluttal and explained same.

4/19/12-Vought-Vought received call from and spoke to Marrone and one inch well was installed and on 4/9 well was gauged and inch of product in well. Well installed at former boring location B-3. Groundwater not at 10' bg as previously submitted but at 6" below grade. Marrone will submit site plan with well location and summary letter to DEC within two weeks.

6/5/12-Vought-Received call from and spoke to Jerry Williams (Controlled Combustion Ph:718-367-9800x204 email:j.williams@heatingny.com). Williams requested review.

6/19/12-Vought-Reviewed Groundwater Monitoring report dated 4/25 submitted by Miller (Marrone). One inch diameter well installed adjacent to UST with a total well depth of 13'. "Viscous dark oily product was present measuring .10-feet in thickness. No

groundwater sample collected due to presence of free product. Miller recommends installation of recovery wells or sumps to recover oil and active recovery techniques will be discussed in a later work plan. Vought called Miller (Marrone) and Miller is working for Controlled Combustion. Vought and Marrone discussed installation of recovery wells and/or sumps and interim remedial methods (eg manual bailing). VEFR may not be effective due to one inch well and viscous product. Vought called Williams and explained DEC requirements and Vought drafted letter with requirements as well and added to E-docs and sent to Bluttal with cc to Maronne and Williams.

9/4/12-Vought-Received call from Miller (Ferguson)

DEC Requires:

- 1) installation of recovery wells or sumps as per latest Report recommendations
- 2) delineation of contamination (via well or sump survey)
- 3) interim remedial methods until a system is operational (VEFR or bailing).

---

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "KOLLEENY"  
1/12/04. Transferred to J. Kolleeny.

This spill location was wrongly identified as 5 Boro Garage (Randalls Island) in Nov. '04. Based on address, spill most likely occurred at Manhattan 5, 8, & 8A Garage (545 E. 73rd St., Manhattan). Spill transferred from Kolleeny to Imdadul Islam (case manager of Manh. 5, 8 & 8A) on 4/13/05. – JK

3/09/06: This spill transferred from I. Islam to Q. Abidi.

08/18/06: Transferred to SK. According to the URS Bimonthly updates, URS visited the site May 8, 2006 to gauge the wells for free product. Wells MW-05,09,11,19 exhibited free product. On June 29, 2006 URS returned and removed 105 gallons of product/water via vacuum truck from the four wells. – SK

10/27/06 Spill case transferred from S. Kraszewski to J. Maisonave. – JAM

8/29/07 Reviewed free product recovery data for monitoring period through March 2007 in a letter dated May 16, 2007. In May 2006, URS resumed product recovery using a vac truck. URS visited the site again in August and September 2006 and initiated monthly visits in December 2006. Product has been detected in wells MW-05, MW-09, MW-11 and MW-19 with MW-19 exhibiting the greatest product thickness levels (ranging from 0.25 to 1.15 feet). As stated in the URS letter, "Since May 2006 URS has visited the sight eight times with the vacuum truck and product levels have fluctuated but have not demonstrated a decreasing trend." February 8, 2007 product thickness levels ranged from 0.05 feet in MW-05 to 1.15 feet in MW-19. Well MW-11 was inadvertently omitted during the last two site visits but will be included in subsequent visits. URS plans to continue monthly visits using the vac truck until demolition of the facility begins in the Fall of 2007. Excavation and remediation in the tank area should be completed by Fall 2008. – JAM

9/4/07 Spoke to Vinny Alison (phone # (917) 913-1174; email dcaconstltd@verizon.net). He will be removing tanks and he asked what were the requirements. I emailed him the link to DER webpage "Remediation Guidance and Policy Documents." – JAM

10/29/07 Visited the site to witness tank removal. Tanks are located in a former pit used by DOS to store material before it was loaded into the incinerator. The pit was fully enclosed with concrete. The tanks were installed on top of a layer of gravel and then fully encased in even more concrete. During the removal free product (fuel oil) was witnessed below the tanks. The pit should be completely excavated and contaminated material should be removed. I called Jane Staten from URS and left a message. – JAM

11/9/07 In correspondence with DDC, URS and DOS it has been determined that removal of contaminated soil and free product must wait until the demolition contractor has completed its activities, which is expected in June, 2008. At that point there would be 9 – 12 months time available for remedial work since the construction of the new garage will start in Spring of 2009. A site meeting was scheduled for Nov. 27, 2007 with DDC, URS and DEC.

I sent an email to Afsar Samani stating that once the site is accessible to DDC consultants, all contaminated soil and debris must be removed from the tank excavations that were backfilled, and from any future tank removals. Further, DEC is very concerned that UST removals at DDC consent order sites are being done under construction contracts rather than remediation contracts, with the construction contractor being specifically instructed to only remove the tanks and not perform any additional removal of obviously contaminated materials. We request that all UST removals at DDC consent order sites be coordinated with DDC's environmental consultants. At a minimum, provision should be made to have a vac truck on hand so that any product left in the tanks or in the tank excavations can be immediately pumped out, rather than buried under backfill. – JAM

11/27/07 A meeting was held at the site by project managers from URS and NYCDOS consultants. The schedule mentioned above has not changed. Site conditions may limit remediation and construction activities to be performed simultaneously.

I spoke with Harvey Robert from URS and Afsar Samani from DDC about the DEC's position regarding backfilling the tank pits with free product still present. Doing so is a violation of the Navigation Law and the Consent Order. Free product must be removed if present prior to backfilling. – JAM

9/4/08 Reviewed Proposed Product Recovery and Field Investigation Work Plan dated June 18, 2008 submitted by URS. URS proposes to install 13 monitoring wells, 8 in the former waste-receiving pit and 5 outside of the waste-receiving pit, to recover free product which was witnessed during the tank removal in late 2007.

I spoke to Jane Staten at URS, who told me that the demolition of the DOS facility is complete and investigation and remediation can begin. I spoke with Tony Aguero, URS construction manager for the demolition of the DOS facility, and he said three separate areas where USTs were removed also had floating product present which was not removed. I requested a Revised Work Plan from Jane Staten which also investigates those former UST areas along the FDR Drive. Awaiting revised work plan. The June 18th WP is uploaded to eDocs. – JAM

9/8/08 Reviewed Revised Proposed Product Recovery and Field Investigation Work Plan dated Sept. 5, 2008 submitted by URS. In addition to the 13 wells proposed in the June 18, 2008 proposed work plan, URS proposes 10 additional wells (totaling 23) in three separate areas where USTs were removed and free product was witnessed during removal.

I sent an approval letter today. Both the revised work plan and the approval letter are uploaded to eDocs. – JAM

9/30/08 Received a call from Jane Staten at URS on 9/25. Site access issues are delaying the work as per the approved work plan. I called Afsar Samani at DDC today and requested that DDC and URS coordinate with the DOS regarding site access to perform this field work. – JAM

11/10/08 Received an email from Jane Staten of URS. Email states that URS "were just informed by Michael Murphy, DOS Chief of Facilities, that DOS intends to store salt on the western side of the site this winter. Consequently, URS will postpone the installation of the wells on west side of the site until the DOS removes the salt, presumably in the spring.

URS is currently preparing the bid package to install the wells on the east side of the site. This work must be bid because a new gate and ramp are required to access this area.

I sent an email response stating that the wells should be installed no later than the spring of 2009. – JAM

5/11/09 Received a call from Jane Staten at URS. Ten soil borings were advanced in the three former tank vaults located on the side of the site closest to the FDR Drive. Each boring hit refusal at around nine feet and no product or water was encountered. Only one boring had a low PID reading. Recovery wells were not installed in those borings.

I told J. Staten to wait until all of the borings were completed before sending me a report. The rest of the borings will be installed after July 1. – JAM

11/19/09 Reviewed the Free Product Recovery Data through December 2008 submitted by URS dated February 9, 2009. URS visited the site September 26 and December 17, 2008 to inspect the absorbent socks in wells MW-09 and MW-19. In September, both socks were saturated and were replaced. In December, well MW-09 was flooded and the well was not opened, MW-19 did not show any product on the sock and it was left in place.

Reviewed the Free Product Recovery Data through March 2009. URS visited the site on January 15, February 16 and March 16, 2009. No product was observed in January and March. A small amount of product, 0.01 ft, was measured in both wells during the February visit. Report is uploaded to eDocs.

Reviewed the Free Product Recovery Data through June 2009. URS and Franklin Co. advanced several soil borings on May 11, 2009 but no water or product was encountered so permanent recovery wells were not installed. Report uploaded to eDocs.

During this period URS visited the site to gauge wells MW-09 and MW-19 for product on April 16, May 14, and June 11, 2009. In April 0.01 ft of product was detected in MW-09. Approximately 0.25 gallons of product was recovered using a vac truck. In May, 0.06 ft of product was detected in well MW-19 and it was manually recovered; MW-09 was flooded. URS installed an absorbent sock in MW-19. In June, 0.96 ft of product was detected in MW-19 and the absorbent sock was replaced. If a significant amount of product is detected in July, URS will arrange for regular vac truck visits to recover. Report uploaded to eDocs. – JAM

12/22/09 Reviewed the Filed Investigation Summary and Free Product Recovery Data through October 2009 Report submitted by URS dated November 24, 2009. On May 11, 2009, nine soil borings were advanced, three in each of the three former tank vaults. The work plan called for the installation of product recovery wells; however no water or product was encountered so no wells were installed. Each boring was advanced to approx. eight feet, which was the depth of refusal on the apparent bottom of the tank vaults. No soil samples were collected.

Between September 27 and 22, 2009, 11 monitoring wells were installed throughout the site. Soil samples were collected from MW-33, MW-35, MW-36. Analytical results showed that Total Xylenes in boring MW-33 exceeded TAGM. Each of the three soil samples exhibited SVOCs at concentrations above TAGM. Groundwater samples were collected from 10 of the 15 wells (4 were flooded and one, MW-19, contained free product). Analytical results showed ND concentrations of VOCs and SVOCs in 5 wells. The remaining 5 wells had VOC concentrations ranging from 16ppb in MW-08 to 3,722ppb in MW-33. Naphthalene was detected above criteria in 3 wells. No other VOCs exceeded criteria.

URS conducted free product recovery from wells MW-09 to MW-19 throughout the months between July and October. Well MW-19 shows the highest levels of free product ranging from 0.29ft on July 14 to 6.08 feet on September 17.

URS concludes that since bedrock is shallow and available soil data show little contamination, there is a small dissolved phase plume located in the southwest region and product is observed in 2 wells, that the focus of future activities will be

groundwater. This report is uploaded to eDocs. – JAM

11–10–2010 The spill was transferred from J. Maisonave to Alex Zhitomirsky, as per V. Brevdo/J. Kolleeny. AZ

4–5–2011 Reviewed Groundwater Monitoring and Free Product Recovery Data. Free product in MW–19 varied from 0.88' to 3.27'. VOCs were found in MW–04 at 1,302 ppb (total VOCs). An e–mail was sent to K. Shenahan/M. Asbagh and V. Brevdo:

"Dear Kevin, I have reviewed Groundwater Monitoring and Free Product Recovery Data for the above site. URS recommended installation of ORC socks in several wells. This recommendation is approved. AZ

4–6–2011 Reviewed Groundwater Monitoring and Free Product Recovery Data dated Feb. 14, 2011. The highest VOC contamination was found in wells MW–04, MW–22 and MW 33 ranging from 175 ppb to 769 ppb. An e–mail was sent to K. Shenahan: "Kevin, Sampling at wells MW–15, MW–24, MW–35 and MW–26 could be discontinued."

Also, the following e–mail was sent to K. Shenahan, V. Brevdo and M Asbagh: "Dear Kevin, This site has free has product. As per our February 17, 2011 meeting, a tank inventory should be compiled for this and other URS sites. The inventory should be compared to the PBS tank Registry and all discrepancies should be clarified.

Excavation should be considered for tanks closed in place. If tanks are excavated, contaminated soil should be removed and post excavation samples taken." AZ

11–22–2011 An e–mail was sent to K. Shenahan/V. Brevdo/M. Asbagh: "Dear Kevin, I have reviewed Groundwater Monitoring and Free Product Recovery Data for the monitoring period of December 2010 through February 2011 and received by DEC on August 9, 2011.

The report stated that free phase has been detected in well MW–19 and varied from 0.3 feet to 1.88 feet. Concentrations of dissolved VOCs have increased. The highest concentrations were detected in well MW–33 at 2,400 ppb. Free phase product in MW–19 is not delineated. Delineation wells should be installed. Sampling from well MW–36 could be discontinued.

There are fill ports located on East 73rd Street. These fill ports could be a source of free product. The fill ports should be removed and contaminated soil excavated, if feasible. Also, other fill ports at the site should be located and excavated, if feasible. All fill ports should be shown on a plan.

In the email dated April 4, 2011, I requested that the tank inventory be completed and discrepancies clarified. As of October 2011, the status of many tanks is not clear. The reconciliation should be completed and all discrepancies resolved. Next monitoring report should contain full reconciliation of the USTs records. Corrected information should be submitted to DEC PBS Unit. Excavation should be considered for tanks closed in place.

Sincerely, "AZ

2–2–2012 Reviewed report dated October 18, 2011. Product thickness in well MW–19 varied from 0.13 feet to 1.11 feet. An estimated 14.75 gallons of product were removed from MW–19 during the three month period ending May 2011 compared to 4.25 gallons collected during the previous period. The following e–mail was sent to K. Shenahan/V. Brevdo/M. Asbagh: "Dear Kevin,

I have reviewed a a monitoring report for this site for the period of March through May 2011 and dated October 18, 2011. The report stated that product thickness in well MW–19 varied from 0.13 feet to 1.11 feet.

In my previous e–mail dated November 22, 2011, I stated that there are fill ports located on East 73rd Street. These fill ports could be a source of free product. The fill ports should be removed and contaminated soil excavated, if feasible. Also, other fill ports at the site should be located and excavated, if feasible. All fill ports should be shown on a plan. I also reiterate this request.

In the email dated April 4, 2011, I requested that the tank inventory be completed and discrepancies clarified. As of February 2012, the status of some tanks is not clear. The reconciliation should be completed and all discrepancies resolved. Next monitoring report should contain full reconciliation of the USTs records. Corrected information should be submitted to DEC PBS Unit. Excavation should be considered for tanks closed in place.

Sincerely,  
Alexander Zhitomirsky"

I also discussed this site with K. Shenahan over the phone including January 9, 2012 Monitoring Report. It was decided that URS will propose delineation wells south and west of MW-19 and north and west of well MW-5 (containing free product). URS has achieved some progress in USTs reconciliation. They will complete the reconciliation process. AZ

2-13-2012 Email from K. Shenahan:"Alex,  
Harvey Roberts contacted the URS Project Manager who was in charge of the demolition of this site to inquire about the status of the fill ports/piping. These tank components were removed from the site (see below). In addition, we learned that all of the tanks were removed. We will revise the Petroleum Storage Tank Inventory section for future reports based on this information.

Regards,  
Kevin J. Shanahan  
Project Manager  
URS Corporation – New York  
77 Goodell Street  
Buffalo, New York 14203  
kevin.shanahan@urs.com  
Office: 716-923-1215  
Cell: 716-480-7352

From: Roberts, Harvey  
Sent: Friday, February 03, 2012 3:00 PM  
To: Shanahan, Kevin; English, Michael; McCall, Don; McDaid, Daniel; Burmeier, Tim; Ung, Leng  
Subject: RE: Manhattan East 5,8,8A sp.#0001929  
Kevin,

According to Tony Aguero, the URS employee who was the project manager for the URS CM demolition project at ME 5/8/8A, they removed every tank at the site, and removed every fill line and all associated tank piping.

Harvey Roberts  
(718) 786-3838"

I asked Kevin Shanahan to locate the closure reports and see if they indicate that the fill ports and piping was removed. Also, an inspection might be needed to see if the fill ports located off site and indicated on the site maps are, in fact, removed."

7-5-2012 The following e-mail was sent to K. Shenahan/M. Asbagh/V. Brevdo:"Dear Kevin,

I have received a groundwater monitoring report for the fourth quarter of 2011 and the first quarter of 2012, dated May 8, 2012. The report stated that free product is present in wells MW-05 and MW-19. At the request of the DEC, the work plan, included in the report, proposed installation of four additional wells to delineate the free product plume. This work plan is approved.

However, in order to fully delineate the off-site plume, wells should also be installed south of MW-19 (downgradient direction). Also, as per our telephone conversation on July 5, 2012, a modified site plan should be submitted to DEC. If soil or decomposed bedrock is encountered during drilling operations, it should be collected and analyzed in a laboratory for the presence of VOCs and SVOCs.

Please note that the Responsible Party and its contractor(s) are solely responsible for the safe execution of this work.

Sincerely,

Alexander Zhitomirsky  
Engineering Geologist 2

## DEC Investigator Remarks:

9/21/05 spoke with James Wood from the hospital. Mr. Wood is seeking to close out spill. He was informed that he needs to submit  
1) Copy of a work order saying either the lines had been repaired or replaced, 2) Copy of a new system test report showing the system passed. SR

Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL C"  
6/30/99 Report forwarded to Sangesland. Caller stated that the building is being sold and the tanks were retested again and failed. System was isolated. Caller says the tank is OK, but both the supply and vent lines failed. Sangesland informed the caller that they need to submit 1) Copy of a work order saying either the lines had been repaired or replaced, 2) Copy of a new system test report showing the system passed.

Caller says work will be done ASAP because it's holding up the building sale. Ref: spill# 0002384.

4/12/04--Vought--Spill transferred from Sangesland to Rommel as per Rommel.

08/13/12 - LZ

As Randy Austin requested, the spill has been reassigned to Tim DeMeo

**Caller Remarks:**

DISCOVERED WHILE RETROFITTING UST'S. CONSULTANT – GROUND WATER TECHNOLOGY HIRED, PAUL MUSS (516)472-4000

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ROMMEL"  
4/12/04-Vought-Spill transferred from Miller to Rommel as per Rommel.

September/October 2005. Spoke to John Bolger, property manager (201-307-2561). He referred me to Susan Pinera, environmental person (201-307-2547). She was unable to find any files about the spill and had no information about it.

4/27/07: Case reassigned to Carlson. Received email from Timothy Egan (tegan@hertz.com): "Regarding 64th Street site, we have identified some files for the UST upgrade that occurred in 1992, hopefully the file will shed some light on the subject. The dead storage files are not stored here, we have requested the box be sent to my attention, I expect to have it early next week."

6/5/07: Emailed Timothy Egan to followup.

Received email from Timothy Egan : "I was able to locate files regarding this site. The release was reported related to a UST replacement that occurred at the site. It appears some petroleum-impacted soil was removed before the excavation was halted (in concurrence with the NYSDEC inspector on site) due to concerns about the stability of the building. I am reproducing the file and will forward it with a cover letter later this week."

6/11/07: Received old tank closure report dated 10/22/1992. Endpoint samples showed soil impact remained. Excavation was halted because additional excavation would have compromised the structural integrity of the building.

4/2/08: Sent stipulation agreement and assessment required letter to Timothy Egan of Hertz. Signed stipulation agreement due on 5/1/08.

5/8/08 – Carlson: Stipulation agreement effective 5/6/08.

5/29/08 – Carlson: Reviewed an Investigation Plan for the installation of four soil borings/monitoring wells around the tank field and remote fill. Plan approved.

6/30/08 – Carlson: Received email from Tom Bosshard. Delineation scheduled for July 7th.

7/14/08 – Carlson: Received email from Tom Bosshard. Wells were installed successfully.

8/28/08 – Carlson: Received phone call from Tom Bosshard.

9/4/08 – Carlson: Reviewed Subsurface Investigation Report, dated August 18, 2008. High dissolved concentrations. Sent letter requiring a delineation workplan and quarterly reporting. Due 12/4/08.

12/17/08 – Carlson: Reviewed October 2008 Groundwater Monitoring Report. Wells sampled on 10/16/08. Maximum BTEX concentration 5,145 ppb in MW-1. Three well locations proposed. Approved workplan.

3/20/09 – Carlson: Reviewed update report. Well installation delayed for DOT sidewalk permit. Wells sampled on 1/13/09. Maximum BTEX concentration 5,279 ppb (MW1).

4/24/09 – Carlson: Well installation scheduled for 4/28.

6/22/09 – Carlson: Reviewed Additional Subsurface Investigation Report dated 6/15/09. Three monitoring wells installed in April 2009. No soil or groundwater impact found. RAP due 8/3/09.

8/19/09 – Carlson: RAP approved – regenox application in three injection wells.

10/29/09 – Carlson: Reviewed August 2009 Groundwater Monitoring Report. Wells sampled on 8/25/09. BTEX 1,701 ppb in MW1. Injection wells have not been installed yet – delayed for DOT permit.

1/20/2010 – Carlson: Reviewed November 2009 Monitoring Report. Wells sampled 11/9/2009. General decrease in contaminant concentrations. IP 1,2,3 were installed. Regenox injection planned for January 2010.

4/15/2010 – Carlson: Reviewed update report. Regenox injected in February 2010. Sells sampled in March. Slight increase in contaminant concentrations resulting from Regenox use. Additional Regenox injection planned for April 2010.

8/3/2010 – Carlson: Reviewed May 2010 update report. Regenox injected in April 2010, additional event planned in July 2010. ORC sock to be installed in MW2 in July 2010.

10/25/2010 – Breen. August 2010 G/W Monitoring Report received on 10/14 and filed in e-docs. Regenox injected on August 13 2010 through three injection points. Two ORC socks were installed in MW2 at the same time. Dissolved VOC concentrations in on-site well 2 and off-site well 1 were detected at continued steady decreases as compared to the results of previous sampling events. Next sampling event is scheduled for November 2010.

4/4/2011 – Breen. Feb 2011 G/W Monitoring Report received on 4/1 and filed in e-docs.

04/22/11: This spill case transferred from G. Breen to J. Kolleeny. – JK

08/10/11: Reviewed GW Monitoring Rpt for May 2011 by EnviroTrac, submitted 6/15/11 (in eDocs). Rpt summarizes GW sampling event on 5/31/11, after addt'l rounds of RegenOx injections were performed earlier on May 5 & 19, 2011 (injections were previously performed in February, April and August 2010). GW sample results show dramatic decline in contaminant concentrations in well MW-1, which has consistently been most significantly impacted well at site. Based on data, EnviroTrac recommends spill closure. I sent email (in eDocs) to Timothy Egan of Hertz, cc to Tom Bosshard of EnviroTrac, requesting an addt'l round of GW sampling to confirm decrease in contaminant levels and demonstrate that levels will not rebound; I wrote that wells MW-4, MW-5 and MW-7 may be omitted from this sampling round, and that results should be presented in GW monitoring rpt with recommendations for further monitoring or spill closure as appropriate based on data. – J. Kolleeny

12/21/11: Reviewed GW Mon Rpt for August 2011 by EnviroTrac, submitted 10/5/11 (in eDocs). Rpt presents results of post-injection GW sampling performed in Aug. 2011. GW data show increase in worst well, MW-1, from 5.2 ug/L total BTEX in May 2011 (right after injections) to 436 ug/L tBTEX in Aug. 2011 (well had 2,148 ug/L tBTEX in Feb. 2011 prior to injections). No significant impacts in any other wells. Rpt states that monitoring/sampling of wells MW-1, MW-2, MW-3, & MW-6 will continue on quarterly basis to evaluate effectiveness of injections, and all site wells will be gauged quarterly. Next sampling event to be conducted in Nov. 2011. On 12/20/11, I sent email to Tom Bosshard of EnviroTrac: "Tom, I've reviewed Aug. 2011 GW Monitoring Rpt for this site, and I noticed that in this rpt, as in many other EnviroTrac rpts, Table 2 – Summary of GW Sampling Analytical Results includes line for Total BTEX, but not for Total VOCs. (Table does include results for individual compounds other than BTEX.) Would it be

possible to include a line for Total VOCs in GW sample results tables in future EnviroTrac rpts?" On 12/21/11, received email reply from Tom: "Jon, We can certainly add a Total VOCs row to our data tables. All rpts going forward will include this data." – JK

03/20/12: Reviewed Nov. 2011 GW Mon Rpt by EnviroTrac, dated 12/23/11 (in eDocs). Results of Nov. 2011 GW sampling show MW-1 (only well with significant impacts) had 3,048 ug/L total VOCs, up from 810 ug/L tVOCs in August 2011 (but below tVOCs of 3,973 ug/L in Feb. 2011 and initial sampling result of 18,180 ug/L tVOCs in July 2008). Contam does not appear to be migrating off-site. Rpt states that quarterly monitoring/sampling will continue to monitor long-term effectiveness of May 2011 RegenOx and ORC Advanced applications. Next quarterly sampling event scheduled for February 2012. – J. Kolleeny

06/27/12: Reviewed Feb. 2012 GW Mon Rpt by EnviroTrac, received 3/28/12 (no transmittal sheet or issuance date)(NOT in eDocs, await revised pdf). Results of Feb. 2012 GW sampling show MW-1 had 4,923 ug/L total VOCs (up from 3,048 ug/L in Nov. 2011); no other wells had significant contam. I contacted Gavin Zollo of EnviroTrac, asked that rpt be revised to include issuance date, to correct text in Conclusions section where "November 2011" is referenced instead of Feb. 2012, to correct GW flow arrow on Fig. 3 (or if possible to include water table contour map in each rpt based on latest gauging data), and to include recommendation to address contam in MW-1. Gavin said they're currently preparing rpt for May 2012 GW sampling event, and will send revised Feb. 2012 rpt along with that rpt, addressing my comments. – J. Kolleeny

---

Caller Remarks:

3000 gal outside storage tank is leaking

---

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "M TIBBE"  
UST. Oil coming into bldg. HazMat & IWCS. Eastmond in route. 250gallons unaccounted for. Eastmond to Vacutest lines.

8/15/05 – Haggerty – spoke with Rene Lewis of AI Eastmond (718)–378–7000, he will send documents if they can be found

12/19/2005: Searched property shark and nycserv.nyc.gov. Could not find the owner. Site visit may help to close the spill.  
(Sadique)

06/07/2006: File transferred to John Grathwol. Possible to close after site visit. (Sadique)

Previous note by Sadique Ahmed

Spill transferred back to Region 2

3/10/08 – Austin – Spill assigned to Ahmed for followup – end

10/27/11 – Austin – Spill Transferred from Ahmed to Vought – end

Caller Remarks:

SPILL IS CONTAINED; DISCOVERED DURING DRILLING; NOT YET CLEANED; 207587

DEC Investigator Remarks:

207587 and 207590. see eDocs

8/15/07: Spoke with Kerri-Ann Southwell, EH&S Manager for E74th St station. While drilling structural boring B-8 encountered weathered #6 oil at 3'4" down to a depth of 9' and continuing. Structural borings are being advanced in anticipation of construction of the York Ave Substation at the facility. See also spill no. 0705593. (JHO)

8/17/07: e-mail from Con Ed (Southwell):

"Below are the lab results from borehole #8A, DEC Spill # 0705593 (emis # 207590), which indicate presence of lube oil. Please note that this boring was continued and no further evidence of petroleum contamination was detected. In that boring location depth to bedrock started at approximately 2 ft bg and continued to approximately 9 ft 7 inches bg (where boring was terminated)." See eDocs for lab results. (JHO)

8/17/07: second e-mail from Con Ed (Southwell): "I just updated emis 207590 (Spill # 0705593) for 74th St with the following, please let me know if you have any questions. While drilling B-9, approximately 12 ft South of B-8, evidence of petroleum odors was detected in weathered bedrock core. The core section was from 5 ft 2 inches to 7 ft 6 inches. Petroleum odors not detected throughout entire core, just a small section that was broken apart." (JHO)

8/20/07: e-mail to Con Ed (Southwell): "Please clarify: boring 8A, also called boring 9 in the emis report (emis no 207590, DEC no. 0705593) went to what depth? No further contamination was noted in 8A beyond 9' (so thickness of contaminated layer was from about 5'2" to 7'6"?)". Was there any visual evidence of contamination in this boring, or just "petroleum odor"?

In boring 8 (emis no. 207587, DEC no. 0705588) went to what depth? Was there any further oil contamination ("weathered #6 oil") below the 9 foot depth? Was a sample collected from this boring for oil ID?" (JHO)

8/22/07: e-mail from Con Ed (Southwell):

"Below I try to explain in more detail the 3 boring locations where we got hits for evidence of petroleum contamination. I'm in the process of updating the emis reports, which will be forwarded to you. Plus, I will forward the lab results from our borings.

EMIS 207587 (DEC # 0705588) and EMIS 207590 (DEC # 0705593)

While doing structural borings for the future York Substation, evidence of petroleum contamination and/or petroleum odors were detected in three(3) separate boring locations. (See details below). All three borings were in relatively close proximity to one another and all under the "T-11" area of the plant. Lab analysis (see Lab sequence numbers 07-07501, 07-07502, 07-07541) also indicates the petroleum to be a type of lubricating oil.

Con Ed requests emis 207590 (DEC # 0705593), be closed out and cross referenced to emis 207587 (DEC # 0705588).

B-8 Petroleum contamination encountered at 3 ft 4 inches until approximately 9ft, where boring was terminated. (All sand, no bedrock - substance black weathered #6 oil like) Lab results (LSN 07-07541, to be a heavy lube oil, like gear oil).

B-8A Evidence of shallow petroleum contamination encountered at approx. 9 inches, no further contamination encountered. Bedrock in this boring encountered at approx 2 ft below slab and extended to approx. 9 ft 7 inches, where borehole was terminated. (LSN 07-07501 no PCBs, and LSN 07-07502 lube oil).

B-9 evidence of petroleum odors encountered in weathered bedrock from approximately 5 ft 2 inches to 7 ft 6 inches. Borehole was terminated at 12 ft 6 inches with no further evidence of petroleum contamination or odors." See eDocs for lab results. (JHO)

8/23/07: e-mail from Con Ed (Southwell): "For your convenience I've update the 2 emis reports (see attached) and now emis 207590 is ready to submit for DEC approval. Please take a look and let me know if you would like for me to add anything additional. Again, we would like to close out and consolidate emis 207590 to the original emis 207587, because all borings were done in relatively close proximity to each other and lube oil (heavy

and light) was the  
contaminant detected." See eDocs for 2 reports. (JHO)

8/27/07: e-mail from Con Ed (Southwell): "This past Saturday, 3 core holes were drilled to 18 inches below the slab in the kerosene impacted area, west of the tank room. These core holes are done first and then the drill rig goes back to these areas and drills to approximately 10 ft into the bedrock. In three areas kerosene odors were detected. These are in relative area of Langan's GP5N, GP5N1 and GP5N5." See spill no. 0607574 for further details regarding this area. (JHO)

8/31/07: e-mail from Con Ed (Southwell): "more kerosene odors were detected in B-1 approximately 2 ft below slab. We believe this location to be very close to Langan's GP5N6 hole and in the impacted area." See sp 0607574. (JHO)

9/5/07: sent e-mail to Con Ed (Southwell) requesting drawing of boring locations. (JHO)

9/9/07: e-mail reply from Con Ed (Southwell): "as soon as we receive the as-built drawings from our contractor, I'll forward that along to you." (JHO)

9/10/07: e-mail to Con Ed (Southwell): "What is the time frame for the as-built? Was the boring work undertaken without a drawing showing proposed locations?" (JHO)

9/13/07: Spill number 0705593 has been closed and sp 0705588 will be used to track all investigation and remediation related to geotech borings. (JHO)

9/18/07: sent second e-mail to Con Ed (Southwell) requesting drawing of boring locations. (JHO)

9/18/07: e-mail reply from Con Ed (Southwell): "Our contractor will be returning late this week or early next week to complete his survey of the boring locations. I will get an ETA on completion of the drawing this afternoon. The borings were completed off of a drawing that showed proposed locations which were adjusted in the field to meet existing conditions."

I responded as follows: "In the meantime can you mark up a copy of the drawing that Langan prepared for the kero tank area and show the approximate locations of the new borings?" (JHO)

9/26/07: response from Con Ed (Southwell): " Attached is Langan's map, where I hand written in the approximate locations where kerosene was detected during the structural borings in the basement. This map doesn't include the locations under T-11, because Construction is still waiting on as-builts from their vendor." See eDocs for sketch. (JHO)

WHILE DRILLING INTO CONCRETE, AS DRILL BIT WAS REMOVED FROM GROUND, KERESENE RESIDUE WAS DISCOVERED: FURTHER INVESTIGATION  
 PENDING: CONED # 202750

**DEC Investigator Remarks:**

Con Ed no. 202750 – see eDocs.

10/19/06: Investigation / Remedial action work plan received from Angel Chang (Con Ed remediation) – plan prepared by Langan Engineering. Contacted Chang by phone to relay the following comments:

- 1) All sample results must be compared to TAGM instead of STARS.
  - 2) Provide a map and/or sketch of the area where the remedial investigation will take place.
  - 3) Provide more detail in plan regarding number of borings proposed, locations, etc.
  - 4) Plan must be signed/stamped by PE.
- (JHO)

10/23/06: Langan submits revised plan, which does not address items (2) and (3), above. Sent e-mail to Michael Burke (Langan project manager) requesting a map and information regarding the number of borings and locations. (JHO)

10/24/06: Langan submits site plan showing boring locations. E-mailed Burke comments:

"The drawing is not complete. It needs to include the following information:

1) The drawing shows 12 boring locations, but your e-mail indicates that only 5 are proposed initially. Which 5 are the initially proposed borings?

2) The location of the initial finding of oil should be shown, so that the adequacy of the boring plan can be assessed." (JHO)

10/25/06: revised drawing submitted which addresses all comments. E-mail approval sent to Angel Chang. (JHO)

11/3/06: Formal approval letter for RI/RAWP sent. (JHO)

11-8-06. Breen met with Plt EH&S Manager, Kerri-Ann Southwell, Angel Chang, Frank Radoslovic, Jimena Ibanez and Michael Burke, consultant from Langan. Investigation of stained soil and odor will continue with borings into concrete floor to delineate extent.

11/10/06 – e-mail from Langan (Michael Burke) to DEC Breen:

"As we discussed on Wednesday, November 8, 2006, the work proposed in response to the kerosene spill in the basement of the East 74th Street Station (NYSDEC Spill No. 0607574) will proceed as detailed in the NYSDEC approved work plan, dated October 24, 2006.

Additional actions

that were not addressed in this work plan due to unforeseen conditions include the following:

"1. Remedial action will not be performed concurrently with the investigation. A proper delineation will be completed following the same investigation procedure described in the RI/RA Work Plan. After the impacted area has been delineated, impacted concrete will be removed, to the extent practical without compromising structures associated with kerosene pumps and secondary containment walls, and will be restored to its original state.

"2. Slab water samples will be collected for waste characterization parameters, including TCL VOCs and SVOCs, PCBs, TPH, and oil and grease. In situ pH measurements will also be collected from selected sample locations. The intended disposal option for slab water is to first be treated through Con Edison's on-site oil/water separator and then discharged under Con Edison's existing SPDES permit."

12/1/06: Con Ed (Angel Chang) e-mails copy of Langan's 11/22/06 summary of investigation and proposed RAWP, along with following:

"We have completed the investigatory phase of our workplan. However, we have not started implementing the remedial phase yet due to unforeseen events during the first phase. Enclosed for your information, find the latest proposal provided by Langan to proceed. Also, I am enclosing 2 drawings (we will have these drawings for you at the station). I would like to have either of you or both to come to the Station for Langan and us to make you a presentation of our findings and how we are proceeding next (we have made some assumptions we would like to run by you)." Due to technical glitch, I was unable to open the 11/22/06 document. Langan agreed to forward a new copy to me directly.(JHO)

12/5/06: Langan (M. Burke) e-mails "Remediation Scope of Work" (RAWP Addendum no. 1) for review and approval. (JHO)

12/29/06: e-mail to Con Ed (Chang, Southwell, Cohen) and Langan (Burke): "I have reviewed the revised RAWP dated December 5, 2006 for the East 74th St. station and find it acceptable to complete remedial action for NYSDEC spill no. 0607574." (JHO)

1/12/07: meeting is held at the 74th Street Generating Station among DEC (O'Connell, Breen), Con Edison (Southwell, Chang, Cohen, Lombardi, Musto, O'Donnell) and Langan (Burke). Discussed results of investigation around tank room, and requested additional delineation to the east and northwest of the tank room. Langan to put together a scope for additional borings. (JHO)

1/16/07: Langan (Burke) submits meeting minutes, which will serve as agreement to revised scope as requested by NYSDEC in Jan. 12 meeting. (JHO)

1/23/07: supplemental investigation work began – a total of 9 additional borings are being installed. (JHO)

5/7/07: received supplemental RI report and RAWP Addendum no 2. (JHO)

5/23/07: completed review of supplemental RIR and RAWP Addendum no. 2. Based on results, additional area to be excavated to the east of the tank room. Called Langan (Burke) to tell him that he needs to submit revised Figure 1 from December 5, 2006 RAWP Addendum (proposed remediation areas). (JHO)

6/11/07: RAWP addendum no. 3 (revised drawing) received from Langan. (JHO)

7/12/07: RAWP addenda 1, 2 and 3 approved. (JHO)

8/27/07: e-mail from Con Ed (Southwell): "This past Saturday, 3 core holes were drilled to 18 inches below the slab in the kerosene impacted area, west of the tank room. These core holes are done first and then the drill rig goes back to these areas and drills to approximately 10 ft into the bedrock. In three areas kerosene odors were detected. These are in relative area of Langan's GP5N, GP5N1 and GP5N5." These borings were installed as part of geotechnical investigation for proposed new substation. Findings of earlier contamination in these geotech borings can be found in sp 0705588. (JHO)

8/31/07: e-mail from Con Ed (Southwell): "more kerosene odors were detected in B-1 approximately 2 ft below slab. We believe this location to be very close to Langan's GP5N6 hole and in the impacted area." (JHO)

9/5/07: sent e-mail to Con Ed (Southwell) requesting drawing of boring locations. (JHO)

9/9/07: e-mail reply from Con Ed (Southwell): "as soon as we receive the as-built drawings from our contractor, I'll forward that along to you." (JHO)

9/10/07: e-mail to Con Ed (Southwell): "What is the time frame for the as-built? Was the boring work undertaken without a drawing showing proposed locations?" (JHO)

see spills 0713073, 0712848 and 0705588.

2/24/12 – Obligado – Spill reassigned from O'Connell to Obligado

3/27/12 – Obligado – I completed review of the Supplemental Site Investigation Report. The report documents the installation and sampling of 7 monitoring wells at the site. During installation of MW2S. "Soil was visibly stained black with a petroleum-like odor." PID readings up to 470 ppm. During the installation of MW2R "soil was visibly stained with a petroleum like odor." PID

readings were up to 185 ppm. During installation of MW7R langan did not observe any petroleum like odors but soil was stained black. According to the report, no soil samples from the well installations exceeded CP-51 soil cleanup levels for Industrial Use. According to the report, VOC and SVOCs were not detected in ground water samples. The report recommended closure. After discussion with DEC Ketani, Hussein, O'Connell, determine spill will not be closed and remediation is required due to presence of free product in the slab.

3/30/12 – Obligado – I sent a letter to Barry Cohen of Con Edison disapproving of spill closure and requiring implementation of approved RAWP.

3/30/12 – Obligado – Email from Barry Cohen, "Andre – Mariela and I will discuss this with our consultant and the rest of the Con Edison team before responding. However, before we do, we need a better understanding of the reasons for the Department's decision not to close the spill in question and whether the Department believes that the previously approved RAWP should be implemented at this time.

Once we receive this information and have an opportunity to discuss this matter with our team, we may request a meeting with the Department to discuss possible alternatives."

4/5/12 – Obligado – After discussion with DEC Ketani, Hussein, O'Connell, I sent a letter in response to Barry Cohen. Nav Law requires containment of discharges of petroleum. Petroleum at this site has not been contained and has migrated through the slab and to underlying soil and fractured bedrock, therefore clean-up is required. Nav Law requires prompt cleanup so Department will not approve delaying clean-up until 2020. Letter in edocs.

4/24/12 – Obligado – DEC met with Con Edison at the site to discuss DEC requirements. They provided a site synopsis and presented additional information, such as additional waste characterization sampling data, ground water sampling data, and crosssection diagrams showing impacted areas, to support their position that the case should be closed. The additional ground water sampling was done in April and all wells were non-detect except for one compound which also appeared in the up-gradient well and may represent back ground conditions. We also did a site walk through of the generating station areas of concern. DEC informed Con EdDER will discuss internally.

5/30/12 – Obligado – I reviewed the Waste Characterization report. Six test pits were done in preparation for impacted slab removal. Based on the analysis, only one sample had an exceedence of CP51 soil clean-up criteria and the exceedence was slight. After review of the materials and based on post meeting internal discussions on 5/24/12 I sent Con Ed a letter requiring one additional monitoring well in the most impacted area, GP5-N1 which had 0.25 ft product during the initial investigation. (The closest well to this location was upgradient and 30 feet away) If the well is clean than the case may be considered for closure.

Caller Remarks:

CALLER STATES THAT THERE IS OIL SEEPING INTO HIS BASEMENT FROM AN UNKNOWN SOURCE.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "M TIBBE"

SPOKE WITH STEPHEN, CON ED POWER PLANT IS NEXT TO THIS BUILDING AND ON THE OTHER SIDE OF IT THERE IS A PRIVATE SCHOOL. OIL IS SEEPING INTO THE BASEMENT. HE DOESN'T KNOW WHERE IT IS COMING FROM. THE BUILDING DOES NOT HAVE ANY OIL TANKS. IF HE IS NOT AVAILABLE, SPEAK WITH DOMINICK CAMILLERI, THE SUPER; OR JOSE GRIMES, WHO IS THE MANAGEMENT AGENT FOR THIS BUILDING AT THE SAME NUMBER GIVEN PREVIOUSLY. 2:00 PM. (AZ?)

3/4/99, 3:10 PM: Con Ed Chem Lab sent to building to take sample of oil for petroleum ID. (JHO)

4/27/99 – spoke with Mark Tibbe – material has been identified as hydraulic fluid from the condo's elevator ststem. no CON Ed involvement. Copy of file given to Tibbe. (JHO)

8/2/05– temperary transferred lead to Woodward

8/26/05– reveiw of file showed that site visit and possible sampling maybe required. put in call to Mr. Joe Grimes and left message.

11/21/05 never recieved return calls to messages.

2/27/06 sent letter requesting information from property owner of record. site visit and possible sampling maybe required to close site.

4/1/09 – Austin – Transferred from Needs Reassignment to Zhune for further work to remediate and close – end

Spill Date	Date Cleanup Ceased	Cause of Spill	Meets Cleanup Standards	Penalty Recommended
01/17/2000		UNKNOWN	NO	NO

Material Spilled	Material Class	Quantity Spilled	Units	Quantity Recovered	Units	Resource(s) Affected
KEROSENE	PETROLEUM	100.00	GALLONS	0.00	GALLONS	SOIL

**Caller Remarks:**

spill from above location, unknown what source and cause was. spill may affect east river. a. vicinanza, keyspan employee did observe site. crew to start managing site.

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

Tom Smith – manager of GT site (718) 706-2791

2/7/00 – Saccacio – Initial spoke to Tony Vicinanza who explained that there was no product in the river and that they believed that the source of the spill was from above ground filters. Clean Harbors was enroute to conduct the cleanup. One hour later I received a spill report (Spill # 9912004) from the FDNY indicating that the product source is from a broken pipe under the ground. I called Keyspan again and they would not speculate as to location of the leak. I instructed them to drain the line of any static product but they claimed the line capacity was negligible (less than 5 gallons). I called Randy and He requested I go out to the site in the morning. On scene the following morning I instructed \_\_\_\_\_ to check a nearby monitoring well and found 4.4' to top of prod and 7.7 to top of water indicating 3.3 feet of product. According to the Env. Consultant who recently installed the well it previously had only a few inches of product in it. Also on scene was:

2/18/00: Mark Tibbe rec'd update from Mike Lauro, KeySpan.They

pressure tested piping from Kerosene tank leak from yesterday.

Found a filter leaking. Excavated and found contaminated soil.

Will continue to test lines. Will try to minimize use of

kerosene.

2/3/05 – Austin – transferred spill from O'Connell – received some documentation from LIPA (Bart Polizotti) showing line testing, but no info on contaminated soil – needs further info/review – end

6/21/06: Talked to Bart Polizotti (516–545–5511) concerning spill. He said that all information regarding the spill and tank tests have been submitted already but no word on the soil contamination. Referred to Kenneth Jaeger, the site tech EHS Manager of Ravenswood who was unavailable at the time of call.

8/9/2006: Next action – contact Kenneth Jaeger at 718–706–2702 to get site cleanup status. Site visit might be warranted in the near future. JWA, NYSDEC–Albany

10/29/10 – Austin – Reassigned from Antonizio in Albany to Patel in Region 2 for following up and closing – end

12/13/10–Hiralkumar Patel.

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"  
 ACCORDING TO RICHARD ROACH, THE OIL SPILL IS WITHIN CON-ED FACILITY. NO PUBLIC IMPACT.

**CON ED E2MIS NOTES**

Open excavation for water line installation has filled up with rain water. There is an unknown black fluid floating on the water

and coating the surrounding bluestone. The area has been roped and being monitored for rising level. There are no known leaks apparent from the adjacent fuel oil piping, nor is there any apparent leaking/bubbling up of any more black fluid. Clean up endor being contacted. Station Chem Lab contacted for sampling.

6/16/10 – changed DEC lead from Krimgold to JMOCONN (JOC)

#### DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

6/20/91 : WALTER SCHUMACHER, GEN WATCHMAN WAS REQUESTED, DURING INSPECTION TO REPORT RESULTS OF TEST BORINGS. VINCENT DEPASS REVIEWING REPORTS TO DETERMINE NOTIFICATION COMPLIANCE. MAY TEST FOR PCB'S AND OIL.

11/17/94: REASSIGNED FROM SIGONA TO ENGELHARDT ON 11/17/94.

6/18/98: property sold to KeySpan Energy, which retains responsibility for remediation. (JHO)

4/14/11 – J.kann – DEC lead changed to J.Kann.

**Caller Remarks:**

DUE TO UNK REASONS ABOUT 10 GALLONS OF LUBE OIL SPILLED TO THE EAST RIVER, A BOOM HAS BEEN DEPLOYED.

**DEC Investigator Remarks:**

08/04/09–Hiralkumar Patel.

1:01 PM:– spoke with John. they observed oil sheen in river. Kens marina has deployed booms. currently investigating source.

08/05/09–Hiralkumar Patel.

10:21 AM:– spoke with John. he didn't know anything and transferred to Kevin's voicemail. left message for Kevin.

TransCanada  
 Ravenswood Generating Station  
 38–54 Vernon Blvd.  
 Long Island City, NY 11101

 PH. (718) 706-2773 (O)  
 (347) 461-0004 (C)  
 email: kevin\_fennessey@transcanada.com

10:41 AM:– received call from Kevin. currently they are investigating in the area of lube oil coolers. no source has found yet.

Kevin will call once source found. no more oil/sheen observed in water.

08/06/09–Hiralkumar Patel.

10:09 AM:– left message for Kevin.

2:42 PM:– received call from Kevin. they haven't found source yet. sheen has observed again in water in patches. sheen coming out from main outfall at their facility. booms are in place. they are investigation two possible sources: first lube oil system and second historic transformer oil leak under transformer (where some contamination was left in place under transformer and that could be leaching into water). Kevin collected water sample for product id.

08/14/09–Hiralkumar Patel.

9:17 AM:– left message for Kevin.

08/26/09–Hiralkumar Patel.

1:44 PM:– spoke with Kevin. they got samples results from lab but inconclusive (whether lube oil or transformer oil). they sent second set of samples. sheen/oil is visible particularly during low tide.

08/27/09–Hiralkumar Patel.

1:20 PM:– visited site. met Kevin. no sheen observed at the outfall. booms were at the outfall. Kevin mentioned that oil droplets/sheen is observed during low tide. Kevin mentioned that as first set of sample analysis came back inconclusive, they sent sample of clean boom and dirty boom for analysis to find out product type, but it also came back inconclusive. Kevin mentioned that water tunnel runs next to transformer where spill was reported in 1999 (spill #: 9900155). they found cracks in tunnel wall towards transformer and found some oil coming into tunnel. asked Kevin to send sample analyticals.

3:58 PM:– received email from Kevin with sample analyticals.

11/02/09–Hiralkumar Patel.

11:23 AM:– left message for Kevin to know any more oil from outfall.

3:14 PM:– received call from Kevin. from product sample, they found oil could be cable oil or transformer oil and based on this result, they are doing further investigation. as part of investigation, they sent divers inside tunnel to inspect area where spill happened in 1999, but no sign of leak found there. during further inspection in north end, found sign of oil on tunnel ceiling, in area under one of the transformer. Kevin mentioned that transformer in this area is not in direct contact with tunnel, but there is a basement room between transformer and tunnel. they collected sample of bluestone from underneath transformer to locate any spill that might be travelling along basement wall to the tunnel. asked Kevin to send email with details and results of bluestone analysis, once available.

11/03/09–Hiralkumar Patel.

10:10 AM:– received email from Kevin. still some sheen coming out at frequency of 1–2 drops per minutes, during ebb or low tide. divers were sent in tunnel on 10/21/09 and 10/22/09 to inspect for any leaks and/or traces of oil. no indications of leakage from ConEd's Vernon Substation, which borders on the discharge tunnel's east wall on the south side of facility. crack repairs to the east wall of the tunnel in the vicinity of Unit 10 in 1999 are in good condition and no indication of leakage. no piping or penetrations from Unit 10 show indication of oil discharge to the tunnel. as sheen was coming from upstream of Unit 10, inspected areas under Unit 20 and Unit 30. one crack in the ceiling of the tunnel under a Unit 20 transformer was identified, but inspection of the transformer did not indicate any leakage or spilled oil. some droplets of oil were found under the Unit 30 transformers. ceiling of the tunnel in the area was surveyed, but no leakage path was identified. there is basement underneath

Unit 30 and basement floor is tunnel's ceiling.

Unit 30's two transformers – 3 North and 3 South – were cleaned thoroughly on 10/26/09 and 10/27/09 to ensure that no oil was leaking and feeding the spill. during the cleaning process, it was identified that any liquid in the 3 North transformer bay tended to run off into a bluestone/soil area on the south end of the enclosure. soil samples were taken from this area to determine if there is any oil contamination of the soil.

Divers will be returning on Wednesday, 11/4/09 to perform a more detailed inspection of the west wall and ceiling in the vicinity of Unit 30. two objectives of this dive will be to: 1) collect samples of the oil, if possible, for laboratory analysis and 2) identify an intrusion path for oil into the discharge tunnel.

11/13/09–Hiralkumar Patel.

11:05 AM:– spoke with Kevin regarding soil sample result and result of dive on 11/04/09. Kevin mentioned that there is some contamination found in soil sample and are planning to excavate it. no schedule yet. also there was no oil found during dive on 11/04/09. asked Kevin to send email with updates and soil sample result. also asked to send contact info of person who will receive letter from the department.

11/16/09–Hiralkumar Patel.

9:51 AM:– received email from Kevin including results of soil sample from bluestone area. another dive event was conducted on November 4, 2009 in the vicinity of Unit 30, where traces of oil had been sighted during the previous dive event on October 22. November 4 dive did not locate any traces of oil or identify any likely sources of leak into the discharge. soil sample was collected from area within the 3 North transformer bay and was analyzed for petroleum ID and TPH. results indicate that there is contamination of the soil by transformer oil. Kevin mentioned that they are planning to vacuum excavate the soil from this area with samples for TPH at each foot of depth to determine the extent of the contamination. surface samples will also be taken in the other bluestone areas within the 3 North and 3 South transformer bays.

11/18/09–Hiralkumar Patel.

11:39 AM:– sent letter to Kevin requiring endpoint samples. letter emailed to Kevin.

11/24/09–Hiralkumar Patel. received email from Kevin (at 4:37 PM on 11/23/09). will excavate two test pits in the 3N transformer bay on 11/24/09 and sample the soil at depth intervals to determine the spread of oil contamination.

12/07/09–Hiralkumar Patel.

9:05 AM:– received call from Kevin. they have started removing blue stones from 5 ft wide by 10 ft long pit underneath radiator for transformer 3N. bluestones are upto 7 ft depth and then soil down to bedrock. Kevin is expecting contaminated soil below bluestone and this contaminated soil is along west sidewall of tunnel. asked Kevin to remove contaminated material upto feasible limit and then to collect endpoint samples. informed Kevin that the department may require additional investigation based on results of endpoint samples.

12/16/09–Hiralkumar Patel.

9:16 AM:– received email from Kevin with pics and updates. Kevin mentioned that there are multiple bluestone "pits" between the concrete beams that support the transformer radiator. the beams are about 7 feet deep, and excavation has extended just past the bottom of them and encountered the water table. the primary material in the excavation at this point is still bluestone. to

extend the excavation down into soil, they will need to undermine the concrete beams and so they have contracted BGA Engineering to develop an excavation plan to progress further. Kevin has spoken to DEC Selvin Southwell concerning dewatering the excavation for further work. because the remaining material to be excavated is largely below the water table, a significant amount of dewatering will need to be done in conjunction with the dig. Kevin is thinking of setting up an oil/water separator and carbon filter system to treat the water removed from the excavation and discharge that water to their circulating water discharge, SPDES Outfall 001. Kevin is waiting for response from DEC Southwell.

01/22/10–Hiralkumar Patel.

3:30 PM:– spoke with Kevin. he is waiting for dewatering plan from his engineer and will call back with updates next week. they are planning to treat water on–site and put water back into site. he is discussing this option with DEC Southwell.

01/28/10–Hiralkumar Patel. received email from Kevin (at 4:09 PM on 01/27/10) with evaluation report from BGA engineering. they hired BGA Engineering LLC, to evaluate the excavation under the 3 North Transformer. BGA engineering indicated that the safest option for both personnel and equipment is to limit the excavation to 9.0 ft below grade surface and install a pump–and–treat system to remediate oil from the soil. Trans Canada is working to establish a treatment system that will allow them to discharge the water that is removed from the excavation. will place a pump in the low point of the excavation for dewaterin. will install a monitoring well in each of the spaces between the concrete beams supporting the transformer radiator, where possible. there are two such spaces where monitoring wells are not possible – one is blocked by an east–west concrete cable duct, and the other by the support structure for the concrete beams. once monitoring wells are in place, will install a pumping system to remove groundwater from the wells for treatment and discharge. this pumping–and–treatment system will include two sampling ports – one prior to treatment, to monitor the reduction in contamination levels; the second will be post–treatment to verify that the effluent meets the standards for discharge to surface waters.

02/09/10–Hiralkumar Patel.

3:03 PM:– left message for Kevin and asked him to submit formal RAP. also informed him that case may be transferred to remediation group.

3:09 PM:– discussed case with DEC Austin for possible transfer. Austin asked to find out level of PCB contents in oil and complete delineation of soil contamination before case transfer.

3:23 PM:– sent email to Kevin requiring to submit PCB data and report on soil delineation by end of 02/19/10.

02/11/10–Hiralkumar Patel. received message from Kevin (at 2:52 PM on 02/10/10).

3:42 PM:– spoke with Kevin. he mentioned that they collected surface dirt sample under transformer and found 1.5 ppm PCBs in it. and this transformer 3N is currently containing oil with 5 ppm PCB. but it contained more PCB oils in past and deeper soil might have more PCBs. Kevin mentioned that to sample soil, they have to dig two more feet of bluestones (to depth of 9 ft bg) and pump out large amount of water (as water is at 7 ft bg). some sheen observed on water in excavation, but no sheen observed at outfall of tunnel into river since Nov. 2009. Kevin mentioned that they can install borings outside of tranformer bed for soil delineation. asked Kevin to submit site map showing transformer bed, dimension of bluestone area and distance between transformer 3N and shoreline.

02/23/10–Hiralkumar Patel.

3:36 PM:– received maps from Kevin. as per scaled site map, transformer 3N is about 190 ft away from river. Kevin submitted map showing areas where borings are possible to delineate contamination horizontally.

03/01/10–Hiralkumar Patel.

2:56 PM:– left message for Kevin.

03/29/10–Hiralkumar Patel.

3:36 PM:– left message for Kevin inquiring about soil delineation work.

03/30/10–Hiralkumar Patel.

3:15 PM:– received call from Kevin. due to another larger spill on the facility (spill #: 0912294), Kevin was not able to work on this case, but now they are looking for bids for soil delineation work under this spill. they are planning to install soil borings in last week of Apr. 2010.

04/29/10–Hiralkumar Patel.

3:33 PM:– received email from Kevin. they hired Tetra Tech to perform the delineation work outside the 3N Transformer bay. tomorrow, they will do utility clearance and vacuum excavation in some of the locations. geoprobe will be mobilized to site to start soil sampling on Monday 5/3.

06/23/10–Hiralkumar Patel.

4:43 PM:– sent email to Kevin to submit updates by end of 06/25/10.

06/25/10–Hiralkumar Patel. received email from Kevin (at 9:20 AM on 06/24/10) with updates. they conducted an initial investigation with Geoprobe borings in eight (8) locations. most of the borings exhibited minimal traces of product in the soil except two of the borings (TWB–7 and TWB–8) contained free product layers several inches thick. these two borings are close to the discharge tunnel. will do further delineation. Kevin mentioned that this week he received the proposal from the contractor on the supplementary scope of work. he will issue approval by next week, and expect to commence work within two weeks following that. at the completion of this work, there will be at least nine (9) monitoring wells installed:

- six (6) 2" diameter monitoring wells (RV–101, RV–103, RV–105, RV–106, RV–108 and RV–109) and
- three (3) 4" diameter recovery/monitoring wells (RV–102, RV–104 and RV–107)

Kevin proposed to submit final investigation report in week of August 30. once they have the 4" recovery wells installed at RV–102, RV–104 and RV–107, will attempt product removal using Vacuum Enhanced Fluid Recovery (VEFR). based on product volumes and recharge, they will evaluate other recovery methods.

10:50 AM:– left message for Kevin to submit report on recent delineation work.

discussed with DEC Austin, who asked to start VEFring immediately as an interim measure.

06/25/10–Hiralkumar Patel.

2:14 PM:– received email from Kevin with boring logs and analyticals. eight borings were installed to depth of 17 ft bg. found free product in TW–7 and TW–8. boring logs shows fill material and sand. no indication of clay layer which could be cause of 4 ft of product in TW–8.

06/28/10–Hiralkumar Patel.

12:33 PM:– spoke with Kevin regarding product in wells. Kevin mentioned that there are no wells at the site yet and they measured product in boring only. will install wells at all previous boring locations and some additional wells for delineation purpose. Kevin mentioned that he will submit preliminary data by end of July, 2010.

07/27/10–Hiralkumar Patel.

9:47 AM:– received email from Kevin. last week they completed borings at three locations south of the area sampled in May. as per Kevin, none of the three locations showed evidence of liquid phase product contamination. based on this finding, they believe that it is a stable pocket against the west wall of the discharge tunnel structure and it does not appear to be mobile. Kevin mentioned that tomorrow and thursday (07/28/10 and 07/29/10) they will complete the installation of three 4" recovery/monitoring wells and six 2" monitoring wells. the 4" wells will be installed first, and once they're in place, will use a vacuum truck to recover as much product out of those wells as possible.

09/09/10–Hiralkumar Patel.

10:36 AM:– spoke with Kevin. he mentioned that contractor is working on report and will submit report by end of 09/17/10.

09/23/10–Hiralkumar Patel.

12:33 PM:– received email from Kevin with report. abstract:

- generating station at the site consists of two main structures – the building housing Generating Units 10, 20 and 30 and the Combined Cycle Unit building (Unit 40)
- transformer 3N is located on the west side of the Generating station building, adjacent to Unit 30
- total of 11 soil borings (TWB–1 through TWB–11) were advanced to refusal (top of bedrock), which varied from 14 to 20 ft bg
- borings were located between the transformer 3N location and the East river, and extended to the north and south
- general soil profile for the generating station consists of soil fill forming the upper–most stratum, which is underlain by a fine to medium, brown to gray sand with various amounts of silt and gravel, to the top of bedrock
- total of 30 soil samples, including duplicates, were collected from 11 borings
- all samples from TWB–1 through TWB–8 were analyzed for TPH, and those samples with the highest TPH concentrations from each boring were analyzed for BNA and GC fingerprinting
- samples from TWB–9 through TWB–11 were analyzed for DRO and GRO, and those with the highest total DRO plus GRO from each boring were analyzed for BNA
- wells were installed at boring locations TWB–1 through TWB–8, with 10 ft of screen
- tidal survey for conducted for 24 hours
- with the exception of one foot tidal variation observed in TWB–1, there was no discernable tidal influence on groundwater
- depth to groundwater in the vicinity of transformer 3N is approx. 6 to 12 ft bg
- wells were installed as either 4 inch recovery wells or 2 inch monitorin wells
- free product found in TWB–7 (0.21 ft) and TWB–8 (4.19 ft)
- groundwater samples collected from wells were no product found
- product was VEFRRerred from wells
- fingerprint analysis confirmed that product found in wells was similar to product collected from transformer 3N

report missing appendix B.

1:36 PM:– sent email to Kevin and asked him to submit missing appendix B.

received email from Kevin. as appendix B is large in size, he will ask contractor to submit entire report in CD.

after dicussing with DEC Austin, case transferred to DEC Vadim due to free product on water.

10/7/10 – re-assigned from Brevdo to Joe O'Connell (JOC)

04/13/11 – J.kann – lead changed to J.Kann.

**DEC Investigator Remarks:**

Ken Yager called in this spill to George Breen at the Region 2 office.

Jane,

We have a similar situation with a black ooze on the east wall of

the A-house (below grade). Once again it doesn't amount to any appreciable quantity but we will take a sample and perform a petroleum identification analysis prior to beginning an investigation.

Ken

Less than one gallon of material released onto concrete in the GT enclosure. Unknown cause. Clean up is completed.

#### DEC Investigator Remarks:

During MOSF inspection on 1/31/08 Kevin Fennessey and I were walking back to his office from Unit 40, when I spotted stained concrete and soil beneath the south side of the GT–1 unit on the road between the plant entrance and Kevin's office. I asked Kevin to call it in. It has the appearance of an on–going drip of long duration, similar to the appearance of a garage floor.

06/22/10 – changed Lead DEC to JMOCONNE (JOC)

5/9/12 : J.Kann – visited site on 3/22. Photographed area of GT–1. Discussed site at closure meeting. Panel rejected closure until surface soils were collected. Discussed further with Joe (he was not at closure meeting). Surface appears to be asphalt. Realize now that southern portion of GT–1 was not observed, the north side was photographed. Will need to revisit site.

#6 FUEL OIL		PETROLEUM	0	GALLONS	0	GALLONS	SOIL

**Caller Remarks:**

THEY HAVE NO PRODUCT LOSE AT THIS TIME; DEC REP. WAS ON SCENE 11/05/07 AND SAID JUST TO PUT IT ON RECORD UNTIL SOURCE AND CAUSE ARE FOUND;

**DEC Investigator Remarks:**

11/5/07: During site visit at Steah House with KeySpan (Ken Yager), there is evidence of oil seeping through east wall of steam house in area where piping comes in. Will contact KeySpan (Pat Van Rossem) regarding investigation of source. There are fuel pipes in vicinity that feed the steam house – may be residual from old leak. See eDocs for photo. (JHO)

11/27/07: phone call from Ken Yager and Kevin Fennessey – no change in status. Sent e–mail to Pat Van Rossem: "Back on November 5, I visited the site with Ken Yager and saw evidence of oil seeping through the eastern wall of the steam house (photo

attached). This is in the general vicinity of the fuel oil pipe that feeds the steam house. Please prepare and submit to me a brief work plan to conduct investigation on the outside of the wall to assess the source and extent of contamination in this area. This work plan should be submitted by the end of the year. If that time frame is not workable, please propose an alternate schedule for submittal."  
(JHO)

12/3/07: reply e-mail from KeySpan (Van Rossem): "I will speak with Ken this week and let you know how we propose to proceed."  
(JHO)

12/11/07: e-mail from KeySpan (Van Rossem): "For the requested investigation work scope, we propose to use an env. contractor to open an approximately 4 foot by 4 foot wide excavation to inspect the soil conditions just outside this area of the Boiler House. The contractor will likely use a guzzler to do the excavation to avoid damaging utilities. Petroleum ID and TPH samples will be collected as necessary. The Plant would like to start this work in January." (JHO)

12/19/07: e-mail to KeySpan (Van Rossem): "I'm going to need something a little more substantial in terms of a work plan (i.e., following guidance of DER-10, section 3.3). I recognize this is a rather small-scale investigation, but you still need to lay out some specifics in a formal work plan (i.e., site plan/sketch showing test pit locations, sampling frequency and methodologies, QAQC for samples, etc.)." (JHO)

1/15/08: E-mail from KeySpan (Van Rossem): "I've asked PS&S to provide a work scope to me per your request. I am aiming to get you something by the end of next week." (JHO)

1/30/08: E-mail from KeySpan (Van Rossem): "PS&S suggested bringing a contractor to the Site first before providing us the letter work plan for review. The contractor visit is today and the work plan should follow shortly." (JHO)

2/6/08: Proposed Investigation Work Plan prepared by PS&S submitted by KeySpan (Van Rossem). (JHO)

2/11/08: e-mailed comments on work plan to KeySpan (Van Rossem):

1. How was depth of 6 feet for test pits determined? What is depth of building foundation? Test pits should extend to water table, if deeper than 6 feet.

2. Test pits should be logged and photo documented as per DER-10 section 3.5.2(g).

3. Section 2.4 Waste Management – No definition is supplied for the term "significantly impacted". No soil displaying visual or olfactory evidence of contamination, or PID readings above background, may be used to backfill the test pits.

4. I would suggest you consider an IRM to be conducted concurrently with the investigation, assuming the test pits reveal a limited area of contamination. (JHO)

2/25/08: Revised redline SIWP addressing comments e-mailed from KeySpan (Van Rossem). See eDocs.(JHO)

2/27/08: Sent e-mail to Van Rossem: "The revisions are generally acceptable, however the test pit logging section should specify that PS&S will follow the requirements in DER-10 (my apologies – the correct citation should be DER-10 section 3.5.1(a)(2)). Soil descriptions should be done using the NYSDOT soil classification system, not the USCS as specified in the proposed work plan."

(JHO)

3/4/08: Final revised SIWP submitted. See eDocs. (JHO)

3/6/08: Conditional SIWP approval letter sent to KeySpan. Conditions relate to sampling frequency. See eDocs. (JHO)

6/21/10 – changed Lead DEC to JMOCONNIE (JOC)

4/13/11 – J.Kann – lead changed to J.kann

4 gals unk material – seeping through walls and floors of tunnel

jane o'connell from dec was on scene

ref to con ed #141322

material is a black oily substance

---

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

E2MIS #141331

02-FEB-2002

At 16: 10 L. Jones #13917 of EH&S reports approximately 4 gallons of a black oily substance has oozed through the tunnel wall of the Ravenswood tunnel and is on the concrete floor. The spill did not enter any sewers, waterways or sub-surface structures. There was no fire or smoke. The spill was discovered while remediating another spill.# 141322. The spill is a HISTORICAL spill and there is no equipment causing this substance spill. Cleanup has not begun as yet. L. Jones reports she called CIG Schlagel, and ERT Capune at 16: 25.

O'Connell notes: The above description is not accurate. The spill was not "discovered" today. It has been on-going for many years, according to Vic Basso, Gas Ops EH&S. The only reason it was reported was because DEC observed the oil seeping in and asked why it had not been reported previously. The tunnel drains to a sump, which is pumped up to the oily-water separator. The sump was found to contain an old absorbent boom, which had become so saturated with oil and water that it had sunk and was no longer serving any function. In addition, Con Ed personnel had previously placed absorbent pads on the tunnel floor near the seepage points, but many were saturated with product. Con Ed was instructed to have all of the oily pads removed and replaced, and to have the boom removed and replaced, as well. Samples were requested to be taken from various seepage points and run for oil ID GC/MS. There were at least 10 locations where oil was observed. (JHO)

06/03/02

Report updated to reflect Lab report showing Oil ID (LSN02-01520) of black material seeping into the tunnel was emailed to DEC on 4/18/02. Chromatograms were also faxed on 4/18/02.

Lab Report is as follows:

Lab Sequence Number: 02-01520-001

Date Approved: 2/27/2002

Aroclor 1262 < 134 ug/Kg EPA 608/8082

Aroclor 1268 < 134 ug/Kg EPA 608/8082

Aroclor 1242 < 268 ug/Kg EPA 608/8082

Aroclor 1232 < 134 mg/Kg EPA 608/8082

Aroclor 1221 < 134 mg/Kg EPA 608/8082

Aroclor 1016 < 134 mg/Kg EPA 608/8082

Aroclor 1248 < 134 mg/Kg EPA 608/8082

Aroclor 1254 < 134 mg/Kg EPA 608/8082

Aroclor 1260 < 134 mg/Kg EPA 608/8082

OIL ID ANALYSIS INDICATES THE PRESENCE OF A SUBSTANCE SIMILAR TO DEGRADED CREOSOTE.

4/23/03: visited site with Kerry Foley and Gardiner Cross (DEC), Pat Van Rossem (KeySpan), Lima Jones (Con Ed) and KeySpan's consultant (Foster Wheeler). G. Cross has expertise in investigation and remediation of MGP sites. Recent findings in deep wells on KeySpan's property indicate that there is mobile tar in the fractured bedrock at a depth of approx. 67 feet below grade (monitoring well MW-12 cluster). The tunnel is over 100 feet deep. After inspecting the tunnel, G. Cross concluded that the material observed seeping into the tunnel is MGP tar. KeySpan was told that they will need to install additional wells to the depth of the tunnel in order to assess the extent of the contamination. (JHO)

11/13/03: spill submitted for closure by Con Ed. Request rejected, with following note: "Remains open pending investigation." (JHO)

4/7/05: following request by DOH, Con Edison completed air sampling in the tunnel to assess worker exposure. The following e-mail from Janet Fox, Con Ed, was sent to DEC and DOH: "Attached is the report on the air monitoring that was conducted at the Ravenswood Tunnel in the summer of 2004. Clayton Environmental did the sampling. Analysis for PNAs was done by the Clayton Lab in Novi, Michigan. The summa canisters were analyzed by Columbia Analytical Services in California. Analytical results for both VOCs and PNAs were unremarkable. A number of VOCs were detected in each of the samples but the levels of all compounds identified were in the low ppb or micrograms per cubic meter range. The samples also contained low levels of some of the MGP marker compounds. The complete results and discussion are attached. Jane, please let me know if this will suffice to close out the open spill item for Ravenswood in the Con Edison Spill Report." See eDocs for lab results. (JHO)

4/25/05: E-mail response to Janey Fox: "This spill cannot be closed since the source is still under investigation, though I suspect that the responsibility for the spill will be transferred to KeySpan at some point. Also, I'm still waiting to hear from DOH with their opinion on the air sampling results. What is the status of the utility clearance effort by Con Ed for the KeySpan drilling effort?" (JHO)

1/25/07: Con Ed sends another request for closure, as follows: "This spill should be transferred to KeySpan since they bought the Ravenswood property and are now responsible for any contamination in their ground. The source of this contamination is from the area outside the tunnel shaft and it is oozing into our tunnel." Sent response to Richie Lund: "Responsibility for the investigation and remediation of this spill has been effectively transferred to KeySpan. However, because the spill was reported by Con Ed, it still shows up on the list of spills for you when I run the query. I can state that Con Ed has no requirement at this time to remedy the spill, other than to maintain a clean and safe work environment in the tunnel for any utility workers that enter, and to prevent any of the material in question from entering the sump area." (JHO)

6/21/10 – changed Lead DEC to JMOCONNIE (JOC)

4/14/11 – J.kann – DEC lead changed to J.Kann.

200 GAL DIELECTRIC FLUID UNACCOUNTED FOR AT FEEDER #31282. CON ED IS INVESTIGATING.

Leak declared at 1715, rate of leak 1 gallon per minute.

5/22/05: Leak pinpointed @ intersection, clamped @ 0615. 158710

**DEC Investigator Remarks:**

158710.000

21-MAY-2005 1720 HRS. NICHOLAS CAPOLARELLO RECEIVED NOTIFICATION FROM TONY ROTOLA, @ VERNON SUB STATION. MR ROTOLA REPORTED WHILE TAKING HIS STATION READINGS, A DISCREPANCY OF 200 GALS OF DIELECTRIC FLUID WAS INDICATED ON FEEDER 31282 "M"-LEG. THE ENERGY CONTROL CENTER OPERATIONS VERIFIED THE INDICATION AND A LEAK HAS BEEN DECLARED, OF APPX 200 GALS OF DIELECTRIC FLUID. NO SEWERS, WATERWAYS, OR PRIVATE PROPERTY AFFECTED. THE SOURCE, AND LOCATION OF THE SPILL IS UNKNOWN AT THIS TIME. MR. COPOLARELLO REPORTS THE LEAK DETECTION COMMITTEE IS IN CONFERENCE AT THIS TIME TO DETERMINE A COURSE OF ACTION.

UPDATE 21-MAY-2005 1739 HRS. AS PER S. MARTIS, ERT, LEAK HAS NOT BEEN DECLARED, COMMITTEE IS STILL INVESTIGATING.

Update: Sunday, May 22, 2005 1400 hrs. Per Larry Crilley, Chief Construction Inspector, Transmission Operations, leak was located using PFT tracer by Con Edison Chem Lab. High concentration was detected in vicinity of 21st Street & 40th Avenue at about 0200 hrs on Sunday, May 22nd. Emergency response contractors Manetta and Allstate responded to location and began excavating. Con Edison Corporate Transportation also responded to location. Leak was located on 21st Street about 10–15 North of 40th Avenue. Transmission Operations personnel clamped leak at about 0615 hrs. Allstate continuing to remove contaminated soil. Changed E2mis responsible operation from "Substation Operations" to "Transmission Operations" LParetsky, Transmission Operations.

Update 5/23/05

Sam Arakhan inspected the site of the spill at 11:15 AM on 5/23 and observed that a barrel had been welded over the leak. Con Edison contractors will be excavating all visually contaminated soil as per Leon Paretsky. Chem Lab personnel were on-site to sample fluid contained in an abandoned feeder line adjacent to the leaking feeder. Chem lab personnel will also be taking post-ex samples. (SKA)

Update: Monday, May 23, 2005 1830 hrs

Preliminary estimate of amount of dielectric fluid released is about 300 gal. Removal of contaminated soil continues by Allstate, with support of excavation contractor Manetta. During excavation southward discovered hole in a retired feeder pipe that was below the leaking pipe. Upon review of drawings there appears to be two feeder pipes that were retired and capped that ran for about 1 block along 21st Street from 40th Avenue to 41st Avenue. An unknown oil was in the feeder pipe. The Con Edison Chem Lab obtained a sample of the unknown oil that was in the pipe. The oil will be analyzed for PCBs and Oil ID. It will be compared with the dielectric fluid that was released from the feeder leak – it is possible that the unknown oil that is in the pipe may have accumulated during the leak, or it could be residual fluid in the pipe when the cable and dielectric fluid was removed from the retired pipe section. Access will be made into the second pipe to determine if there is any fluid in the pipe. If there is fluid, a sample will be taken prior to removal of the fluid from the pipe. Any fluid will be removed from both pipes. In addition, because of prior releases in that area, samples of discolored soil was taken from the excavation and will be analyzed for oil ID – to determine if it is contamination from the current leak, or from a prior incident. Chain of Custody for the samples is EE00035. Mr. Samsudeen Arakhan, NYSDEC, Region 2, visited the site at about 1130 hrs, to observe the activities. He was briefed on Con Edison's cleanup plan – to expand the excavation to remove visibly contaminated soil, and then take confirmation cleanup samples. Photos of the excavation were taken and copies will be provided to the Mr. Arakhan, in addition to an updated copy of this e2mis report.

Update:

Friday, May 27, 2005 – 1610 hrs

Additional contaminated soil was removed from excavation. Size of excavation was about 18 feet long, by 10 feet wide, and about 7.5 feet in depth. Oil/water collecting in bottom of manhole was being removed. Steve Callinan reported that at 1500 hrs, during the removal of the coal tar wrap, a small leak/weep developed on the other feeder pipe in the excavation (31282 "L" leg). Additional coal tar wrap was removed to place a clamp on the feeder pipe. Since poly was on the floor of the excavation during the coal tar wrap removal, none of the leaking dielectric fluid was released onto the soil, but all the dielectric fluid was captured on the poly. Steve Callinan reports that an estimated 1/2 gal was released. The dielectric fluid was cleaned up using absorbent material and placed into a drum.

The excavation was extended to approx. 10' X 18' with a depth of approx 7.5'. Post ex samples were taken by Jacques Whitford on 5/26/05 and we are awaiting the results. Additionally, JW also installed 2 monitoring wells at this location due to upwelling of

groundwater and dielectric fluid into the excavation. The excavation has been backfilled and restored as the size of the excavation prohibited from plating safely. This was discussed with Sam Arakhan of the NYDEC. The wells will be prepared for gauging within the next 10 days. We will gauge once a week for a month to establish a gauging frequency going forward.

**FOUND CONTAMINATED SOIL AT ABOVE ADDRESS DURING BORINGS:**

DEC Investigator Remarks:

I called City Parks Dept and left a messege for Ellen Macnow requesting call back regarding the contaminated soil found at the water front.

06/03/08 I spoke with Hose Lopez of NYC Park and told him that additional investigation to delineate the subsurface contamination is needed, specifically horizontal extent of soil & ground water contamination. The previous investigation revealed some voc/svoc in ground water slightly above the TAGM.(sr)

04/24/09 Performed a site inspection this morning. Spoke with Parks Dept Project Manager for Environmental Issues, Mr. Rowland. A CSL requiring remedial investigation & remediation was sent to

NYC Dept. of Parks & Recreation  
Olmsted Center  
117-02 Roosevelt Street  
Flushing, NY 11368  
Attn: Marty Rowland, Senior Project Manager for Remediation  
(sr)

05/15/09 Rec'd response letter from Chief Engineer, Parks Dept. that indicates that Parks Dept intends to perform subsurface investigation and close tank. Also with DOT, Parks is moving towards a re-alignment of the seawall which will require removals of all subject area soils. The new seawall project is in design and anticipated to begin construction in 2011. (sr)

**ACTIVE HAZARDOUS SPILLS – MISC. SPILL CAUSES – EQUIPMENT FAILURE, HUMAN ERROR, TANK OVERFILL, DELIBERATE SPILL, TRAFFIC ACCIDENT, HOUSEKEEPING, ABANDONED DRUM, AND VANDALISM – IDENTIFIED WITHIN 1/2 MILE SEARCH RADIUS.**  
 All spills mapped and profiled within 1/8 mile. Between 1/8 mile and 1/2 mile search radius, spills reported to be greater than 100 units and spills reported in the NYSDEC Fall 1998 MTBE Survey are mapped and profiled. Spills reported to be less than 100 units are listed in a table at the end of this section.

Please Note: \* – Compass directions can vary substantially for sites located very close to the subject property address.

LEAK FROM PIPE OF STORAGE TANK INTO A MOAT – CLEAN UP CREW ENROUTE – PIPE TO BE REPAIRED.

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

6/13/95, 2:00 PM – arrived at site. Met Joe Busacca, Calvin Hua, Dom Digiorgio, Bernar Hen (Con Ed). Busacca says pH of the leaking material (called Drewplex 1621) is 13.2. Leak is coming from an elbow of pipe exiting tank bottom. Tank volume is 3000 gallons. Moat is roughly 9' x 18' x 3.5' (4240 gallons). When first noticed leak, there was about 1/4" on the floor – now there is 3". Busacca says leak rate is faster now.

Representative from Advanced Environmental Technologies Corp. (AETC) out of NJ was here at ~11:30 AM. Truck to pump out material will be here in about 2 hours. Tank gauge may be broken.

6/17/10 – changed DEC lead from Krimgold to JMOCONNIE (JOC)

4/14/11 – J.kann – DEC lead changed to J.Kann.

DURING TRANSFER VIA UNDERGROUND OIL PIPELINE BETWEEN RAINEY TANKS TO #30 BOILER OIL APPEARED IN PARKING LOT. OIL WAS CONTAINED BY CON EDISON PERSONNEL. MEG HIRED AS CLEANUP CONTRACTOR. SIGONA RESPOND

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

12/7/94, 11:30 PM – Met with manager of plant Frank Miscone and Jerry Waller, Shift Supervisor. Oil observed around parking lot adjacent to Vernon Blvd. down to boiler plant approx. 50 – 70 feet from water. Notified USCG that oil appeared to threaten navigable water. USCG said that Con Ed did not notify their office and that they would send a team to respond and a patrol boat.

According to F. Miscone, at 9:15 PM they were pumping oil from Rainey tanks to Gen Station Unit #30. Pressure never developed after startup procedure. They began investigating lack of pressure in the system. At 9:50 PM an employee coming to work noticed oil in the parking lot. The line operates at 750 gpm maximum pump rate.

They did not use this pipeline since last February when oil was shut down for inspection/ hydro test of tanks. At that time lines were drained, purged with No. 2 F.O. and blew the line out with air. Tanks were refilled on Nov. 30.

According to operating room, the tank measures a 39,558 gallon loss due to the leak on the pipeline.

Plant will remain operating on gas until cleanup is complete. (AJS)

12/8/94, 0900: Spill covering large portion of parking lot east and north of GS. Leak is from supply or return line supplying the #30 boiler. MEG (Gaylord Hanson + 20 workers, with 10 more en route) starting cleanup. DEP (Wai Wong) and USCG also on scene.

Small amount of oil (~20 gallons) entered sanitary sewer east of GS by 38th St. gate. None reported at Bowery Bay WPCP. Warned MEG of rain forecast for Saturday night. G. Hanson said he will be excavating interceptor trenches on the west side of the property to prevent the water from entering the river. (CAE)

12/12/94 (Monday) – On Saturday there was very heavy rain which mobilized a lot of the oil that was trapped under heavy equipment and debris, and under the sand that had been spread. The rain lasted 2 to 3 hours and caused MEG to scramble to keep oil out of the river. They dug 3 successive interceptor trenches and pumped the oil/water mixture into the boiler water pond. This pond already had a small amount of oil in it but afterwards there was much more. MEG reported that no oil entered the river. (CAE)

1/12/95 – Have been monitoring the cleanup. Authorized Con Ed to spread bluestone over the areas west of the treatment pond and south of the parking lot/east of the Gen. Station (this was done a couple of weeks ago after inspection of the cleanup in these areas.

Con Ed/MEG made a series of 2 foot deep borings to determine the extent of the migration of oil immediately under the asphalt parking lot. They found no oil in any of these "skin pops". See attached boring network diagram. [NOTE – see eDocs for site maps, etc. (JHO)]

Today I met with Gaylord Hanson. About 19,000 gallons of free product have been removed (not including oil in solid debris). Area looks pretty good. There are 2 drainage drywells that have oil in them (see map). MEG will vac them out but there is probably extensive contamination here that will leach back in. The pipeline repair excavation has been filled back in but more samples taken from the walls before backfill revealed high TPH #s, according to Gaylord, so Con Ed will have to address this.

MEG is putting together a report on the cleanup with recommendations for further investigation/remediation. This is due in a couple of weeks. (CAE)

10/10/97: TRANSFERRED FROM SIGONA TO O'CONNELL.

6/18/98: property and responsibility for remediation transferred to KeySpan Energy. (JHO)

Reviewed "Limited Subsurface Investigation" report submitted by MEG in early 1995. [SEE COPY IN eDOCS] MEG installed a total of 34 "borings" (no deeper than 2 feet below grade) to visually determine if oil had migrated under the asphalt from the initial spill area. No oil was observed in any of the boring locations. (JHO)

8/27/98: Oil sheen/slick noted on puddles in parking lot (spill # 9806585 – closed and cross-referenced to this spill). (JHO)

NOTES FROM DEC # 9901825 (closed and cross-referenced to this spill):

5/21/99 spoke with Dominick DiGiorgio, Con Ed Env. Manager. He believes samples were only collected for TPH, PCB and TCLP hazardous waste determination. Excavation is plated, but not backfilled. Called ERT and requested copy of e2mis report. (JHO)

5/25/99 on site with Georgia Fairweather, Construction manager. Excavation is on generating station property near 38th Avenue gate for installation of water metering equipment. They encountered some contaminated soil. Soil was drummed, and sampled for disposal. No sample was taken for oil ID. Excavation is plated over until Tues 6/1, when excavation will be completed. They will arrange for Chem Lab to be on site to collect sample for oil ID. (JHO)

6/1/99, 1:45 pm – on site. Met with G. Fairweather, who said that Chem Lab tech had been on site earlier, but didn't collect sample because they didn't know what parameters they were analyzing for. Have to call Pat Keelan at Chem Lab to confirm oil ID analysis. (JHO)

7/21/99: e-mail to ERTS requesting lab results. (JHO)

7/28/99 – results received for TCLP waste characterization only. (JHO)

9/1/99 – second e-mail request to ERTs:

"Following requests were originally made on 7/21/99:

1. Con Ed #124-930, DEC #9901825, 5/17/99 – Ravenswood Generating Station. During excavation for installation of new metering for the divestiture contaminated soil was discovered along the east wall of the complex near the 38th Ave. entrance gate. The Department requested samples for oil ID. Have samples been collected for analysis? Specify the sampled medium and the analysis being performed. If analyses are complete, please forward results and an updated e2MIS report." (JHO)

9/2/99 – response from Pat Keelan and ERTs that "oil ID analysis was not requested and arrangements were never made to have the samples taken for ID. If the material is still there we can take the samples anytime." (JHO)

11/7/99 – following additional requests for clarification from Con Ed, received the following e-mail from Dave Perez (Con Ed ERT): "The oil ID analysis was never requested by Ravenswood station and therefore it was never performed by the Chem Lab. This was indicated in Pat Keelan's [e-mail]....dated September 2, 1999. Your first request for information, received on July 21, 1999 arrived subsequent to the sale of the station. The closing date of the sale was July 18, 1999. Even if the material is still present on the site, since this is no longer Con Edison property, we cannot get a sample. I apologize for the initial confusion, for the delayed response and any inconvenience this may have caused..." (JHO)

4/14/11 – J.kann – DEC lead changed to J.Kann.

---

**Caller Remarks:**

Values not registering the same at each end of the substation points. Checking for leaks. Cleanup pending investigation.

@ 1421 – CON ED CALLED AND RAISED TOTAL TO 444 GALLON

---

**DEC Investigator Remarks:**

03/26/11–Con–ED Dennis Michaelides called 03/25/11 at 2:30pm to update this spill. He said feeder is leaking. This is continuation of yesterday spill. Indication show amount of 444 gallons lost. Still looking for leak.

03/28/11 Spoke with ERT. Leak has been detected at 21st street/38th Avenue. Leak has been stopped by clamp. Contaminated soil around the leak is being removed. As of now, estimated 500 gallon di-electric fluid lost. (sr)

03/29/11–Hiralkumar Patel.

10:30 AM:– visited site with DEC Austin. leak found in area along the east side of the 21st street, south of 38th Ave. ConEd crew was repairing feeder line. as per on-site supervisor, they had collected soil sample from sidewalks and bottom of current excavation, but there is still more contamination which needs further excavation. as per supervisor, once they finish their line repair today, they will cover the excavation with metal plate and will apply for DOT permit for further excavation.

04/18/11–Hiralkumar Patel.

1:40 PM:– spoke with Tony at ERT inquiring updates. he will call back.

2:26 PM:– received call from Tony from ERT. they are still waiting for permit. Tony asked to contact Mr. Pillig, project manager at ConEd.

2:32 PM:– left message for Mr. Pillig.

Michael Pillig  
Transmission Operations  
3103 20th Avenue  
Queens, NY 11105  
Ph. (718) 204-4256 (O)  
(347) 386-5506 (C)  
email: pilligm@coned.com

08/26/11–Hiralkumar Patel.

3:10 PM:– received email from Robert Duffy from ConEd. he mentioned that total of 501 gal oil spilled, with a leak rate of about 1.5 gal/hr, from feeder line. permanent repair was made and contaminated soil was excavated from around the leak point. original excavation samples indicated readings of below 10,000 on all sidewalk samples and a high result of 40900 on the floor sample below the feeder where the leak occurred. excavation was continued in bottom and as excavated deeper the leak samples indicated

dropping levels of oil concentration in the soil down to 29,400. at 13.5 feet deep the water table was reached. an unusual amount of oil was found on the water table and when tested it was indicated to be partially a Sun 6 oil which was used decades ago. upon further investigation it was found that this location was previous recognized as an appendix B remediation site from large historical leaks. Mr. Duffy believes that the soil remediation is complete on this location given that all sidewall samples are acceptable and they like to remediate this location under the remediation to be done for the existing appendix B work.

Robert Duffy  
Transmission Operations EH&S Project Specialist  
Ph. (718) 204 – 4478 (O)  
(646) 584 – 5918 (C)  
email: DUFFYR@coned.com

09/08/11–Hiralkumar Patel. discussed with DEC Austin. he is not sure whether case will be handled in region 2 remediation or in Albany. he will discuss with DEC Paul.

1:54 PM:– spoke with Mr. Duffy and informed him that case will be transferred to remediation group either in region 2 or in Albany. he inquired if any further soil excavation is needed. he mentioned that all soil under the leak area (within the piling box) was dug down to 13.5 ft where groundwater found. informed him that a new project manager in remediation will review endpoint soil sample results and decide about any further soil excavation.

11/21/11–Hiralkumar Patel. discussed project during meeting with DEC Austin, Mr. Pillig, Mr. Duffy and Mr. Madsen. based on findings of clean soil above water table and findings of old Sun 6 oil on groundwater, Mr. Pillig mentioned that case will be transferred to remediation group in ConEd and he requested case transfer to remediation ground in DEC also. based on available information, DEC Austin asked to transfer case to DEC Joe O'Connell.

Matthew Madsen  
Remediation – EH&S  
Ph. (718) 267–3866 (O)  
(917) 642–9171 (C)  
Fax (718) 932–2687  
email: madsenm@coned.com

11/30/11–Hiralkumar Patel. after discussing with DEC Joe, case transferred to him.

12/1/11 spoke with Matt Madsen (Con Ed); he said they should be meeting internally shortly to get all information from TO about the spill response; if it is contamination from a prior spill, it is likely one that is part of an Appendix B project handled by Vito Mariani at Con Ed. He will confer with Mr. Mariani to review how it fits in with his project. Mr. Madsen advised that, as he understands, the excavation has been filled and the road has been re–surfaced. (JOC)

KEROSENE	PETROLEUM	250.00	GALLONS	0.00	GALLONS	

**Caller Remarks:**

250 GALLONS TO THE SECONDARY CONTAINMENT MOAT ON TOP OF WATER AROUND THE TANK. DUE TO A LEAKING SUPPLY LINE CLEAN UP IS PENDING.

**DEC Investigator Remarks:**

Originally thought to be a "contained leak" of 250 gal into an outdoor containment moat mixed with water. Clean Venture was hired to clean out the moat.

2/26/2010 – Sangesland spoke to rep from TransCanada Ravenswood. They now believe there was a massive leak from an underground pipe. Approx 24,000 gallons of kerosene is "unaccounted for" and is assumed to be under the plant. Kerosene has shown up in a manhole in a nearby service road.

03/01/10 Performed site visit this morning. Underground product supply line from two(2)million kerosene AST to Gas Turbine Unit(GT-3) leaked and released unknown quantity of kerosene to subsurface. After inventory reconciliation,the quantity estimated to be approx 24,000 gallon. The underground pipe is about 150-160 ft in length. Excavation on the pipeline where kerosene bubbling up the surface started this morning.Clean venture began recovering the free product from the containment moat of the 2 mil gallon AST. Shore line has been boomed off,as precaution. Existing MWs on the bulkhead is monitored daily. No sign of any product in the monitoring wells is found. Waste Recycling Solutions(WRS) exposing the underground line to identify the leak.(sr)

\*\*\* Ravenswood contact personnel: Kenneth Yager,(718)706-2702/Kevin Fennessey,(718)706-2773 \*\*\*

03/03/10 As of 03/02/10 1,300 gallons of product had been recovered.Oil recovery continued in three locations:Inside the secondary containment for tank KO-1 where water and product leaking into the dike from cracks and an abandoned pipe penetration, in the ConEd manhole on the 36th Avenue service road, in the excavation at the north end of GT 3 where product is seeping out of the soil.Preparations are underway to offload the KO-1 tank.(sr)

03/09/10 As of 03/08/10, approx. 2575 gal of kerosene recovered.On 3/9 more excavation pits along the northern fence will be dug to determine the east-west boundaries of the product plume.In the Con Ed manhole on the 36th Ave service Rd, product was no longer entering through a conduit buried approx 3 ft below the surface.Investigation of the manhole identified a 2" drain hole at the bottom where product was visible. It was inferred that product was on the ground water in this area.A test pit to the water table was excavated at the north boundary of Ravenswood in the vicinity of the Con Ed manhole.Visible product was evident in the test pit.Two more test pits were excavated at the north boundary of Ravenswood-one about 30' west of the ConEd manhole and the other about 50' east of the manhole. Both test pits evidenced product at the water table.  
The transfer of Kerosene from tank KO-1 to the barge commenced on 03/06.(sr)

03/22/10 Email from Ravenswood. "The following is the status of the kerosene spill (NRC #932394, DEC #0912294, DEP #184991838) at the Ravenswood Generating Station as of Monday, March 22, 2010:

\* There has still not been any visible product on the East River to date.

\* On Monday 3/15 we disbanded the internal incident command system. we had set up at Ravenswood. After over two weeks of investigation, we felt confident we had determined the approximate extent of the spread of contamination. There was no longer an immediate risk of the product contaminating the East River. This was no longer an emergency response, and we transitioned into a recovery and remediation project. \* On Tuesday 3/16 and Wednesday 3/17 we conducted seismic refraction testing to map the bedrock contours to the north of the spill location. We expect to have results of that testing back this week, to help us determine the flow path of product away from the leak site.

\* On Thursday 3/18 we commenced drilling monitoring/recovery wells. Three wells were installed through Friday 3/19. A total of seven 4" wells will be installed on site using the sonic drill rig, with some additional 2" wells installed using a Geoprobe rig along the fence line.

\* On Friday 3/19 we received the NYCDOT permit to excavate test holes in the 36th Ave. service road. We will be working with the contractor for the bridge refurbishment project to complete those test holes this week, if possible.

\* The abandoned 12" fuel oil line to the Rainey Tanks was opened on Friday 3/19. It was determined that this was not acting as a conduit for kerosene, as it already contained old No. 6 oil from its abandonment in 1965. Under a separate project, this line will be cleaned, detached from the kerosene unloading line, and properly abandoned in place with grout.

\* As developments are happening more slowly now, I will be sending these updates less frequently probably once or twice a week. I will keep you updated should any important developments arise.""

04/30/10 As per email on 04/29/10, there has still been no evidence of product release to the East River.Four wells have been drilled and installed on the 36th Ave. service road. The last two wells were completed on 4/28.One more test pit will be dug in the 36th Ave. service road to clarify the eastern boundary of the product.TranCanada built three sumps inside the KO-1 containment to facilitate recovering the product that seeps in through the wall. Much of the investigation work for this project is complete, and they are working on developing an investigation report and designing a recovery system for the spilled

product.(sr)

\*\*\*\*\* Status update emails in edocs\*\*\*\*\*

07/29/10 GZA prepared Spill Investigation Summary report. Spill site is located on the northern portion of the Ravenswood property at the junction of Vernon Boulevard and 36th Avenue. Historical releases of kerosene have occurred at the site which resulted in degradation of ground water and the occurrence of non-aqueous phase liquids (NAPL). There were sixteen previous spill cases associated with the site. Existing Monitoring wells located between the Feb 2010 spill location and the East river. Ground water flow in westerly direction. LNAPL has historically been observed in existing monitoring wells. Kerosene appears to have migrated vertically downward until it encountered an old concrete building slab, which was left in place from a former building and was subsequently incorporated into the foundation construction of the GT-3 and GT-2 buildings. Once the kerosene encountered this barrier to vertical migration, it spread laterally. Kerosene was observed entering the north and east walls of the K01 containment dike through cracks and a pipe and subsequently in a ConEd Vault on 36th Avenue (north of the release area). Kerosene appeared to be entering the vault through a drain hole in the bottom of the vault and through the concrete electrical duct bank as it entered the eastern wall of the vault. Kerosene appears to have not migrated any further west than monitoring well GT-104, which has no recorded kerosene. GZA supervised installation of 30 soil borings at the site in a grid like pattern to depths ranging from 2 to 20 ft bgs. Four 6 inch diameter screened recovery sumps were installed, GZA-1, GZA-7, GZA-27, GZA-20. The sumps extended to the water table. GZA supervised the installation of 14 permanent monitoring wells (GT-101 through GT-114). GZA has been periodically gauging the ground water and LNAPL thickness in new and existing monitoring wells. Kerosene has not been observed in wells west of GT-103. Kerosene was observed in monitoring wells GT-103, GT-105, GT-107, GT-108, GT-109 and GT-110 at thickness ranging from 0.02 to 0.79 ft. Thirty six soil samples were taken from the soil borings and test pits for lab analysis. Several petroleum VOCs were detected in soil samples above DEC part 375. VOCs were detected above regulatory limit in ground water samples from GT-101, GT-104. Figure 8 depicts the estimated areal extent of observed kerosene in test pits, borings, wells. Kerosene was observed in soils above the buried concrete slab in the vicinity of the release area. In addition, kerosene was observed within the trench, above the concrete slab, to the north of the GT-3 unit. Kerosene was also observed in a gravel drainage layer along the northern wall of the K01 containment dike, and entering the K01 containment area through cracks and the pipelines. Kerosene was observed in the bedding sand around the abandoned No 6 oil underground pipeline. Under 36th Avenue, kerosene was observed at exploration locations GZA-30/GT-114 and GZA-32/GT-112 to accumulate on the top of bedrock.

The extent of kerosene appears to be bounded: to the west by monitoring wells GT-104, GT-101 and GT-111; to the east by the end of the test pit advanced along the northern side of the GT-3 building and GT-106; and to the north by the presence of the Bridge abutment which extends to rock and below the water table (thus impeding further northward migration of kerosene) as well as monitoring well GT-113. During the investigation of the leak of the kerosene supply line to GT-3, the entire area was excavated to the top of the concrete slab. In addition, several other areas of petroleum contaminated soil have been excavated during the investigation including the test pits excavated for utility clearance and No. 6 fuel oil pipeline investigations. WRS periodically has recovered kerosene that seeps into excavations or accumulates in the installed product recovery sumps, monitoring well GT-103 and the Con Ed vault on south 36th Avenue. WRS estimated that approx. 4,700 gallons of kerosene has been recovered as of May 14, 2010. TransCanada has setup several temporary recovery points along the K01 secondary containment dike. Of the 24,000 gallons kerosene released, approx. 6,000 gallons of product have been recovered. The remaining kerosene is believed to be either perched on bedrock above the water table, in bedding sands around utilities, accumulated on the water table in the vicinity of GT-103, trapped along the northern and western walls of the containment dike, and/or trapped within bedrock fractures.

GZA performed tidal survey to measure the effect of tidal variation on groundwater elevations. (sr)

Five recovery sumps were installed at the site including: GZA-1, GZA-7, GZA-17, GZA-20 and GZA-30. All monitoring wells and the sumps will be gauged periodically for the presence of kerosene. Kerosene continues to accumulate in the Con Ed vault on 36th Ave.

Product will be evacuated from this vault and monitoring well GT-112 using a vacuum truck until it ceases to accumulate. GZA will install one 2-in belt skimmer in the well GT-103 to collect kerosene from the well. The belt skimmer will be in operation until the ground water depression product recovery system can be installed and made operational later this year. GZA proposes installing one QED AP4T top intake total fluids pneumatic recovery pumps. The pump will be installed within well GT-103 later this year. Monitoring wells will be periodically monitored for depth to water and depth to product. Ground water samples will be collected twice yearly. Samples will not be collected if kerosene is present in the well. No visual evidence of petroleum discharge observed to the East river during GZA's bulkhead survey. As per GZA, it is still possible that kerosene plume is increasing in areal extent and could reach the East river at sometime in future.

Case transferred to Remediation Section for future management.(sr)

08/19/10 – re-assigned to Joe O'Connell (JOC)

09/29/10 – on site with Kevin Fennessey (TC) on 9/28 – discussed proposed IRM and additional delineation; most sumps no longer showing product, belt skimmer in operation in well along northern property line (the point where P&T system proposed).

04/13/11– J.Kann –Spill transferred to J.Kann. Met with Greg Pryor on March 30th to discuss the site. An IRM was submitted in March 2011. The IRM includes the installation of a pump and treat system. DEC conceptually approved the IRM at the meeting, however the IRM needs to be signed and sealed by a PE and resubmitted with minor modifications. In an email of March 31, Greg Pryor indicated that the revised IRM will be submitted together with a signed stipulation agreement shortly (sometime in April). It has not yet been received.

04/26/11– J.Kann – Revised IRM received on April 14, 2011.

05/09/11– J.Kann – Signed Stipulation agreement and RIWP received on May 9. Transmittal memo prepared and stipulation forwarded to Lou Oliva.

5/10/11 – J.Kann – Stipulation executed by Susanne Mattei on 5/9/11.

5/12/11 – J.Kann – Executed stipulation forwarded to Greg Pryor of TransCanada.

5/23/11 – J.kann – IRM approval letter sent electronically to TransCanada (edoced).

6/29/11 – J.Kann – The system was started up on June 1, however a valve needed to be replaced and the system was fully operational on June 6. Initial effluent samples showed elevated pH levels, so the system was shut down on June 7. The activated carbon was flushed and the system restarted on June 9. Effluent samples are now within acceptable limits. A site visit was made on June 6.

7/14/11 – J.Kann – RIWP discussed with Joe O'Connell on 7/7. Comments on the RIWP were sent in an email on 7/14 (edoced).

9/8/11– J.Kann – A response to the 7/14 comments were received on 8/26 and discussed with Joe O'Connell on 9/1. Although we don't fully agree with some of the responses provided, the plan is acceptable and will be approved.

On August 15, 2011 there was a spill called in for the site (1105493). There was a spill from a Con Edison manhole. Due to the

extreme amount of rain in a short period of time on Sunday and Monday (August 14 and 15) elevated groundwater levels mobilized the kerosene that eventually made its way into the Con Edison manhole along 36th Ave. (south service road to the Roosevelt Island Bridge). Surface water runoff combined with elevated groundwater levels allowed for the manhole to overflow and kerosene to spill on to the pavement, down the street and in catch basins which discharge into the East River. Clean up of the manhole and pavement was performed by Waste Recycling Solutions and transcanada had pads thrown down in the river. After a conversation with Greg Pryor (transcanada) and email was sent to him requesting additional information relating to the manhole.

9/9/11: J.Kann – email approval of RIWP and Addendum sent to transcanada (edoced).

5/31/12 – Austin – Received final EMIS report from Con Edison under spill # 0912393, where a Con Ed utility vault was impacted by this plume – Con Ed indicated that the cleanup in the vault was completed, and we closed spill # 0912393. – end

6/15/12: Kann – received RIR on May 8, 2012 edoced it and it is under review.

6/25/12: Kann – received an email from Greg Pryor requesting that well GTSB-5 be added to the IRM system. Responded as follows

"Conceptually, the Department is fine with including GTSB-5 to the system. However, TransCanada must submit a modified IRM.

The RI indicated that GTSB-5 has had increased product levels since the 2010 spill. TetraTech states in the RI that they don't believe the increase is attributable to the kerosene spill. Does TransCanada have any idea what the source of the increase is?

Keep in mind that the stipulation agreement only covers the kerosene spill. If it is determined that another source exists, the stipulation agreement will need to be modified."

8/1/12: J.Kann – completed review and drafted comments. Sent up BHTV data to CO Ottaway for comment on 7/18. Spoke with C. magee on 7/26. Provided Tetrattech email to C. Magee. Rcvd OM&M semi-annual report from TransCanda on 7/19. Reviewed the OM&M report and had no comments.

8/3/12: J.Kann – received feedback from chris magee. Discussed site and comments with Joe O'Connell today. Will modify my comments to address additional concerns discussed.

8/6/12: J.Kann – comments on RI emailed to TransCanada and edoced.

#### Caller Remarks:

Caller reports contained in an underground concrete vault. Pipeline failed. Cleanup company has been contacted. Unknown name at this time per caller.

#### DEC Investigator Remarks:

Sharif Rahman responded on Sunday.

Ken Yager reports on Monday morning that 6000 gallons of No. 6 was released and recovered. The line between the dock and the tank farm released product through a corrosion hole under the insulation. Release was contained within a 73-foot long, concrete trench; there was no environmental impact. Keyspan workers made the discovery in time. Corroded area will be repaired by welding today. The trench was steam cleaned yesterday. Ken will e-mail a report with photographs. Ken is at 718 – 706 – 2702. Breen

Ken Yager reports on Tuesday morning that the clamp was installed last night, but has not been pressure tested. This is the dock line which connects barges to the tank farm. As such the line sees intermittent rather than constant use. This pipe is installed just a few inches from the bottom of a six foot deep trench. The mode of failure is assumed to be water intrusion that got inside the insulation. Key Span engineering is proposing to 1) replace the entire 73 foot section of pipe and 2) relocate the new pipe higher in the trench. Trench has received its first (preliminary) cleaning. Crews are standing by to do the final cleaning. Ken is e-mailing over the photographs he has taken. Breen

1-23-07. Inspected spill site with Ken Yager. Trench is totally lined with concrete; there are no penetrations. The purpose of the trench is to permit the piping to cross a roadway. The dock line is above ground. It travels east from the dock for perhaps 200 feet, then drops into the trench and turns north. The trench runs south to north. The piping exits the trench at the north end, turns west and travels perhaps 150 above ground toward the dock. The trench has removable concrete slabs covering it. The concrete slabs are thick enough to support vehicles on their way to the dock.

See eDocs for Keyspan report.

2-13-07. Ken Yager reports line is repaired and in service. Line is monitored whenever it is in use, as a precaution. They have submitted repair plans to FDNY and gone out for bids. First bid was \$200K to replace 73 feet of pipe. Ken thinks that price is excessive. Expect to replace the pipe in a month or so. Will send us plans.

06/22/10 – changed Lead DEC to JMOCONNE (JOC)

04/14/11–J.Kann – DEC lead changed to J.kann

#### Caller Remarks:

UPON REMOVAL OF 4,000 GALLON GASOLINE TANK SOIL CONTAMINATION WAS  
 DISCOVERED THRU SOIL SAMPLE ANALYSIS.

#### DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead DEC Field was "ROMMEL"  
 This gasoline spill case has been reassigned from DEC (Sigona) to

Rommel on January 7, 2004.

DEC (Sigona) called Jennifer Juhas (Tyree) on 5/6/99. She did not have PBS#, but will locate and call back DEC. Tyree encountered high levels of hydrocarbons, and report will be sent to DEC.

On November 16, 1999, DEC Sigona spoke to Soyna Maynad at IT Corporation (518) 783-1996. She had copy of tank closure and would forward to DEC (Sigona). Ms. Maynad will investigate PBS registration. Tank inside building and removed, problem with site assessment.

DEC Sigona received tank closure report on 11/17/99.

DEC Sigona sent letter to OGS on 12/17/99 requeststing followup investigation and registration of tank. No PBS records found.

M.Dunham: Closed 07/08/05 – Report (03/10/00) from Tyree indicates no volatile or semi-volatile compounds detected above standards in soil or groundwater.

**Caller Remarks:**

soil sample results through bottom of cleaned tank to be abandoned in place.

---

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND"

PTC cleaned the tank in anticipation of abandoning it in place. Soil samples were taken through the bottom of the tank.

PTC says the samples are all OK except :

Benz(a)anthracene (limit is 224, sample was 364)

Benzo(b)fluoranthene (limit is 61, sample is 189)

PTC says the land is owned by the Feds, but the tank is owned by NYC Schools. Schools contact is James Merlo 718-349-5738

Contaminated Soil letter will be sent to Mr. Merlo

9/9/2003 Sangesland reviewed a submittal from PTC which confirmed the lab sample results listed above. Based on these samples which were taken through the bottom of the buried tank, the tanks can be abandoned in place and the spill closed out.

Caller Remarks:

BELIEVES THEY MAY HAVE LOST 1000 GALLONS, WERE FILLED UP YESTERDAY AND NOW GONE, BUT CANT SEE LEAK: STILL INVESTIGATING

DEC Investigator Remarks:

5/19/05. J.Krimgold spoke to Mark (PTC). They cleaned nth tank 2 days ago, but the owner did not want to test it. Delivery (2500 gal of #6 oil) was made yesterday and the gage was checked before and after delivery. The gage showed 33" and today only 27.5" meaning that ~500 gal was not accounted for. Tank will be pumped out and tested. CSL letter has been sent.

5/23/05. According to Mark (PTC) the tank was pumped out on 5/19/05. No oil was coming back from outside the tank. Owner want to replace/repair the tank, but refused to test the tank. YK.

Info:  
 Neil Wichnia – Building Manager @  
 Maxwell–Kates, Inc.  
 9 East 38th Street, 6th Floor  
 NY, NY 140016

10/17/05. J.Krimgold reviewed the letter report submitted by Eastmond & Sons dated 9/14/05. Based on the investigation results presented in the letter and previous investigation, no contamination was found around the UST. Moreover, it appears that spill was reported due to and erroneous reading to the tank gage. NFA letter.

caller was contecated by heating service man do to a visable leak tank is above ground in basment spill seems to be confined in basment further investigation is underway now tank is being pumped out to start

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ROSSAN/VOUGHT"

8/8/2002-VOUGHT-Site visit by Sangesland and Vought on 12/12/2002. Building owner is Steven Malinowski (CA Rich Consultants 516-576-8844). Tank is 66 years old and is 5,000 gallon steel tank. Petroleum Tank Cleaners on-site and performing cleanup consisting of pumping remaining fuel from tank, pump out sump pump, powerwash floor and sump. A total of 600 gallons of oily water was removed from the tank (waste disposal manifest and work invoice provided to NYSDEC). Spill on concrete and DEP contacted regarding discharge to sump pump. No release to underlying soil due to excellent condition of concrete floor. Tank in secondary containment which failed. Malinowski will install entirely new system once bid package approved by tenant board.

2/12/2002-Receive call from Malinowski that tenant board has approved bid proposed by Eastmond & Sons to replace tank in same containment vault (invoice sent to NYSDEC).

6/20/2002-Receive affadavit from Eastmond & Sons (Neil Tomasetti 718-378-3000) regarding installation of new AST verifying that

new tank satisfies all NYC Building Department standards.

7/15/2002–Receive copy of signed contract between CA Rich and Eastmond & Sons to remove old tank and install new tank. Spill closed by Vought.

Caller Remarks:

tank leaked causing the spill.contimanited soil found by borings.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ZHTOMIRSKY"  
Former York Hunter site. PBS #2–455784. YK.

3/09/06: This spill transferred from I. Islam. to Q.Abidi.

06/20/06: DEC Lead transferred from J. Kolleeny to J.A. Maisonave. JAM

6/21/06: Reviewed the Site Specific Investigation Plan proposed by LiRo for this site. URS has assumed management of this project and plans to perform this investigation. This is apparently the first investigative effort to evaluate potential impacts from petroleum USTs at the site. The site has 3 vehicle fuel tanks that were abandoned in place. Also on-site are 2 unregistered gasoline tanks that may have been abandoned in place. The investigation plan proposes drilling six soil borings and four monitoring wells. I spoke to Tim Burmeyer of URS (phone: (716) 923-1115) about the proposed soil borings and made adjustments to the locations of those borings. I will draft an approval letter summarizing the adjustments and comments. JAM

6/22/06: Approval letter for the SSIP was finalized and issued to:

Afsar Samani  
NYC Department of Design & Construction  
30-30 Thompson Ave.  
Long Island City, NY 11101

The letter requested one extra soil boring at the north end of the site to evaluate the fill port for the 2 unregistered gasoline tanks. I am expecting URS to notify me of the work schedule. JAM

7/25/06 Received call from Tim Burmeyer at URS on 7/11/06. He informed us that the NYCDEP will be constructing a Distribution Chamber for a water tunnel in the area where the 3 USTs are supposed to be on the southern end of the site. The NYCDEP performed an environmental assessment on site and did not locate any USTs; however, the area where the USTs were supposed to be will be excavated to bedrock and all soil disposed of when the distribution chamber is constructed. The NYCDEP began drilling pilot holes to the water tunnel on July 24.

URS will review files in the NYCDDC archives to see if any maps include the locations of the USTs on the southern and northern ends of the site. URS will amend the SSIP if needed. JAM

8/25/06 Email message from T. Burmeyer of URS. They are scheduled to drill at the north end of the site on September 7 and 8. Work includes 4 soil borings and 1 monitoring well. – JAM

3/21/06 Reviewed Soil and Groundwater Sampling Results – Request for Spill Closure Report submitted by URS and dated Dec 12, 2006. Between Oct 4 and 6, 2006, URS advanced 4 soil borings and installed one well on the north end of the site in the area around unregistered gasoline tanks. During the advancement of each soil boring, PID readings ranged from 0 to 72 ppm and odors were detected. Soil Analytical results indicated that no VOCs were present at concentrations above TAGM. SVOC exceedences were detected at each soil sample. Groundwater analytical results showed that no SVOCs were detected and several VOCs were detected but concentrations were below criteria.

URS recommends closing this spill case because no VOCs were detected in soil or groundwater above their respective criteria and SVOCs detected in the soil pose no threat to human health or the environment.

I sent URS an email requesting additional information regarding the south end of the site where three tanks were registered. This area is under construction by NYCDEP for a water tunnel distribution chamber. URS will submit an addendum to this report. – JAM

4/27/07 Reviewed Shaft 33B Project Update Report, submitted by URS and dated March 26, 2007. Report summarizes work performed by the NYCDEP to construct a water tunnel distribution chamber at the southern end of the site where 3 2,000-gallon tanks were located. According to the report, "3 USTs were located in the current construction area but were removed by an unknown party before the project was initiated." No end-point samples were taken from the excavation however, the former tank locations and the surrounding area was excavated to bedrock for the distribution chamber. Soil samples taken near the former tank area for characterization prior to construction were analyzed for VOCS and SVOCs. No VOCs were detected and some PAHs were detected but are common of fill material. This information is located in the appendices of this Report. URS requests closure of this spill case.

Since the area surrounding the USTs in the southern portion of the site was excavated it is likely that if any contamination was present it has been removed. This spill poses no threat to human health or the environment and was closed. An NFA was issued today. – JAM

#### Caller Remarks:

caller was doing tank removal and found contaminated soil unknown what product is – caller cell phone 914-589-9402

#### DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "MARTINKAT"  
 1/11/2001 Sangesland spoke with Steve Grens (AKRF Environmental 718-949-7336)

AKRF pulled four 1,000 gallon tanks (gasoline?) from under the slab floor of a former garage building. Building is still on the site and has approx 12' to 15' foot ceilings over the tank area.

Bedrock at the site is at between 7' and 12' depth. Contamination was found in the excavation. Sangesland directed AKRF to excavate as much of the contaminated material as possible then take end point samples.

Because there were four large tanks at the site, the DEC will require the installation of at least 1 well at the site.

SEE 0130013

4/23/02 CLEANUP UNDER THE VOLUNTARY CLEANUP PROGRAM. SMM.

**Caller Remarks:**

INSIDE THE TANK LEAKED AND IS CONTAINED: CALLER WOULD LIKE DEC TO CALL HIM BACK

**DEC Investigator Remarks:**

4/3/06-Vought-Daytime responder. Vought responded to site and spill was approximately 20-30 gallons of #6 fuel oil in secondary containment (no cracks) of UST. AL Eastmond(718-378-3000) and are removing oil from secondary containment, pumping UST dry and installing temporary tank on 73rd Street. Oil was first noted in secondary containment this morning. No effect to sump pit in adjacent boiler room. Tank is 15000-gallon partially buried UST with secondary containment on three sides of tank. Fourth side is buried in concrete. Site contact is Angel Pena and super is Kirk Corrigan (212-628-7919) and managing company is ACamp. Vought called Brown (212-508-7200) and they are not operating the building. Vought called emergency contact Bill Manion on PBS (212-628-7919) and Bill Manon no longer works at management company. Vought required: 1) tank tightness test 2) updated PBS registration. Letter should be sent to:

Tom Teeple  
 c/o 374 Street  
 8 West 38th Street  
 NY NY 10018  
 7th Floor  
 Phone 212-986-0001x160  
 fax 212-986-0002

Further contact should be with Teeple. Vought sent out tank tightness test letter with additional requirements of: 1) submission of test results 2) updated PBS information.

05/17/06–Vought–Spill transferred from DEC Vought to DEC Ketani as per DEC Austin.

6/16/06 – Raphael Ketani. I tried to reach Mr. Teeple (212) 986–0001, ext. 160, but could only leave a message.

6/19/06 – Raphael Ketani. Mr. Teeple called me and said that the tank was tested twice and a small leak was detected. He added that they expect to start work Wednesday after they meet with the co–op board and get approval.

7/18/06 – Raphael Ketani. I spoke to Mr. Teeple. He said that he will send me the tightness test results, the PBS application, and a cover letter describing what is taking place and what they plan to do. He said that, right now, Controlled Combustion has been contracted to replace the tank and do test borings. I will send a PBS form to:

Tom Teeple  
Director of Management Services  
AKAM Associates  
8 W. 38 Street  
NY, NY 10018

8/4/06 – Raphael Ketani. Linda Andersen of AKAM (212) 986–0001, ext. 143 (7th Floor) called yesterday and requested the blank PBS Applications. I will send them to her today.

8/7/06 – Raphael Ketani. I received a package of documents containing both tank test results and the agreement for work between the contractor and the owners of the building.

8/23/06 – Raphael Ketani. I left messages for Mr. Teeple and Ms. Andersen.

Mr. Teeple called me back and said that they have received the permits to remove the old tank.

11/7/06 – Raphael Ketani. I tried to reach Mr. Teeple and Ms. Andersen, but could only leave voice mails.

The PBS case #2–113360 lists the 15000 gal. tank as still active.

Mr. Teeple called me back and said that they have taken soil samples, and installed the new tank and are waiting for some parts. I told him someone has to do the revised PBS form. He asked who. I told him it could be anyone, but I needed the original signature of the owners on the form. He said that even though I sent the form, he couldn't find it now and asked that I send another one. I sent the form to his attention today.

On 7/18/06, I sent the PBS form to Mr. Teeple. On 8/4/06, I sent another PBS form to Ms. Andersen.

3/22/07 – Raphael Ketani. Mr. Teeple called back. He said that the tank removal, room and soil cleanup, and tank reconstruction finished in January 2007. He said that he is sure Controlled Combustion has the soil results and he will have them send the

results to me. He added that the PBS form is probably ready to go, but he has to contact his assistant, who is supposed to be working on it.

3/27/07 – Raphael Ketani. Ms. Linda Anderson (212) 986–0001, ext 143 called me back to confirm what documentation DEC needed to close the case. I told her that we must receive the revised PBS form with the original signature, the soil analytical results, manifests for the removed soil, and a cover letter describing what happened and what was done to clean up the spill. She said she will have this done.

4/11/07 – Raphael Ketani. Linda of AKAM called and requested a 1 week extension to get DEC all of the paperwork. I granted the extension.

5/23/07 – Raphael Ketani. I checked the PBS registration. It shows that the 15000 gal. tank was closed and removed and the 13000 gal. tank was put in service in 1/2007. I also received a FAXed package of documents from Linda Andersen of AKAM. The package contained analytical results, waste manifests, and bills from Allstate ORC. The analytical results showed that the VOCs from each of the 3 samples were either non–detect or very far below the RSCO. The results also showed that the SVOCs were from non–detect to nor more than several times the RSCO limit for benzo series analytes.

Based upon the analytical results for 10/25/06, the waste manifests and the paid bills, I am closing the spill case.

Caller Remarks:

A OIL LINE LEAK AT THIS LOCATION: OIL GOING INTO TANK ROOM: CAN SEE CONTAMINATION UNDER SIDE WALK:

---

## DEC Investigator Remarks:

3/29/05 – Austin – Previously unassigned spill; reassigned to Austin for transfer up to Central Office for review/closure

6/8/05 – Project transferred to TLGibbons in Central Office , Albany

7/6/05 – Spoke with Mark Salamick, the spill caller from Petroleum Tank Cleaners, 917–559–5519. He said they sent the owner, AKAM Associates, 212–986–0001, a proposal for work but did not get job. His AKAM contact was Tom Teeple. Said A.L. Eastmond also bid job. Said spill was @ SE corner of 74th and 2nd Avenue. Spoke with Teeple. Said A.L. Eastmond was hired to do work. Fuel oil leak (#6) related to fill line leak. Impacted beneath sidewalk, driveway and fuel tank. Tank test ok. Spoke with Kurt Corrigan, super @ building, 212–628–7919. He said he would have Renee Lewis, A.L. Eastmond call me.

7/6/05 – Spoke with Mr. Lewis, 917–299–7257 (cell) or 718–378–7000 (Ext. 15). They have cleaned what they can access of the #6 spill without risking structural problems. Arrange to meet @ site.

7/12/05 – Meet Rene and Kurt @ site. Went into basement tank vault area. Tank in cement vault. Clean except for minor spill along wall and within vault area. Partial removal of wall to access spill area from broken fill line. Cleaned up what they could, replaced fill line. He will send me final report.

10/25/05 – Tried unsuccessfully to get final report from AKAM and A.L. Eastmond. Close site based on visual inspection.

Contaminated Soil Letter sent to:

Jerry Illiano  
Senior Stationary Engineer  
Goldwater Memorial Hospital  
1 Main Street  
Roosevelt Island, NY 10044

Fax 212-318-4769

6/21/05. Reassigned from S. Rahman to J. Zhao (MOSF facility). YK

Stipulation Agreement sent.

06/23/06 – Zielinski

In her e-mail to Chet Bijoor, dated May 5, 2006, Jie Zhao approves a work plan for the site investigation and tank testing. A report from these activities must be sent to the department.

07/17/06 – Zielinski

Chet Bijoor, Chief Environmental Engineer of Warren and Panzer, calls and says that soil borings will be conducted on July 20, 2006.000

07/20/06 – Zielinski

Soil boring are conducted by Warren and Panzer Engineers at seven locations, according to an approved plan. Since two areas previously selected are difficult to penetrate by a geoprobe, locations at a parking lot—east of underground tanks—are selected instead.

07/21/06 – Zielinski

A tightness test of tank #8 is performed by the Petroleum Tank Cleaners. The tank fails the test, and the company decides to check the tightness of a ventilation line. If it passes the test, other tank lines will be checked.

05/10/07–Hiralkumar Patel. case merged into spill #: 0701429 and will be investigated under new case #.

07/23/07–Hiralkumar Patel. received supplemental Phase II report from Warren & Panzer. they collected three soil samples from line area of tank #7. no contamination found in any samples.

administratively closed.

**DEC Investigator Remarks:**

5/8/07 – Raphael Ketani. I received a call from Dave Hermantan of P.W. Grosser (631) 589-6353 stating that his company is the consultant for the Bentley Hotel at 1150 York Avenue (500 E. 62 Street) in Manhattan. He stated that his company was putting together an environmental plan for the hotel and that there are gasoline odors in the lobby. He said that there is an Exxon-Mobil gas station next door at 1132 York Avenue. He said that this has been an ongoing problem for several months now.

A little while later, Mr. Hermantan called back to say that he had talked to his supervisor and there isn't an odor problem. I

responded anyway and made a site visit in the morning. I met the assistant general manager of the hotel, Erika Cianciulli (212) 644-6000, and she showed me the lobby and the garage beneath the hotel and the gas station.

The vapor levels in the lobby were about 120 to 150 ppb, according to the PID meter. I didn't sense any odors. The garage ambient vapors were 170 to 200 ppb, and the odors were of exhaust. However, the southwest corner of the garage had vapor concentrations of about 300 ppb. I did not sense any gasoline odors. However, Ms. Cianciulli said that she does sense gas vapors on warm days and when the station gets a fill up.

I told Ms. Cianciulli about my findings and went to see the manager of the gas station. I met Eyaniman Palouki, manager (212) 935-7467, and told him why I was here. He gave me a copy of a letter from Gemstar and told me that some people from Exxon-Mobil had visited the gas station in March 2007, did some tests and left.

I contacted Gemstar (718) 442-8200, but could only leave a message.

5/10/07 – Raphael Ketani. Mike Meyerhoffer from Kleinfelder Inc. (631) 218-0612 contacted me in response to my call to Gemstar. He said that Thomas Gibbons in Albany DER was the case manager for the spill case involving the gas station. He said that a consultant from his company did a vapor survey in the garage with a ppm PID meter and detected 0.0 to 0.2 ppm total VOCs. He said that quarterly reports are submitted to Mr. Gibbons. Mr. Meyerhoffer added that there is a vapor abatement system in the vault for the gas tanks. I told him that since Mr. Gibbons was involved in the active spill case, then I will leave it up to him to monitor the situation.

May 2010 – The SVE system has been operating since November 30, 2005. OM&M is conducted monthly. It has been observed that during tank refills for this active service station that there is a spike in recovery volume, suggesting that there may be a tank leak, although pressure tests of the tanks have indicated that the tanks are sound. The Department requested that the USTs be reevaluated by an independent tank tester to determine the source of these recovery spikes. The tanks were tested on November 10, 2009 and found to be sound. Other options will be discussed with the consultant. The latest SSUR was issued May 25, 2010. OM&M and VES sampling continues every two months with results consistent with the previous SSUR. results.

Nov. 2010. Kleinfelder called to say that in January or February 2011 the tanks, tank vault, and associated Vapor Abatement System (VAS) will be removed as part of EM divesting itself from this property. EM wished to close the spill and the consent order at that time.

July 2011. Tanks that were in a basement vault have been yanked. EM has submitted a request to close. It is being reviewed by staff.

Project transferred to J. Drumm on 11/22/11. (11/25/11)

Pea gravel surrounding the tanks tested positive for diesel range organics. PM from GES does not want to sample under the parking garage floor due to high water table. GES is reviewing options for determining whether any contamination exists under the former tank area. (1/27/12)

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "DEMEO"  
 1/23/04 TJD

Dave Yudelso called concerning site. A property transfer is pending on site. A work plan is being prepared by PW Grosser to investigate if any leak occurred from this tank. Dave states repairs and retest of tank occurred but is unable to produce any documentation. 10K UST tank is located beneath center of building, inside. The work plan will propose three borings along tank centerline.

2/5/2004 Sangesland spoke to Robert Bertlesman (leaseholder) He says the tank is in service and is under the floor in the middle of the building. Sangesland informed him that use of the tank was against the law until the spill number is closed out. The soil borings which are needed can be done adjacent to the tank, but a Test Plan for the location of the borings would need to be submitted to Tim DeMeo for approval prior to the work being done.

Sangesland faxed a copy of this spill report to Mr. Bertlesman.

2/19/04 TJD

Attorney Dave Yudelson (representing owner) contacted Demeo regarding access problems with site tenant (RCN). Dave states building owner wants to move forward with an investigation but tenant will not provide access. He further states that tank is still in use after failing the tightness test in September 2000.

Standard TTF letter mailed to registered owner and faxed to Yudelson @ 212 906 9032.

3/18/04 TJD

Tank test performed – passed. Subsurface investigation performed revealing low level SVOC contamination likely caused by historic fill. Site does not meet standards. Spill closed.

**Caller Remarks:**

Tank test failure on UST. Tank to be removed. Pending assessment. Request callback ASAP from Spill Responder.

---

**DEC Investigator Remarks:**

DEC Piper spoke with kristen. As per conversation tank failed a tightness test. It was first believed to be a wet leak though after retesting it was found to be dry. Possible oil in line gave false reading. ATEC will return tomorrow and pump out tank and investigate. Tank will be replaced. followup needed.

DEC Piper received documentation that tank was replaced. Endpoints show low level SVOC and VOC. Spill closed. See edocs if warranted.

-----  
DEC Investigator Remarks:

7/25/07 Called Gary Dorin of Edison Properties, LLC (973)849–2546. Left message requesting a call back. bf

8/17/07 Pasquale Soriano of Edison Properties called (973)849–2600 and left message. He is in charge of this building.

8/21/07 Mr. Soriano called and left message. I called him back. All Climate is handling repairs. Tank is AST. They are under contract to install new boilers. Sent ttf letter to:

Pasquale Soriano  
Edison Properties, LLC  
100 Washington St.  
Newark, NJ 07102

bf

9/6/07 Received message from Carol 718–894–7505. Tank was repaired (she's not sure of repairs made) and passed retest. She is requesting a two week extension. I told her that was fine. bf

9/14/07 received letter from Caroline Gallego of All Climate. Letter included 3 sheets from Petroleum Tank Cleaners showing that manhole was resealed with new nuts and bolts.

10/9/07 Received call from Caroline Gallego of All Climate Mechanical Corp. Wanted to know status because she sent in a report from PTC and she requested a NFA letter. I did not receive the report, so she faxed it to me. It was a tightness test report and not a closure report. Called Caroline back and explained that a response to my 8/21/07 letter is required. She said she will contact PTC and request a letter. Received another call from C. Gallego. She said that All Climate did the repair work. She faxed a letter to me stating no contamination found. NFA. DEC Investigator Remarks:

TTF letter sent to PBS Contact:

Ms. Donna Weinberg  
Lawrence Properties  
855 Ave. of the Americas  
New York, NY 10001

03/20/06–Sharif Rahman– Resent the letter to above address after spoken with Donna Weinberg,(212)868–8320, Fax:(212)279–2119

05/08/06 Sharif Rahman– I spoke with Ms. Georgia @ 212–868–8320 x 360 and she indicated that the former tank would be closed in place and new above ground tank will be installed.I emphasized her about the subsurface investigation before close out the tank.

05/17/06 Sharif Rahman– I spoke with Mr. Galdun,(646)542–3465 from GFE. He indicated that they did borings around the tank and found no contamination except at one location near the oil pump which is used to transfer oil from tank to boiler.

11/07/06 Rahman– Left a messege for Ms. Barton to follow up about the required investigation work which were outlined in Department's October 16'06 letter.

03/02/07 Rahman– Department rec'd response letter from Galdun Frankel Environmental, dated 01/29/07.GFE found no evidence indicating that the site UST had leaked petroleum to the environment.This conclusion is supported by the lack of any oil staining or seepage on the concrete vault walls that enclose the UST.The only area where physical evidence of petroleum release was found consisted of stained concrete flooring around the oil pumps located adjacent to the west side of the UST vault.The soil borings drilled near the oil pumps showed some evidence of petroleum impact within the thin layer of soil above bedrock.No free product was encountered.The findings of the discharge investigation pointed to intermittent leaks from the oil circulation pump as the cause of the release.GFE concluded that there is no potential for the conditions discovered beneath the floor slab to adversely impact ground water.

08/24/07 Galdun Frankel Environmental proposed to take soil sample from the bottom of the tank.Work plan dated April 13, 2007 is in file.(SR)

The spill case is administratively closed as the RP failed to perform additional investigation to show the tank did not release any oil at the bottom.(SR)

09.20.05. SR//Teresa Austin replied by a letter stating they are going to install temp. tank to replace the existing tank and re test it. That work was scheduled to be done in August.

10.05.05 SR// Sharif reviewed and approved the site assesment work plan.

12/28/05 Sharif//Rec'd and reviewed investigation summary report prepared by Jade Environmental, Inc. Six soil borings were advanced around the tank and analyzed for VOC/SVOC. Soil analytical results shows exceedance for Xylene, Benzo(a)anthracene, Chrysene, Napthalene at the north end of the tank. Reason for not removing contaminated soil is not justified in the report. Removal of contaminated soil is recommended. Moreover, in case of closing the tank in place, samples should be taken by installing borings through the bottom of the tank to identify any underlying contamination that might exist. Mr. Dave Pelletier (845) 897-2188 and Ms. Laura Bruno (212) 376-8600 have been relayed the requirement for considering closure of the case. 10/11/06 Rahman-- Inspected the excavation work at the site. After removal of the contaminated, stained soil, end point sample will be collected. A new aboveground tank will be installed.

12/06/06 Rahman--Closure report available on edocs. Contaminated soil was removed after breaking the concrete covering the tank. Approx. 48 tons of contaminated soil went out for disposal. Waste disposal manifest was provided. Six end point samples were sent to lab for analysis. VOC/SVOCs were below TAGM limit except Chrysene which is slightly above the limit. NFA required. New tank needs to be registered.

RECOMMEND TO ISOLATE AND RE-TEST

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "VOUGHT"  
4/25/2003 DESK-TIPPLE/ TTF LETTER SENT

6/11/2003-Vought -Spoke with Antoinette Ollivierre (Clean Harbors-718-387-5600) who was hired to perform soil borings. Clean Harbors was hired by controlled Combustion.

9/5/2003-Vought-Received call from Jerry Williams regarding status of site. Vought reviewed closure report received 7/17/2003.

Piping was isolated from tank and separately tested. Pipin passed isolation test and UST failed test. Tank was removed and four borings were performed by Clean Harbors on three sides of tank to a depth of 12' (refusal on bedrock at 12'). Fourth side was occupied by residence (no odor complaints). Soil analyticals showed no TAGM 4046 exceedances.

NYSDEC requires: Soil description due to minor PAH exceedance (Chrysene at 930ppb).

9/11/03–Vought–Letter to NYSDEC from Controlled Combustion including soil description of fill material (cause of PAH exceedance). Spill closed by Vought. NFA sent by Vought.

## TANK TO BE UNCOVERED AND RE-TESTED

-----  
DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "M TIBBE"

August 10, 2005

Jason Pelton, as part of spills backlog initiative, contacted responsible party (Roosevelt Island Management Corp) to obtain information on Spill#9802725. Initially spoke with Doryne Isley, with the Roosevelt Island Management Corp. Doryne faxed a copy of the invoice that Petroleum Tank Cleaners submitted for UST repair work following the tank test failure reported on 6/1/1998. The tank repair work included uncovering the UST along with the excavation, removal, and replacement of the UST piping. During this repair work, there was no evidence of a petroleum release and soil contamination. Doryne faxed a copy of the Petroleum Tank Cleaners invoice for the UST repair work and a tank tightness test completed on 9/14/1998. The September, 1998 tank tightness test passed.

Jason had a follow-up phone conversation with Bradley Cohen (Roosevelt Island Management Corp Director of Operations). Bradley sent a more recent (4/24/2003) tank tightness test completed by Controlled Combustion. This tank tightness test also passed and was reportedly faxed to the NYSDEC. Bradley indicated that A-1 Crown Leak completed the initial tank tightness test using air. This test failed and the spill was reported by A-1 Crown Leak. There was no actual petroleum spill, but a tightness test that did not pass.

Based on the exposure of the UST and the excavation, removal, and replacement of piping during the September 1998 repair work there was no evidence of a petroleum release. The two tank tightness tests (9/14/1998 and 4/24/2003) document that the repair work was effective and that there are no tank integrity concerns. Based on this information, Spill Number 9802725 was closed by Jason Pelton on August 11, 2005.

Remarks prepared by Jason Pelton

REMOTE FILL FAILED

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "KOLLEENY"

4/7/03. Y.K. spoke to Nill Gallagher (BBM DOS). Leak in the fill line underground close to the tank #001. UST is still in service utilizing direct droop. Will excavate, repair and retest. Also, asked DOS to correct info. on PBS registration (single wall tank with interstitial monitoring ?).

11/05/03. J. Krimgold called Mr. Gallagher (718-334-9138) and left a message.

11/07/03. J. Krimgold spoke to Nill Gallagher. He stated that the failed tank has been out of service since 03/03. They started excavation today. Will inform DEC Monday on the progress and also on the testing of other tanks at this site.

Tanfered to J. Kolleeny on 01/12/04 and subsequently to I. Islam.

5/16/05- The site is under active remediation by LiRo Engineers due to other open spills (# 0001929 & 9913369) at the site. Therefore, this spill is closed to consolidate with motor oil related spill # 0001929.- II.

NEED to send a TTF letter

Nov. 25, 2005

A "Tank Test Failure Letter" was sent to:

Mr. Mitchell Berg  
 Maxwell-Kates Inc  
 9 East 38th Street- 6th Floor  
 New York, NY 10016

05/17/06-Vought-Spill transferred from DEC Vought to DEC Ketani as per DEC Austin.

6/15/06 – Raphael Ketani. I received the September 2, 2005 cover letter/narrative for the soil investigation at the site from Neil Tomasetti of A. L. Eastman & Sons and the 9/1/05 soil analytical results report. The analytical report indicated that there was no soil contamination. The letter 9/2/05 letter stated that no contamination was found.

Based upon the 9/2/05 letter and analytical results, I am closing this spill case.

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ROMMEL"

10/10/95: This is additional information about material spilled from the translation of the old spill file: TTF.

4/12/04–Vought–Spill transferred from Tang to Rommel as per Rommel.

11/29/05 – L. Alden – Site is the block (between 1st and 2nd Avenues and E. 59th and E. 60th Streets) situated beneath ramps to the Queensboro Bridge, formerly owned by York Hunter Construction Co. Refer to PBS # 2–601814. This site MAY be associated or combined with PBS # 2–455784 and spill #9513279, which are for 350 E. 60th Street, the property on the 60th Street side of the block. Search on property address turns up only one parcel for the entire block.

Property Shark search found 2 permits associated with the site:

3/9/94 – "Conversion of two existing underground 2,000–gal. fuel storage tanks and ancillary systems from gasoline to diesel.

Replacement of fuel pumping systems at these two tanks. Abandonment/decommissioning of one 2,000–gal. UST."

11/7/94 – "one 550–gal. UST to be removed. One pump island and dispenser to be removed. All as per plans filed herewith."

Sent letter to NYCDOT requesting information. Vivian Marcovicci (718–793–7186) called back and informed me that this site is not a DOT facility. I am not totally convinced this is the case, due to the above comments on the other property on the block.

Suggested action: attempt to contact the Dept. of Sanitation.

11/16/06 – Austin – Reassigned to Patel for followup/review – end

11/27/06–Hiralkumar Patel. found another open case at this site. spill #: 9513279. Joseph Maison in remediation group working on this case. after discussing with DEC Kolleeny, case closed. refer to 9513279.

Category: Known petroleum or hazardous material release with minimal potential for fire/explosion (indoors or outdoors), drinking water contamination, or releases to surface waters.  
 Class: Willing RP – No DEC Field Response – Corrective Action Initiated or Completed by RP or Other Agency

Spill Date	Date Cleanup Ceased	Cause of Spill	Meets Cleanup Standards	Penalty Recommended
10/16/2002		TANK TEST FAILURE	NO	NO

Material Spilled	Material Class	Quantity Spilled	Units	Quantity Recovered	Units	Resource(s) Affected
#4 FUEL OIL	PETROLEUM	0	GALLONS	0	GALLONS	SOIL

**TANK TEST INFORMATION**

Tank Number	Tank Size	Tank Test Method	Leak Rate	Gross Leak or Failure
	30000	Horner EZ Check I or II	0.00	UNKNOWN

**Caller Remarks:**

tank failed test – no product spillage

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "DEMEO"  
 sent tank failure letter to marcus benner @9 west 47th street, 45th floor, ny ny 10019. 10/17/2002 ars

8/12/08: Changed Lead\_DEC field to 'Unassigned'. 2006 unannounced Site Visit did not produce sufficient documentation that potential contamination as a result of the tank test failure was cleaned up. Resident Manager Alexander Ferreras had a meeting so he could not provide documentation that I needed to close the spill. Next step: Call Resident Manager at 212-628-3500 or FAX a ltr. requesting documentation at 212-439-6120.

Austin – 9/30/09 – Spill project assignment transferred from Albany staff(Grathwahl) to Rahman, for further review and action. – end.

12/18/09 Spoke with Geovanni, Resident Manager. TTF was sent out to

SOLOW MANAGEMENT CORPORATION  
265 E 66th Street  
New Work, NY 10021  
Attn: Geovanni Bernardino(sr)

04/08/10 Rec'd letter report from Island Tank. There was no actual spill of petroleum when the spill was called in. Tank also passed the tightness testing. Problem in tank vent pipe (cracked in half) was fixed. Cathodic protection will be installed on the UST system. Case closed. (sr)

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

**The following DEC Investigator Remarks were available prior to 1/1/2002:**

No action by DEC Sigona. Waiting for results of the tanks test

On May 29, 2001, DEC Sigona spoke with Mark Huber, Chief Operating Officer, Abilene Inc, 2402 Neptune Avenue, Brooklyn, NY 11224. (718) 372-4210 said that about ten (10) days ago, a new 7,500 gallon tank was installed at 301 East 63rd Street. According to PBS records the facility's registration expired on February 4, 2001. DEC Sigona informed Mr. Huber to have the owner contact DEC to discuss the options available. He was informed that a violation existed for failing to renew and notify DEC of tank installation.

DEC Sigona will send PBS &amp; guidance to the contractor on May 29, 2001.

DEC Investigator Remarks:

send tank test failure (TTF)

12/19/05 Feroze. Spill is transferred from Ketani to Feroze.

01/23/06. TTF is sent.

01/31/06. TTF letter return to DEC.No PBS is found on this address.

02/13/05. Feroze TTF is sent to:

AIMCO  
21 East 40th Street  
New York, NY 10016

03/15/06. Spill is transferred from Feroze to Kumer Patel.

05/04/06–Hiralkumar Patel. Spoke to Diania at Petroleum and as per her database notes, petroleum had installed temp tank and cleaned old tank. no other information available. she gave me following contact information about owner/owner's representative.:

Maxwell Kates  
Contact: Neil Wishna  
Ph. (212) 684–8282

Left message for Neil.  
as Feroze sent out TTF to Aimco, got phone number of Aimco from petroleum.

Aimco  
PH. (212) 448–9720  
FAX (212) 448–9725

Spoke to operator at Aimco. Aimco is managing this property now. she asked me to send fax about what kind of information i need.  
property manager is David Pian.  
Sent out TTF at following address:

DAvid Pian  
Aimco  
21 East 40th Street  
Suite 1605  
New York, NY 10016

letter faxed to David.

05/16/06–Hiralkumar Patel. Spoke to David. he doesn't know anything about letter that i have sent on his name. he will check and will call back. asked him to do test again.

05/31/06–Hiralkumar Patel. Received fax from Stuart Schwartz from SNS Energy Distribution. abstract:

- A–1 crown leak company did tank test on May 30
- 1080 gal AST system failed the test and found dry leak
- no visible oil leaks
- will do isolation test by end of this week

Stuart Schwartz  
Chief Executive Officer  
SNS Energy distribution corp.  
PH. (631) 691–1700  
FAX (631) 691–1711

06/06/06–Hiralkumar Patel. Received letter which i got in fax on 05/31/06.

06/09/06–Hiralkumar Patel. received fax from Stuart from SNS Energy. abstract:

- did isolation test
- tank only passed the test
- presently, lines have been abandoned and temporary copper lines have been installed.
- preparing to install new lines

A–1 crown tested whole system on 05/30/06 and found dry leak and they did tank only test on 06/01/06 and found tank was tight. as this was dry leak, based on available information case is closed.

06/12/06–Hiralkumar Patel. REceived call from Stuart from SNS Enerty. they found leak in vent line. will send final report within 10 days.

06/16/06–Hiralkumar Patel. Received letter from Stuart. i have already got this in fax on June 9, 2006.

TANK FAILED DUE TO HOLE IN TOP OF TANK: TEMP PATCH WAS PLACED, AND THEN TANK PASSED, REMOVING TWO DRUMS OF CONTAMINATED SOIL:

#### DEC Investigator Remarks:

1/15/08 bf: Called Pro Test and left message with receptionist for John Leddy to call me back. Sent ttf letter to:  
 Linda Andersen  
 Akam Associates  
 8 West 38th Street, 7th Floor  
 New York, NY 10018

Spoke with J. Leddy. Contaminated soil found. Temporary patch held system tight during 2nd test. Will make repairs for permanat patch. I told him they will need to do sampling because of the contaminated soil. Called L. Andersen, of Akam, left message on machine.

Received fax from J. Leddy. Tank is #6 fuel oil and contaminated soil was found in a concrete walled manway where the hole in the tank was found. He believes it was probably a past overfill that contaminated soil in manway. If there is any other contamination, they do not know. bf

1/31/08 On 1/29/08, Received fax from J. Leddy. Failing results from 1/14/08 and passing results from 1/14/08. Sent soil contamination letter to L. Andersen at above address. bf

2/11/08 Received letter from Jerry Williams of Controlled Combustion. Authorization has been given to install temporary tank and to pump out, clean and perform an ultrasonic inspection. Will install 12K UST Work to begin week of 2/11/08. bf

4/10/08 received closure report and letter. Samples taken from top of tank not from sides and/or bottom. Tank retested and passed. bf

6/18/08 Received email from Nicholas Marrone of Miller Environmental Group requesting update. Called him at (516)876-7940 x-318. Left message on voicemail for him to call me. bf

10/8/08 Received fax from Neil Tomassetti of Eastmond. They installed a steel lining for the tank. A 4' X 8' area where the tank patch (failure) revealed no contamination. Also, suction, return, vent, and fill lines werer replaced. All areas excavated were visibly clean with no odor or discoloration associated with oil. NFA. bf

---

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND"  
TTF letter sent to

Mige Assoc.  
408 West 57th St  
NY, NY 10019

3/31/2004 Sangesland contacted Marlboro Realty (212-757-5220) concerning the open tank test failure from September.  
"Frances" said AL Eastmond abandoned the old tank in place & took the proper soil samples. A new tank has been installed and they are just about ready to start using it.

Sangesland called Rene at AL Eastmond. He said the soil samples were taken and the tank was properly closed out. He will prepare a report and submit it to the DEC "soon"

04/06/06-Hiralkumar Patel. spoke with Mr. Mungra at Eastmond and he will call back with information.

05/04/06-Hiralkumar Patel. called Eastmond, but Isaac and Rene both were in meeting.

05/05/06-Hiralkumar Patel. Spoke to Rene at Eastmond. he will call back with more information.

05/17/06-Hiralkumar Patel. Spoke to Isaac at Eastmond. he will call back with more information.

05/22/06-Hiralkumar Patel. Left message for Mr. Mungra.

06/06/06-Hiralkumar Patel. Spoke to Rene. he will call back with information.

06/09/06-Hiralkumar Patel. Left message for Ms. Mary, property manager (212-757-5220 Ext. 10).

06/19/06-Hiralkumar Patel. Left message for Ms. Mary.

06/22/06-Hiralkumar Patel. Spoke with Mary and asked her to call Eastmond for tank closure report.

06/29/06-Hiralkumar Patel. spoke to Maggie at management company. Mary is no longer working at this office. Maggie will talk to owner and will call back.

07/06/06-Hiralkumar Patel. received call from Ms. Gabriella. she will call Eastmond and will send final report.

07/31/06-Hiralkumar Patel. spoke with Ms. Garbriella. she will call Eastmond and will send documents.

08/17/06-Hiralkumar Patel. spoke with Garbriella Mineo. sent out CSL to Ms. Mineo at following address:

Garbriella Mineo  
408 W 57th Street  
New York, NY 10019  
Ph. (212) 757-5220 Ext. 10  
FAX (212) 541-7549

letter faxed to Ms. Mineo and Mr. Mungra at Eastmond.

PBS#: 2-189375

08/31/06-Hiralkumar Patel. received fax from Rene from Eastmond. as per letter report from Eastmond:

- observed corrosion around tank manhole
- clean tank and replace manhole and surrounding steel
- retest tank and it passed
- excavate and remove top portion of tank
- pour cement base and install (1) 2,000 gal double walled tank inside old tank
- backfilled area
- no product release

fax contains passing system test result. based on available information, case closed.

## Caller Remarks:

Caller reporting a tank test failure on a 600 gallon UST. On Scene Contact– Chris Baker– 212–832–4583.

## DEC Investigator Remarks:

07/22/10–Hiralkumar Patel.

11:22 AM:– spoke with TJ. he mentioned that site has one 600 gal double wall fiberglass UST. tank is being used to fill buses owned by the site owner. very minor leak found in stage I vapor recovery line (near spill bucket area). no soil contamination found during repair. system retested and passed. asked TJ to send email with tank test result and description of cause and action taken.

PBS #: 2–187860. as per PBS record, site has/had following tanks:

- one 4,000 gal gasoline UST, removed on 08/01/1999
- one 2,000 gal diesel UST, installed on 02/01/2000, in–service
- one 550 gal gasoline UST, installed on 02/01/2000, in–service

as per PBS record, site is owned by Roosevelt Island Operating Corp., and used by Roosevelt Island Bus Garage.

07/23/10–Hiralkumar Patel. received email from TJ (at 7:15 PM on 07/22/10) with copy of tank test results for gasoline and diesel tanks. both tanks were tested on 07/14/10 and passed.

based on information provided, case closed.

WATER MAIN BRAKE – SOIL AFFECTED 0 CHRIS ENGLEHARDT CONTACTED

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"  
e2mis notes 118333

Steam manager Ed Conway reports at 15:00 of asbestos release in soil at water main break on E68 st & York Avenue. Water main break occurred at 0430 and DEP tests of soil tested positive at 0900. Cleanup is ongoing as of 1530.

input by mctague 77472 Water main break exposed two abandoned 6" steam services and one 8" steam service. Bulk sampling from the 6" service tested positive for chrysotile asbestos. Bulk sampling from the 8" service tested positive for amosite. The 8" service was later exposed by City contractors digging to repair water main. Service was encased in a shell housing with some extremely small holes (possibly 1/4 inch) caused by corrosion, overall in good condition. It is unlikely that water main break affected this service. All samples indicate trace amounts of amosite, source of contamination could not be determined. Small amount of chrysotile (possibly .25 of an ounce) found on 8" steam casting. All insulation on services was intact.

Caller Remarks:

CON ED SPILL #147422 / WORKERS FOUND APPROX 1QT. OF UNKNOWN OIL FLOATING ON 40 GALS. OF WATER IN THE ABOVE MANHOLE – CLEANUP PENDING OIL SAMPLES

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ"  
Con Ed e2mis #147422:

3-7-03 @ 10:20

G Woods #11346 reports that while working on enlarging m12655 @ 436 e 69 st , Danella Construction discovered 1 pint of an unknown oil on top of 40 gallons of water in the structure. No oil filled equipment in the structure. Water is standing. No sewer . No sump. No dielectric filled feeder in the structure. I instructed G Woods # 11346 that he will need to apply a tag a.s.a.p. Samples are to be taken by chem lab. No initial cleanup action taken. Chem lab was notified to take samples.

Aroclor 1242 < 1.0 ppm EPA 608/8082

Aroclor 1254 < 1.0 ppm EPA 608/8082

Aroclor 1248 < 1.0 ppm EPA 608/8082

Aroclor 1260 < 1.0 ppm EPA 608/8082

3/13/03 11:00 R. Bruns #21106 of the environmental desk spoke to G. Woods # 11346 of C/M and verified as of this date no tag has been hung. He also states that this cleanup was given to

A. Carucci # 16289 planner for Mtce/Construction to handle the cleanup.

A. Carucci was then called & he will have crews on this job probably on 3/14/03.

Update 03/27/03 @ 07:30 hrs

M Luongo of Construction Management reported to N Muldoon # 18723 that after his crew arrived on location discovered that there was no oil in the hole. This was found out after placing a pad and no oil showed on the pad. No spill tag was not installed since there was no evidence of oil. There was no cleanup action

taken since there was no evidence of oil. Spoke to R Pellegrino about this incident.

Caller Remarks:

1 QT OF UNKN OIL ON 5 GAL OF WATER IN MANHOLE. NO TO 5 QUESTIONS. CLEAN-UP PENDING RESOURCE AVAILABILITY. CON REF #158842

DEC Investigator Remarks:

e2mis no 158842

John A Burke found approx. 1 qt of unknown oil on top of approx. 5 gallons of water at this location. Two samples have been taken 1for pcb and 1 for id. No sewer or waterway was affected. The source and cause of the spill is unknown. Environmental tag #42678 was installed.

There was standing water but no visual water movement. There was no sewer connection; no substantial cracks and a concrete sump could not be verified due to the amount of fluid in the hole.

Lab Sequence Number: 05-05070-001 – PCBs < 1 ppm; Analysis indicates the presence of a substance similar to a lubricating oil

Update: 05/29/05 @ 12:45 hrs

Michael J Dunworth 76117 U.G O.S reports the following

Clean Up Completion Date: 05/29/05 Time: 12:00

Details: Final Clean Up

Solids Removed: To flush truck

Type of solids: Some stone & sand

Barrels used: None

Liquids Removed: Yes approx. 5 gallons plus additional water from flush truck.

Method Used to Clean: Simple Green was used, and was washed twice, and power washed with flush truck.

Environmental tag removed: Yes #42678

Remediation Of Spill: Mr. Dunworth states that the only thing he was able to see was that there were visible cut marks around the metal casting of service box, and run off from street might have been the cause.

**Caller Remarks:**

IN SUMP IN BOILER ROOM

**DEC Investigator Remarks:**

Sangesland spoke to Meredith Hayes at GZA.

Oil was found in sump which appears to be coming from the tank vault area.

Unknown if this oil is part of the old spill from pre-1990 #6 oil or from later newer #2 oil tanks.

Old tanks were #6 and had an old DEC spill report – which was closed out.

Six new #2 tanks were installed in early 1990's and are now in a vault (old tanks were not in a vault).

GZA Plan – They will sample the sump and check if it's #2 or #6 oil. The sump will be pumped out and depending on the #2-#6 result, an investigation will be conducted to determine where the leak/spill/source is.

07/24/07-Hiralkumar Patel. spoke with Ms. Hayes at GZA. they have cleaned sump in basement. took oil sample for fingerprint and #6 oil kind of product. based on fingerprint analysis they are planning for further soil investigation around previous #6 oil tanks, which were located right under sidewalk.

Louis Wetstein

Director of Facilities & Operation  
525 East 68th Street  
New York, NY 10021  
Ph. (212) 746-7559  
Fax (212) 746-8930

Meredith Hayes  
GZA  
Ph. (212) 594-8140  
email: mhayes@gza.com

asked Ms. Hayes to send updates on schedule for soil investigation and site map with tank location and proposed boring locations.  
also asked her to send list of any old oil spills.

08/27/07-Hiralkumar Patel. spoke with Ms. Hayes. they did GPR to find old tanks. Ms. Hayes is preparing work plan (most probably site plan with proposed sampling locations) and will submit by tomorrow.

received email from Mr. Hayes including fingerprint analysis result and site map with proposed well location. they proposing installation of two wells to depth of 35 ft bg. map doesn't include tank locations and sump location where oil was found. fingerprint analysis didn't identify material as such (as assumed #6 based on visual observation), probably due to age of spill and weathering of product.

sent email to Ms. Hayes requiring complete scaled site map with all existing and former ASTs/USTs system locations, sump location where oil was found and proposed well locations.

09/06/07-Hiralkumar Patel. left message for Ms. Hayes to submit site map with all existing and former tanks and sump pit where they found oil, including proposed well locations.  
sent email to Mr. Hayes with the same.

09/10/07-Hiralkumar Patel. received email from Ms. Hayes with current tank locations, sump location and proposed well locations. as per Ms. Hayes, previous tanks were at same location as new tanks are. sump is located in mechanical room and is positioned in east-south direction from tank location.

10/11/07-Hiralkumar Patel. spoke with Ms. Hayes. they scheduled well installation but due to holidays and conflicts with community, they cancelled it and haven't heard from hospital yet about rescheduling. she asked to contact George Pecovice (212-746-1782) in engineering department at hospital.

left message for George.

10/15/07-Hiralkumar Patel. received call from George. he or Ms. Hayes will call back once they schedule test pit work.

10/31/07-Hiralkumar Patel. left message for Ms. Hayes.

11/01/07-Hiralkumar Patel. received email from Ms. Hayes. they are installing wells currently.

11/06/07-Hiralkumar Patel. received email from Ms. Hayes. she is no longer working with GZA. she asked to contact David Winslow

(dwinslow@gza.com).

11/30/07–Hiralkumar Patel. left message for David at GZA.

12/03/07–Hiralkumar Patel. received call from Mr. Kline, new project manager. they have installed two wells on north of existing tanks. screened soils during well installation and took soil samples. soil analyticals came back. they got groundwater sample from only one well. other well found dry. once get groundwater analyticals, will submit all data.

Steve Kline

email: stephen.kline@gza.com

01/17/08–Hiralkumar Patel. sent email to Mr. Kline requiring updates.

03/21/08–Hiralkumar Patel. received investigation report from Mr. Kline. abstract:

- currently, six 20,000 gal #2 oil USTs are located in a vault under truck loading area south of E 71st street
- piping system currently drains stormwater/groundwater that accumulates in the tank vault to an oil/water separator and sump location in the basement beneath the Annex building mechanical room
- local groundwater flow is expected to the east, towards the East river; mean river <-----elevation is reportedly 2.75 ft above mean sea level at the East river bulkhead
- two soil borings were advanced in the south sidewalk along E 71st street
- could not install borings within the truck loading area due to the presence of the vaulted USTs
- groundwater was observed at 13 and 15 ft bg
- MW–1 was installed to 25 ft bg and MW–2 was installed to 23 ft bg
- fill material consisting of heterogeneous mix of fine to medium sand, some fine gravel and brick fragments was observed directly beneath the concrete sidewalk to between 14 (at MW–1) to 15 (at MW–2) ft bg
- fill material under MW–2 is underlain by pieces of a boulder and then bedrock schist, which extended beyond the termination depth of boring
- no visual or olfactory evidence of contamination was observed in any of the soils
- competent bedrock was encountered at approx. 20 ft bg in MW–2; concrete backfill was observed from approx. 10 ft to 24 ft bg in MW–1
- two soil samples collected (one from each boring)
- one week after installing wells, found MW–1 did not have any measurable water; MW–2 only had couple of inches of water
- no contamination found in any soil or groundwater samples
- soil samples collected from the borings were at an elevation equal to the bottom of tank vault
- petroleum contamination reported for the spill was observed in a sump located 20 ft below the bottom of tanks on the western (and upgradient) side of tanks
- observation implies that the residual separate phase product (#6 oil) is preferentially moving down through unsaturated or drained backfill materials near the foundation walls independent of groundwater flow directions
- existing #2 oil tank installation includes automated tank monitoring and leak detection systems
- no petroleum contamination has been observed on the north side of the tank vault, and buildings with deep foundations exist on the other three sides of the tank vault

based on submitted document, case closed.

04/15/08–Hiralkumar Patel. received call from Angelina from GZA requesting NFA. sent NFA to Mr. Wetstein. letter emailed to Ms.

Hayes at GZA.

**Caller Remarks:**

came upon contamination during excavation.

**DEC Investigator Remarks:**

1/4/2006 Sangesland spoke to Stewart Kanoop from Langin Engineering  
He said the site is a vacant lot (Manhattan) being excavated for a new building  
A small section of the lot (18' x 12' area) has visible sidewall contamination and has standing ponded water in the pit.

Samples were taken of both the sidewalls and standing water.  
Results came back with hits for SVOC & Toluene.

Langen wanted approval to pump out and properly dispose of the standing water and to then continue to excavate the contaminated sidewalls. Contaminated soil will be staged on the site on a plastic liner. Soil will be tested and properly disposed of.

After this work is done another sample will be taken of the new sidewalls and of the new groundwater that recharges into the excavation site.

1/9/2006 Sangesland spoke with Stuart Kanoop of Langan Engineering. Most of the excavation work has been done. There is still a problem with contaminated side walls, but there are structural problems with the sidewalk and the building next door. He has requested a site visit to determine what additional work will be needed.

Sharif is on vacation, Jeff Vought will visit the site on 1/10/06 at 10 AM.

1/10/06 – Raphael Ketani. I arrived on site at 10AM and met Stuart Knoop of Langan Engineering. We walked over to the northeast corner of the site and passed by a pile of oil soaked bricks, broken concrete, and broken wood mixed with soil that was sitting a sheet of plastic. Odors were apparent only within 6 feet of the pile. At the northeast corner, Mr. Knoop showed me the area in question. I saw oil stained brick, broken concrete, broken wood, metal, and soil. The debris was sitting as one large pile with standing water with a sheen adjacent to it. The pile of debris had a slight oily odor and looked dark. Dark soil staining was seen on the west and south walls of the pit where the debris was sitting. Mr. Knoop told me that 20,000 gals. of contaminated water had already been sucked out from around the debris. He asked me what should be done. I suggested to him to remove all of the oil soaked debris, remove the oily soil from the west and south sidewalls, suck up all of the oily water and then break up the concrete slab (which Mr. Knoop said was below the debris, but which I couldn't see). I told him to take clean soil end point samples for the sidewalls and to take final water samples and to send the results to the Spills Unit. He said he will do this.

03/16/06 Sharif Rahman– I called Stewart Kanoop,(212)479–5461 of Langan Eng.He indicated that they have removed all the oil contaminated soil from the site and dug out approx. 70 ft below the grade to bedrock.There are couple of voc/svoc exceedances.GW samples have been taken.He will forward the report to DEC.

08/16/06 Rahman–Closure report prep'd by LANGAN Engineering is available.Approx. 10,000 cubic yards of fill material and native soil were excavated down to bedrock.In total, 33939 gallons of groundwater were removed from the site and transported to a disposal facility.The excavation extended to the property boundaries of the site, and continued into bedrock to a final depth of 70 ftbgs.All potential on–site source material for VOC and SVOC impacts to groundwater has been excavated and transported off–site.Post remediation soil sample results showed VOCs below RSCOs level.Six SVOCs showed slight exceedances which could be attributed to fill material.In the post remediation ground water samples– two VOCs(Naphthalene 323 ug/l and Ethylbenzene 15.2 ug/l) exceeded their respective limit slightly.Considering the structural impediments,bedrocks and nature of residual(minor) contaminants in ground water, this spill case is recommended for closure.

**Caller Remarks:**

Broke a thermometer last night and attempted to clean it up. Still have some remnants on the surface of table. She states she also cut her finger on the glass and may have gotten mercury in her cut.

Wants to talk to the REP

**DEC Investigator Remarks:**

DEC Piper spoke w/ Beth (caller) about cleanup. Caller stated mercury from thermometer was smeared into comforter and dresser after trying to properly clean. Piper contacted DEC Austin for advice on spill. Austin stated procedure which is what caller did. Piper spoke w/ caller about cleaning and that was done already though there are smears. Piper contacted FDNY Hazmat for advice. Hazmat stated that they have the capabilities to remove the mercury and caller should contact 911 directly due to SOP. Piper contacted caller and stated FDNY Hazmat instructions. Piper followed up with caller in pm. Caller stated 4 firetrucks, hazmat team and two ambulances showed up and shut down the road. Hazmat bagged comforter and rug and cleaned dresser. Bags were left at her residence. Caller taken to emergency room where while waiting DEP Dan Walsh tracked her down and issued commissioners order to remove haz materials and gave # of 3 contractors. Doctors made comments why she was here due to small quantity of exposure. Disposal estimates ~\$2K. Piper stated to caller he will talk with supervisor on Mon am.

0900aPiper updated DEC Austin. Piper contacted DEP Dan Walsh. Dan issued notice due to haz. material and stated DEP hazmat should have been notified. This amount is a unregulated quantity. Walsh to speak with supervisor regarding disposal requirements.

1030–Dan walsh returned phone call and stated that the material is considered Hazardous and must be disposed of by a contractor and the Order is still in effect. Piper contacted Sanitation which said they will have supervisor call back.

1245 Piper recieved call from caller, stated she has contacted the Mayors office and would like me to contact Ms. Amy Miller. I was in field and would call upon additional info and return to office.

1345 Piper contacted Lt. Flynn at Sanitation. Lt stated if it is broken, then it must be cleaned and disposed of by a profesional. Sanitation does not take broken thermometers.

Piperspoke w/ Mayors office Amy Miller. AS per conversation amy stated that caller was forced into ambulance. This is new to piper. Piper explained to Amy that DEC refers mercury spills to DEP and FDNY Hazmat. This issue is being dealt with by the city and owner of thermometer to dispose of properly. This case is closed.

CON ED E2MIS REPORT 11-01-00

Mechanic 'A' working for Transmission Operations Department was performing mouse and mandrel operation. Mouse and mandrel were pushed from MH#426 to #427- Feeder 36252, with pressure behind it from compresses air traile. When mouse and mandrel exited inot MH#427 approx. 8 glas. of oil came behind it. The oil is contained with MH#427.

Chem lab took samples on 11-01-00

Lab Seq# 00-10448 &lt;1.00ppm PCB

On 11-02-00 Clean Harbors removed 1000gals. of oil and water from Manhole under manifest.

## Containment/Clenaup Activities

Sealed leak

Removed/recovered liquid/solids

Washed stained areas.

**Caller Remarks:**

CALLER REPORTING A SPILL OF MATERIAL POSSIBLY FROM A TRANSFORMER CONED#133282 SAMPLES TAKEN CLEAN UP WILL BE PENDING RESULTS  
 NO CALLBACK NECESSARY

---

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"

e2mis no. 133283:

3 gallons possible transformer oil mixed with approx. 20 gallons water in vault V9139. There are 2 adjacent vaults V9550 – Feeder 31M56 and V9618 – Feeder 31M08 with approx. the same amount of oil and water in each vault. There is a weep hole in vault V9139 which caused the oil & water to migrate to the other 2 vaults. There is a possible bottom leak in the transformer in vault V9139 which is the possible source of the oil.

There is NO sump in vault 9139. There are 2 sump pumps in the adjacent vaults but they were not working. There is a sewer connection. There is no evidence of release to sewer or waterway. No initial cleanup action was taken other than to unplug the pumps. Cleanup is pending lab analysis results and crews.

LSN 00-0865

V9550 --- Aroclor 1254 PCB 24 ppm

V9139 --- Aroclor 1254 PCB 04 ppm

V9618 --- Aroclor 120 PCB 22 ppm

9/26/00 Transformer was removed at :00 hours, and clean up began. Tanker from Astoria removed 1500 gallons of water, and oil from all three structures. V 9139 was cleaned first so the new transformer could be dropped. This structure was cleaned, and double washed with BG-Clean 402, and washed down with water from the flush truck. At 16:45 the clean up on V 9139 was complete, the weep holes were plugged. At 17:30 the clean up on V 9550, and V 9618 was started. Both structure were cleaned with the same

soulution, and washed down with water from the flush truck. Clean up on these two stuctures were completed at 20:30 hours.

## Caller Remarks:

CLEANUP PENDING – NO SMOKE FIRE ETC – SPILL ON 400 GALLONS WATER

CON ED #145523

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ"  
E2MIS NOTES 145543

On 10/10 @ 09:40 Bonaparte # 24219 I&A reported to me that while working in V-8984 for Feeder 31 M 56 he discovered app 3 gal of unknown oil and 400 gal of water. He was working on "460" routine inspections. He suspects that the oil is cable oil from the Transfromer unit due to heavy corrosion. The unit is condemned and pending removal.

No sewer/waterway affected, no injuries, no weather contributed, no private property affected, no fire or smoke involved. There is no movement on the standing water. no sumps and no substantial cracks in the structure. The Enbvironmental tag # 31522 was hung. Two samples will be taken for PCB & ID with Chain of

Custody # AA 22347. Cleanup pend Transfromer removal.

1/20/04

Sample results – 34 ppm PCBs. Cleanup completed 1/23/03. Transformer removed and replaced on 1/23/03.

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"  
E2MIS 120225

Logger: Louis Cook (15851)

Date 10/1/98

Description: On 10/1/98 JGennaro (78567) Senior Elec. Tech and I. Martinez (54385) Sr. Elec. Tech. found 6 gallons of oil on top 3000 gallons of water contained inside mh 59969 for feeder D38M06. This mh was previously tagged with a date of 9/5/97. Cathodic protection testing was performed. No oil entered the sewers or waterways. REFERRED TO S&TO THROUGH EMAIL NOTIFICATION"

Dept/Facility

SMALL OIL SPILL Con Edison Incident No. 120225\_\_\_\_\_

CLEANUP CHECKLIST NYSDEC Spill No. 98-08108\_\_\_\_\_

Name of person completing checklist: J ALBERTELLI, SUPERVISOR, 08810

Con Edison Operating Department responsible for spill cleanup: TRANS OPS

(1) A small oil spill is a spill of oil containing less than 50 ppm PCBs that does not meet the criteria for a de minimis spill and satisfies either of the following

conditions:

? It is totally contained in an impervious structure, such as a manhole, vault, or moat, or

? It meets all of the following criteria:

- No sewer or waterway is affected, and
- No private property is affected, and
- No personal injuries are involved, and
- Cleanup is completed within 72 hours of the spill discovery, and
- Less than 50 gallons of oil, petroleum product of any kind, or dielectric fluid is spilled.

(2) Material spilled/discovered:

0 Oil (type); PCB concentration: less than 50 ppm; known / unknown.

☐ Dielectric fluid; PCB concentration: less than 50 ppm; known / unknown.

If unknown PCB concentration, was sample collected? ☐ Yes ☐ No

(3) Sample submitted for analysis? ☐ Yes Sample ID No. ☐ No

For what parameters? ☐ PCB ☐ Benzene ☐ Other Parameters

Copy of chain of custody form attached? ☐ Yes ☐ No

(4) Amount spilled/discovered: If leak/spill is continuing, rate

(5) When was spill discovered? Date Time

(6) Location of spill. (Be as precise as possible. Include cross streets, manhole numbers, equipment box numbers, etc., as appropriate.)

MH59969

☐ Sketch attached

(7) Source/cause of spill. (Be as precise as possible. Include equipment numbers, if possible.)

☐ Unknown

(8) Description of area affected by spill (include dimensions as appropriate)

(9) Containment/Cleanup Activities (per GEI 2.11, 2.13, 2.16, 3.2, or 3.3) ☐ Sketches attached.

☐ Tightened valve.

☐ Placed drip pan.

☐ Sealed leak.

☐ Blocked nearby sewers/drains with spill kits.

☒ Removed/recovered liquid/solids.

☒ Used absorbents to remove residual fluids.

☐ Removed contaminated vegetation.

☒ Removed visible traces of oil.

X Washed stained areas.

0 Excavated contaminated soil, bluestone.

0 Other

0 See attached contractor report.

(10) Identify who performed cleanup:

0 Con Edison personnel/department? D JAMES, SPLICER, 14928

0 Name of contractor CLEAN HARBORS

0 Contractor report attached.

(11) Cleanup completed on Date 10/03/98 Time\* 11:30

\*Note: If the cleanup is completed more than 72 hours after the spill was discovered, the spill is a large oil spill.

(12) Con Edison personnel directing cleanup J ALBERTELLI, 08810

4 gal. of unkn oil on 10 gallons of water in manhole. Samples taken. clean-up pending test results. No to 5 questions at this time. Con Ed Ref # 155829.

---

DEC Investigator Remarks:

e2mis no. 155829:

On 10/15 @ 04:15 R Williams of RW's discovered approx 4 gal of unknown oil and 10 gals water. The source and cause are unknown at this time. The spill is in the concrete Vault. There is a sump pump that was found not running. Environmental tag # 10327 was hung. Two samples for PCB and ID were taken.

10/15 @ 05:00

Cleanup scheduled for 07:00 HRS on 10/15/2004.

Transportation notified and faxed info for "Over 50" tanker

Vactor services notified and faxed info

EPA # NYP 004 125 688

Oct. 15, 2004

Lab Sequence Number: 04-08402-001 TOTAL PCB 15 ppm

Update 10-15-04 @ 12:58

Lab Sequence Number: 04-08406-001 Analysis indicates the presence of a substance similar to a dielectric fluid

Update: 04/01/05 @ 22:45

Partial Clean Up Completion Date: 04/01/05 Time:18:00

Details: Partial Clean Up

Solids Removed: Mud and stone

Barrels used: None

Liquids Removed: Yes How many Gallons: 260

Removed By: tanker

Drums: None

Vactor Truck: Yes

Method Used to Clean : Was washed twice and power washed using flush truck.

04-02-05 16:45

Final clean-up is completed @ 16:30. 25 gals. of water was removed. No solids. Unit was double-washed w/slix. vactor and tanker was on location. Environmental tag was removed #10327. See clean-up crew on people involved screen. Source of spill transformer. Transformer was removed and installed.

10 GALS UNK OIL ON 100 GALS OF WATER - SAMPLE TAKEN CLEAN UP PENDING RESULTS CON ED 143702

#### DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ"  
 E2MIS NOTES 143702

Entered by Alice F. Williams, Employee # 75829, Transmission Operations Department. July 2, 2002 at 09:30 Hrs.: John Marsh,

Employee # 52092, Splicer working for Transmission Operations Department, was inspecting pipes for corrosion in

Manhole 59969, Feeder 38M35, when he discovered that the manhole contained approximately 10 gallons of oil on top of approximately 100 gallons of water. The spill is contained in the manhole. There are no injuries or outside impact, and there is no active fire or smoke. No sewers, waterways or private property are

affected. Chem Lab will be sent out to collect and test samples of the substance; cleanup is not expected totake place within 24 hours. The cause of the spill is presently unknown. Supervisor Fred Acosta of Transmission Operations Department was notified of the incident.

**Caller Remarks:**

DISTRIBUTION FEED LEAK 1 PINT ONTO ROADWAY. MOSTLY CLEANED UP. CON ED#133186

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"  
 e2mis 133186

09/04/00 09:30 Queens Overhead Supervisor Matt Glasser reports distribution feeder between Manhattan and Roosevelt Island leaked approximately 1 pint of dielectric fluid on the east bound roadway (bicycle lane) of the Queensboro Bridge. The spill was 1 Oz. on the concrete and remainder to pads that were placed to catch drip. The drip rate was 1 drop per 2 minutes. The feeder is now wrapped in absorbant pads and a plastic bag.

Matt Glasser #85158 reported on 5/6/04 that he remembers this incident since it was very hot that day & a holiday weekend. He stated that the materials for the cleanup was supplied by Manhattan #9, but the actual cleanup was performed by Queens crews. The spot on the roadway of the Queensboro Bridge was double washed using "Simple Green" cleaning solution, brushes, absorbent granules and pads. The area of the cable that was leaking was repaired. Manhattan #9 crew installed heat shrink sleeves over the affected area and sealed the leak. The cleanup

was completed at approx. 12:00 noon on 9/4/2000.

A CONTRACTOR WAS DIGGING A HOLE AT THE BOTTOM OF THE VAULT AND THERE IS FUEL OIL COMING OUT OF THE HOLE / CON ED SPILL #147620 – OIL BEING TESTED AT THIS TIME

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SAWYER"  
Con Ed e2mis #147620:

On 3/21/03 at 11:35 J. Phelan # 06597 an inspector for constuction management reported that at 11:20 contractors that were working for Con-Ed reported to him a heavy odor & a sheen like oily substance in vault-6577. This structure is located at the north side of E. 60 St. 132' west of York Av. This is a new structure & is still under construction. He states that the substance smells like an oil or diesel fuel. he says that there is a hole in the bottom of the concrete structure that goes through to the soil this is where the substance is. The hole is there so that they could install a sump pump which is what they were going to do. He reports that there is 2 gallons of the oil like substance on top of 20 gallons of water. He will call chem lab to come out & take sample. The cleanup will be pending results.

8/13/03 liquid from the structrer was removed by Astoria and the hole was patched up. the liquid in the hole was non haz (lab seq. no. 03-02386).

#### Caller Remarks:

VACANT LOT WHILE REMOVING TANKS FOUND CONTAMINATED SOIL;

#### DEC Investigator Remarks:

Sangesland spoke to Michael Burke of Langan Engineering.

They were pulling tanks out of a vacant lot that once housed a car dealership. During the excavation process they found a series of gasoline USTs within a concrete vault. Vault was built directly on the bedrock. Apparently some gasoline left the vault over time and impacted the soil next to the vault.

Langan has excavated the impacted soil (now staged and ready for removal). Endpoint samples (sidewall) have been taken (no bottom sample/bedrock).

Disposal manifest/sample results/closure report will be sent to DEC.

\*\*\*\*\* Related Spill\*\*\*\*\* # 0606975 \*\*\*\*\*

This second spill number relates to a different location on the same property.

There is evidence of a hydraulic oil spill from the former hydraulic lifts. Once again the site is being excavated and endpoint samples will be taken. Results for this spill will also be included in the closure report being prepared for this site.

10/05/06–Vought–Received call and spoke to Burke (Langan). Burke will be preparing report. One endpoint sample showed SVOC's by hydraulic area. VOC's were non–detect for gasoline area. No dispenser island or remote fills. All piping was removed site.

Site will be high–rise and excavation will occur for development. Tanks were never registered and PBS registration was sent in.

Six test pits were performed. 80 yards of soil were removed. Vought inquired about extent of excavation for new building (whether excavation would include locations of possible dispenser islands and/or remote fills). Burke will return call to DEC.

10/11/06–Vought–Spoke to Burke after he left numerous messages for DEC and endpoint samples were clean for VOCs and SVOCs.

Contaminated soil was discovered in southern of site (not known before), however no USTs were found. Clean endpoints from hydraulic location. Excavation was dug to south and west and gasoline and may be entering from westside of site. Whole site will be excavated to bedrock.

11/7/06–Vought–Site visit by Vought on 10/13/06 with Langan Burke and George Rukaj (Solow Management Corporation 212–829–0600). Air monitoring in progress with PID and vapor suppression being achieved via use of EcoSorb misting due to odor complaints from adjacent building. Note that owners of adjacent building are also owners of this construction site (Solow Management). Site formerly contained eight (550–gallon) gasoline USTs, one (550–gallon) waste oil, one (1000–gallon) fuel oil, five hydraulic tanks. Two additional USTs were found at time of site visit. Site was formerly a parking garage. Discovered tanks will be removed and pumped dry. MTA ventilation shaft immediately adjacent to contaminated soil undersidewalk so delineation to the south is not possible. Site will be excavated to bedrock for construction of residential building. DEC requires: 1) collection of soil sidewall samples and one bottom groundwater sample. Approximately 20 endpoint soil samples were collected. Also received a copy of the following:

UST Closure Report (Langan Burke)–9/1/06. "We are pleased to present this workplan for the decommissioning and closure of underground storage tanks (USTs) and remediation of petroleum impacted soil...". "Proposed improvements at the Site include construction of residential building by Solow Realty and Development Company, LLC". Heavy petroleum odor was detected by Langan in southwestern and northeastern portions of site. "The source of impacted soil in the southwestern portion of the Site was identified to be five 25–gallon USTs used to store hydraulic fluid near the western property line. The source of petroleum impacted soil at the northeast corner was one 550–gallon fuel oil, one 1,500–gallon fuel oil, and eight 550–gallon gasoline USTs. "It is our understanding that the proposed construction scheme has a multi–level below grade parking structure up to about 30 ft below existing grade..." A health club and pool will also be present in the below grade site. Work plan includes removal of USTs and "remediation of UST–related impacts to the soil and vicinity...", collection of endpoint samples, excavation of contaminated soil to bedrock, "Langan will undertake necessary soil sampling to fully delineate the areas of petroleum contamination". Work will be limited adjacent to MTA structures to avoid structural damage. Sample collection and analysis procedures also included in report. DEC requires: 1) collection of soil endpoint samples and one bottom groundwater sample via installation of bedrock well 2) installation of vapor barrier and possibly SSDS 3) PBS registration.

11/08/06–Vought–Called (Langan) for update prior to sending out letter and spoke to Burke. Contamination (stained soil) thinned out to the east but undermined area where clean bottom samples were collected. As such project is on hold until contractor decides whether to remove additional contaminated soil. Once soil is removed down to bedrock than a well will be installed into bedrock. PBS registration was sent in and a vapor barrier will be part of foundation plan.

11/15/06–Vought–Sent letter with DEC requirements: 1) endpoint samples including one soil sidewalls and bottom groundwater sample 2) installation of vapor barrier 3) submission of PBS registration 4) delineation of soil and groundwater contamination (if applicable). Vought sent letter with cc to Langan to:

George Rukaj  
Solow Management Corporation  
One Sutton Place North  
420 East 61st Street  
New York, NY 10021  
Phone: (212)829–0600  
Fax: (212)829–0165

12/15/06–Vought–Received email from Langan (Burke) to resend letter to following address:

Mr. Robert Mawhirt  
Solow Realty and Development Company, LLC  
9 West 57th Street  
New York, NY 10019

Vought sent letter and faxed copy to Burke.

03/21/07–Vought–Review of Draft Spill Closure Work Plan (Langan–Burke–212–479–5400)–3/12/07. Removal of nine (550–gallon) gasoline USTs, two (550–gallon) waste oil USTs, one (1000–gallon) No. 4 fuel oil UST and five 25–gallon hydraulic fluid USTs. "Petroleum impacted soil covering the southern portion of the site was excavated to the top of bedrock". A total of 3938 tons of soil was removed from the site. Groundwater was not encountered at the site. Bottom endpoint samples not collected because excavation extended to the top of bedrock". "The excavation area was backfilled both with uncontaminated soil from the site and imported recycled concrete aggregate". Proposal includes excavation of remaining contaminated soil from the site (roughly 1500 cubic yards), implementation of odor and dust suppression techniques, implementation of a CAMP and collection of endpoint samples, collection of one bedrock groundwater sample from the area of highest contamination and installation of one bedrock monitoring well "more than 30 feet north of the southern property line at 60th Street so as not to interfere with the TA subway structures" in the area of highest soil contamination. Langan will prepare a spill closure report including site plan, summary of cleanup activities, endpoint sample analyticals, vapor barrier design. "After the vapor barrier is installed a supplemental report will be submitted to the NYSDEC to document the barrier's proper installation within the new structure". Called Burke and one additional well will be installed in northeast corner in overburden. Drilling expected to begin tomorrow as consultant is eager to begin construction.

DEC requires: 1)documentation of parking structure HVAC as alternative to SSDS.

Vought sent out letter approving plan pending inclusion of above requirement.

4/4/07–Vought–Received message from Burke and returned call and left message to return call.  
Vought received call and spoke to Burke and well was installed as per workplan and five feet of soil on top of rock with groundwater and cleanwater. Additional well will be installed downgradient. Upon remediation three wells will be installed, one bedrock and two overburden. Contractor being selected for further excavation and excavation tentatively scheduled for early May.

05/16/07–Vought–Received word from DEC Chawla that Langan submitted BCP application and he is currently reviewing it. Preliminary review of data by Chawla shows that site may not be eligible. He will refer application to DEC Albany for review.

06/01/07–Vought–Received call from DEC Deborah Maloney inquiring as to current BCP manager. Current BCP project manager is Chris Milack.

06/21/07–Vought–Received call from and spoke with Langan (Burke) and site is under BCP application and is being reviewed by Milack. Burke proposed installation of one groundwater monitoring well. Portion of site not eligible for BCP and may be eligible depending on groundwater investigation results. Boring will be installed in south portion of site where excavation has occurred to bedrock. Quick status summary will be submitted by 7/2/07.

06/28/07–Vought–Received email on 6/15 from DEC Cozzy inquiring as the following: 1) Is soil excavation ongoing? 2) Is the spill cleanup on hold pending the BCP eligibility? 3) Are you still pushing them to do the cleanup and does it have a schedule? 4) Is the building construction continuing or is it being held up due to the contamination? Vought sent email response.

08/03/07–Vought–Received call from and spoke to Burke and wells were sampled and groundwater has low level VOCs and DEC will receive summary letter in a couple of days). DEP is reviewing data due to CEQR and may also require vapor barrier. Final spill closure plan will be submitted to DEC and remediation (additional soil excavation in north portion of site scheduled to begin by September.

08/09/07–Vought–Received call from Murry Winter (NYCDEP 718–595–4514 fax 718–595–4479). As per Winter, DEP asked for Phase II sampling. Langan denied Phase II sampling as they will be performing soil excavation. They submitted spill closure request to DEP. Current plan increases scope of work for excavation. DEP wishes to defer to DEC and Vought approved deferral of issue to DEC.

08/22/07–Vought–Received call from and spoke to Burke who requested DEC approval of amended RAP submitted to DEC. Site will be developed with either five story doctors office with underground garage or 37 story mixed use residential building with below grade parking garage. Swimming pool and health club will also be present in basement of building. Work plan calls for excavation of petroleum contaminated soil to bedrock which is 5 to 27 feet below grade. Contaminated soil will be covered with plastic if stockpiled to prevent odors to surrounding neighborhood. CAMP will be implemented including odor and dust suppression techniques. Sidewall samples will be collected however no bottom samples will be collected due to excavation to bedrock. Plan calls for installation of two monitoring wells (one shallow well near the northeast corner of the site and bedrock well will be installed 30' north of the southern property line at 60th Street. Plan also calls for installation of a vapor barrier and submission of a Spill Closure Report. Vought sent approval letter for plan with cc to NYCDEP.

09/26/07–Vought–Received call from and spoke to Burke. Groundwater samples were collected and were below TOGs 1.1. Two rounds of samples collected from three wells, all below TOGs. Burke will submit letter request to decommission wells. Samples were collected on 7/11 and 9/4. Burke will send in groundwater analyticals for DEC review.

10/4/07–Vought–Received call from and spoke to Burke and approved decommissioning of onsite monitoring wells due to all below TOGs and construction will occur over well locations.

1/24/08–Vought–Received call from Burke and excavation beginning and contaminated soil noted, CAMP stations set up and all is good so far. Excavation to bedrock.

04/18/08–Vought–Received call from and spoke to Burke and free product noted and fingerprint sample collected. Contamination is below UST vaults and source may be offsite. Free product in southwest corner of site. New building will be connected to building next door and areas between building will be excavated to bedrock. CAMP data showed that contractor ran out of odor suppressant and had exceedance for 48 minutes but no complaints received to date. Free product above water table and will be removed with associated soil.

05/19/08–Vought–Received call from and spoke to Burke and soil contamination noted heaviest to the adjacent property to the west. Connecting tunnel will be installed between both buildings and he is looking to complete soil excavation within the next couple of weeks. Vought will review Rap for 1113 York and close if appropriate spill and new spill will be opened on source property to

the west.

07/17/08–Vought–Received email from Burke on 7/15/08 that proposed collection of groundwater sample from northwest corner of property. No collection from onsite monitoring well as entire site is excavated to bedrock and will be replaced with building foundation. DEC requires: 1) installation of waterproof membrane 2) confirmation that no soil remains onsite 3) new spill opened to west property. Vought spoke to Burke and first floor will be ventilated garage and waterproofing membrane will be installed. Entire site excavated to bedrock except for northeast corner. Both properties are on same lot and excavation on western portion will begin next week and a report will be submitted within approximately one month and contaminated soil still remains on western portion of lot and depth to bedrock is 2–3'. Waterproofing membrane report will be submitted under separate cover. Vought sent email to Burke approving of collection of groundwater sample from northwest portion of site. Vought reviewed:

Post Remediation Groundwater Sampling Results (Langan–Burke) dated 10/1/07 and received on 10/2/07. Groundwater sample collection from three bedrock monitoring wells. Endpoint soil samples collected from sidewalls and not bottom due to presence of bedrock. Monitoring wells were installed 2.5–5' into bedrock. Groundwater analyticals show: 11.6ppb 1,2,4–trimethylbenzene(MW1), 6.2ppb 1,3,5–trimethylbenzene(MW1), 7.1ppb ethylbenzene(MW1), 10.2ppb xylene(MW1), 5ppb isopropylbenzene(MW1), 5.2ppb sec–butylbenzene(MW1). Report concludes "source removal is complete and DO concentrations are favorable for natural attenuation, therefore, residual levels of VOC contamination will attenuate over time". Spill closure report will be submitted to DEC upon completion of site remediation. Wells will be decommissioned as per DEC guidance.

07/18/08–Vought–DEC requires: 1) Results of excavation of western portion 2) Waterproofing membrane report submission.

10/31/08–Vought–Received email from DEC Cozzy that developer previously applied to BCP in 2007 and General Counsel requiring status of site. Vought called DEC Burke for status of construction on the site and developer stopped paying contractors and contractors just received payment. Few days of excavation left for ramp. 75% of foundation poured. Remediation of some petroleum contaminated soil mixed in with ramp will occur when ramp is excavated and rest of site (entire site) will be excavated to bedrock including ramp location. Developer hired waterproofing consultant and description will be put in final report to be submitted to DEC. Only work that remains is excavation of ramp to bedrock and submission of report to DEC including description of waterproofing membrane and excavation of entire site including ramp area to bedrock. Vought sent email reply to DEC Cozzy with copy of UIS notes.

8/6/10 – Raphael Ketani. I received the case from Jeff Vought who transferred to Unit A of Region 2 DER.

I spoke to Michael Burke (212) 479–5400 of Langan. He said that everything has been dug out and that the closure report is ready. He said that it covers the excavation results for the western portion of the site and describes the waterproofing membrane report. Mr. Burke said that DEC will receive it soon.

11/22/10 – Raphael Ketani. I tried to contact Mr. Burke regarding receipt of the closure report, but I could only leave a message.

11/23/10 – Raphael Ketani. I spoke to Mr. Burke. He said that they excavated to bedrock and cleaned the top of the bedrock. No contamination was seen. The owner is not going to build his apartment building yet, but will build a parking garage soon, instead. He said that the closure report has been written. He just has to proof read it. He said that he will get it to me by December 10.

12/14/10 – Raphael Ketani. I spoke to Mr. Burke. He said that the report was completed a year ago, but was not submitted because

Langan was owed a lot of money. The money has been paid. However, Mr. Burke stated that he hasn't been in communication with his client. The client gave the report to his lawyer for review. Mr. Burke stated that he will contact his client today and see where the review stands. I told him to get the report to the DEC as soon as possible.

2/7/11 – Raphael Ketani. I received the closure report dated February 4, 2011 from Langan Engineering for the property at 1113 York Avenue (aka 420 East 61st Street). I reviewed the closure report. Some PAH analytes were discovered in the soil, but they have concentrations that are characteristic of historical fill and not oil contamination. The groundwater results showed that there was minimal contamination. The data in the report suggested that all of the gross contamination had been removed.

Judging from the data in the closure report, I have determined that there is no threat to the public or the environment. Therefore, I am closing the spill case.

#### Caller Remarks:

ref # 143144 samples taken clean up pending. poss from the spill at teh east 63rd st sub station cr 0202268.

#### DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
 Con Ed em2is #143144:

Jimmy Wilson #63304, Operating Supervisor, reported at 12:34 hrs. that he found at 12:00 hrs. approx. 10 gallons of unknown oil and approx. 100 gal water in manhole M12101 located in front of 320 East 64th Street between 1st & 2nd Avenue. This manhole is located on E 64th St. in front of the driveway of the entrance to the East 63rd Street Substation. Mr. Wilson and an underground crew responded to a request by the Manhattan Environmental Desk to inspect the manhole due to spill from the East 63rd Street Substation. The possible source and cause of the spill is from an incident at East 63rd St. S/S. See Incident #143131 – Worksite is E 63rd Street Substation. Briefly the deluge system activated in transformer vault #5 flooding the moat around the transformer. The moat had oil in it. When the moat overflowed, oil and water spilled through the transformer louvers and down the station driveway into the street. The unknown oil & water is from this spill or possibly from another source. No private affected due to the spill discovered in the manhole. The oil was found on top of the water in the concrete manhole. There was no fire or smoke involved. There was release to the sewer from the substation spill but there is no evidence of release to sewer or waterway from the spill discovered in the manhole. There was no injuries related to the spill and no weather conditions contributed to the hazards of the spill. There is primary & secondary cables in the manhole. There is standing water but no visual movement. There is no sump pump and no substantial cracks. A sewer connection & concrete sump cannot be verified at this time. Spill tag #S00852 was installed. Samples will be taken from the spill for PCB and Oil ID by the Chem Lab. No initial cleanup action taken. Cleanup is pending test results and vendor.

fire dept on scene – it appears unk cleaning products are in sewer and giving off a chemical odor –

callback at 22:32 ferroclean is the product – pumped through the

hvac system –approx 60 gal has leaked from system in to sewer

pete cachia – nyc dept. of emerg. managment –building is being voluntary evacuated from 12 floor down – 718-422-8700

#### DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "KRIMGOLD"

11/23/03. 23:00. J.Krimgold @ site. FDNY, OEM and DEP responded to the spill. About 500 gal of "Ferroclean" (a cleaning chemical commonly used to remove rust from HVAC system) was pumped into the buildings HVAC system this afternoon. Apparently one of the utility pipes let go in the area of 12th floor and ~200 gal of liquid escaped the system between walls and find its way to apartments. According to MSDS this chemical consists of 90% of a weak organic acid and organic salts. Fumes could irritate eyes and throat. However, its not considered life threatening in concentrations presented in "Ferroclean". However, some tenants voluntarily vacated apartments and were placed in provided by Red Cross buses. Building management took responsibility and dispatched a crew of their janitors and maintenance people, equipped with appropriate protective gear, to perform initial containment and cleanup. At 00:30 fumes throughout building gradually diminished since initial release and FDNY allowed tenants return to their apartments. NYC DEP Haz-Mat Unit collected samples and will follow up the next day with final recommendation.

10/20/08 – See eDocs for Con Ed report detailing cleanup and closure.

210949. see eDocs

Selvin Southwell concerned that mercury may be discharged through oil/water separator.

EPA Method 245.7 is new method for trace mercury, with detection limit of 5 ng/L. Breen.

5/2/08: Spoke with Con Ed Remediation Group Section Manager (Barry Cohen). He told me that cleanup of this incident was scheduled for this weekend. I told him that this was the first time i was hearing about this incident, and I requested that he prepare a summary of the facts of the incident, along with a proposal for remediation.

Later in the day on 5/2, Con Ed (B. Cohen) sent e-mail:

"As you requested during our meeting this morning, I am providing you with summary information concerning (1) the mercury spill that Con Edison reported to the DEC on April 19, 2008, (2) actions Con Edison has taken to address this spill, (3) Con Edison's plans to perform additional cleanup this weekend, (4) Con Edison's proposed soil cleanup objectives (SCOs), and (5) Con Edison's post-excavation soil sampling plan to confirm that those are achieved. Please review this information, consult with other DEC staff as needed, and inform me as soon as possible whether the DEC agrees with our proposed SCOs. If the DEC disagrees with our proposed SCOs, please inform me as soon as possible of the SCOs that the DEC believes are appropriate. We would appreciate a response to the SCO issue ASAP, since we will be performing additional cleanup and taking post-excavation samples this weekend. Thanks in advance for your prompt attention to this matter. We appreciate that you will bring this to the right people at the DEC for a decision, even though this spill was not assigned to you and, until today, you were not aware of it.

"1. Mercury Spill (DEC Spill No. 0800802)

As part of Con Edison's floor trench investigation at its generating stations, the Company took water and sediment samples in late March for waste characterization purposes at the Company's E. 60th Street Steam Generating plant, which is located at 514 East 60th Street, between E. 59th St. on the south, E. 60th St. on the north, York Avenue on the west, and the FDR Drive on the

east. The East River is located directly east of the FDR Drive. The sample results indicated the presence of mercury in the trench sediment. Based on those results, the Company took water samples at various locations in the trench, at the oil/water separator used to treat floor drainage, and at SPDES Outfall 001. Mercury was found in various water samples. Based on these findings, Con Edison submitted a "Report of Noncompliance Event" to the DEC on April 21. That report, a copy of which is attached, provides additional details of these initial findings.

> [NOTE – See eDocs]

"On April 19, after power washing of the trenches was completed, Con Edison performed a trench system inspection, which consisted of visual observations and the use of a direct reading instrument for mercury in air. The inspection revealed the presence of a small number of mercury beads in the west trench. After additional water was removed from the trenches, more mercury beads were discovered. During cleanup using a HEPA vacuum, additional mercury beads appeared from under the concrete skin coat in the trench bottom. This skim coat was partially removed to facilitate further cleanup of the free mercury. Cleanup continued, and it was estimated that as of April 19 an estimated three pounds of mercury have been removed. Based on the findings of mercury, Con Edison notified the DEC, the NYCDEP and the National response Center. The DEC assigned number 0800802 to this spill.

"The specific cause of the mercury contamination is unknown at this time. Con Edison conducted a review of past and present mercury containing equipment at the Station to determine possible sources of the mercury contamination found in the trench system. We identified mercury containing switches, thermometers, flow recorders and transmitters, and manometers, which were installed at the Station in the 1970s. Much of this equipment has been removed. Although it is difficult to determine the exact source of the mercury contamination, we believe the sources were probably the flow devices and manometers. However, there is no way to confirm that suspicion.

"A figure showing the Station and floor trench layout, mercury vapor and sediment (referred to as "sludge" in the figure) sample locations and mercury vapor and sediment results, and mercury equipment locations is attached. Note that north is toward the bottom of the figure and the East River is to the left of this figure.

> [NOTE – See eDocs]

#### "2. Additional Actions Con Edison Has taken to Address the Mercury Spill

After the spill was reported on April 19, cleanup activities continued until April 22, at which time it was determined that the boiler neutralization system piping had to be removed in order to effectively uncover trapped mercury. On April 26, the piping and the remaining thin concrete skim coat were removed from the trenches, after which cleanup continued. To date, an estimated 3.5 pounds of mercury have been recovered.

"After this phase of the cleanup was completed, contact readings with a Jerome Analyzer (an instrument that provided direct readings of mercury in air) still indicated the presence of mercury in the east–west trench and the trench behind the waste neutralization tank. See the attachment in Section 1 above for vapor and sediment sample locations and results.

#### "3. Con Edison's Plans to Perform Additional Cleanup this Weekend

Cleanup activities will resume this weekend. This cleanup will consist of chipping away the impacted concrete–lined trenches and removing underlying impacted soil beneath the trenches for subsequent off–site disposal at a properly licensed commercial facility. Visual observation and Jerome Analyzer readings will be used to guide the extent of cleanup prior to taking post–excavation confirmatory soil

samples. A schematic of the trench system is attached. In this schematic, the heavy gray line shows the impacted trench areas. Note that the primary affected trench area (~40 ft. long) runs in an east–west direction and that north is toward the left side of this figure. Although the title of the figure refers to trench system sample locations, such sample locations have been removed from the figure for clarity; sample locations are shown in the second figure attached in Section 1 above.

> [NOTE – See eDocs]

"4. Con Edison's Proposed Soil Cleanup Objectives (SCOs)

Con Edison has identified mercury, cadmium and PCBs as potential substances/chemicals of concern for this cleanup, due to the obvious presence of mercury, the presence of cadmium in a TCLP result (much lower than the hazardous waste threshold) for one of the trench sediment samples, and the presence of low levels (0.1 ppb) of water in two trench water samples. We propose the following soil cleanup objectives for these substances/chemicals:

a. Mercury – 5.7 ppm. Basis: Industrial use SCO specified in 6 NYCRR Part 375–6.8(b).

b. Cadmium – 60 ppm. Basis: Industrial use SCO specified in 6 NYCRR Part 375–6.8(b).

c. PCBs – 25 ppm. Basis: Industrial use SCO specified in 6 NYCRR Part 375–6.8(b), which is consistent with the USEPA SCO for low occupancy areas specified in 40 CFR 761.61(a)(4)(i)(B).

"In the unlikely event petroleum contamination is observed by visual/olfactory means, that finding would be reported, post–excavation sampling would be performed for chemicals identified in the table of fuel oil constituents included with the DEC's 12/20/00

"Determination of Soil Cleanup Levels" memorandum that consolidated TAGM 4046 and STARS #1 guidance documents, and the results compared to the industrial use SCOs specified in 6 NYCRR Part 375–6.8(b).

"5. Con Edison's Post–Excav

4/25/12 – see edocs for file information; spill closed effective today (JOC)

5/17/12 – modified language in regional use field; changed 17–1743 radio to no (it was 'notification made' which was not the case; this did not meet 17–1743 requirement for storage in bulk, and no such notification had been made). (JOC)

#### DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ"  
 E2MIS 149873

8/19 @ 20:07

This incident is being input at this time due to a computer outage due to a VIRUS affecting all systems.

At 18:15 F Simms # 66618 of Emergency reported to me that he discovered @ 18:05 approx 6 gallons of an unknown oil in SB–13323. There was no water in the structure. He was there for an Area–outage condition.

No sewer/waterways affected, no injuries, weather did not contribute, No private property was affected. The source and the cause are unknown. There is no sewer connection, no sumps and no substantail cracks observed.

Environmental tag # 18730 was hung. Three samples will be taken for PCB and ID and Flash point. The Chain of custody # CC 16387 will be used. Courier was called by Pagano @ 18:50 for sample pick–up. No cleanup action will be taken at this time due to Secondary burn–outs in the structure.

This incident does not meet the requistes of a 24-hour clean-up and will need to have the burn-out condition cleared before work can commence.

CIG was notified and spoke to P DiDonato # 01669 @ 18:29.

 Caller Remarks:

caller is the building manager of above address – he was receiving

complaints of an oil odor – his building cks ok – he went into the building next to his and can smell the same odor in the

adjoining building and believes it is coming from there – the superintendant of the effected building is gus 212 734–9636

---

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "SANGESLAND"

3/19/2003 – JZ/DO: Odor can be detected in lobby and garage. Building manager has checked their own tank is OK. DEC Sangesland has made an appointment for investigation.

3/21/2003 Sangesland inspected the site. Apt L–D is above the building's parking garage and shares a common wall with the building at 321 East 69th St. Sangesland could not smell anything. Inspected the garage area under this apartment and did not find any problems. Gained entry to 321 East 69th street and inspected their basement/tank area and the apartment sharing the common wall to Apt L–D of 315 East 69th St. Found no problems

Spill Closed.

Caller Remarks:

1 qt oil found on dirt in vault. clean up pending. con ed 129-378

---

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"  
CON ED

E2 MIS REPORT

12/23/99

1qt. of an unknown fluid mixed with dirt on the floor of the vault. Spill contained , no water in structure, sump pump not running,sewer connection verified as per plate # 32-L-1. A PCB sample was taken

Supervisor McGeever had checked the piping in this vault and discovered an oil residue. Oil had entered the waterway but te amount was undetermined at this time. He verified that at this timethe oil had come from the transformer. An emergency tanker had been ordered and we will treat the spill as 50 to 500 ppm at this time. The area infront of the transformer has been cleaned up.A second sample of pure oil was taken from the transformer. (1) drum od debris generated pre-cleanup and to be transported to E 110 St. yard.

DEC INSPECTOR NOTES

12/23/99 4:00pm left message for Albert Gordo, DEP

Copy to DSHM

12/28/99 Spoke with Ed Rotdke- he get updated info and call me back.

12/29/99 Voice mail from Lou First (212) 338-4370

Transformer has been drained but not removed from vault yet.

capacity 265 gals.

removed 167 gals.

Max spilled 3 gals.

Initial cleanup complete. Aaiting unit removal to do final.

12/29/99 Spoke with Lou First. Requested he fax updated E2MIS when final cleanup is done.

**Caller Remarks:**

20000 GALLON FUEL TANK IN THE BASEMENT AND THERE IS A FILM OF OIL ON TOP OF THE WATER. NEITHER ARE SUPPOSED TO BE ON THE FLOOR OF THE ROOM BUT THEY HAVE NO IDEA WHERE THE OIL CAME FROM. THEY THINK IT MIGHT BE A LEAK IN THE TANK. THERE IS A TRUCK ON THE WAY FROM PETROLIUM TANK TO ASSESS THE SITUATION.

---

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "TIPPLE"  
12/16/2003 Tipple made a site visit.

3/11/2004 Sangesland spoke to Mark at PTC. He said the tank and floor under the tank were cleaned. The "tank system" was tested and failed. PTC sent the owner a proposal to do a "Tank Only" test and a "Lines" test. The owner approved this work on 3/8/04. The tank is 20,000 gal and it's almost full. PTC told the owner to burn the tank level down over the next couple of weeks and he will test the tank around 3/20/2004.

Owner is running the building on Natural Gas.

7/13/04 Tipple spoke with Mark at PTC,

11/29/05 – L. Alden – Spoke with Mark Salamack, Petroleum Tank Cleaners (917–559–5519). He had pumped out oil and water on 12/17/03 and cleaned the top of the tank. 3/24/04 tank only test indicated that the problem was with the lines. 6/14/04 tank test was OK. Sent letter to site owner requesting documentation of cleanup.

4/14/06 – L. Alden – No reply from owner. Suggested action: attempt to contact owner again. If work done between 3/24/04 and 6/14/04 investigated possible leak in lines and removed any contaminated soil, this spill could be closed.

12/1/06 – Raphael Ketani. I called up PTC (718) 624–4842 and spoke to the receptionist. She said she remembered the site and the repair, but all of the documentation was sent to the condo corp.

I called up the ST Tropez Condominiums (212) 751–0293 and spoke to the receptionist. She said that she remembers the repair and cleanup job. She said that the new super., Jeff Syler, will get in touch with me.

12/11/06 – Raphael Ketani. Mr. Syler called me and said that he had the documents I needed and that he will send them to me. He FAXed over copies of the passing test for the tank and the fuel system, a letter from Michelle Tipple (the previous DEC case manager), a 12/23/03 letter from PTC stating what services they will provide, a copy of the bill for work performed, and a copy of the paid bill. I told Mr. Syler these were the needed documents, but that DEC also needed a copy of the manifests for any soil removed, end point sample results. He said he will get back to me.

1/11/07 – Raphael Ketani. I spoke to Mr. Syler and asked him where were my copies of the manifests and end point samples. He said that there never were any end point samples or soil removed. He said that the tank was determined to be alright and so no samples were needed there. I asked him about the vent line and the fill line. He said the fill line was the only thing replaced years ago. I told him that DEC needed the soil around the fill line to be investigated. I asked him how much of the fill line was under the sidewalk. He said 12 feet. I told him that end point samples will have to be taken along the fill line. He said that he had to arrange this through the property agent and the management company. I asked who this was. He said it was Martin Brooks at Douglas Elliman Property Management (212) 455–4722. He said he will call Mr. Brooks very soon today.

Mr. Brooks called me back. He said that he will look for documentation regarding any investigation of the area along the route of the old fill line beneath sidewalk. He said that if he doesn't find anything, then he will have end points taken. I told him that he has one month to either get me the documentation or the results of end point samples. He said he understood.

4/12/07 – Raphael Ketani. I contacted Mr. Brooks. He said his company doesn't manage the building anymore, but he did have the

documentation that DEC had requested regarding the work. He said he will FAX me the documentation today.

5/8/07 – Raphael Ketani. I tried to reach Mr. Brooks regarding the documents he was going to FAX me, but could only leave a message. I tried to reach Mr. Syler, the super, but could only leave a message.

Mr. Syler called back and asked what documentation I needed. I told him that I needed paperwork regarding the fill pipe repair and replacement and the passing tank system test. I told him I also needed to have soil borings done along the length of the fill line. He said that the fill line is now mounted on the side of the building. I told him that is fine, but DEC needs to have the soil tested where the old fill line used to be below the sidewalk. He said he will have this done.

I also told him that Mr. Brooks no longer manages the building. He said that the new manager is Keith Werny of Cooper Square Realty (212) 634–8913.

5/9/07 – Raphael Ketani. I received a FAX from Mr. Brooks containing copies of the paperwork he had on file for the site. The FAX contained the Fire Department Violation Order, a passing tank only tightness test from 3/29/04, a 12/17/03 DEC letter to the co-op board president regarding the oil release, 12/23/03, 4/1/04 and 2/27/04 letters from PTC regarding costs to clean, test and repair the tank and replace the lines. There was no documentation that soil samples had ever been taken along the length of the old fill line.

5/10/07 – Raphael Ketani. I tried to contact Mr. Werny, but could only leave a message.

Mr. Werny called me back and told me to send him an e-mail stating what has to be done. His e-mail address is keith.werny@coopersquare.com.

8/1/07 – Raphael Ketani. I tried to reach Mr. Werny, but could only leave a message and send an e-mail.

8/2/07 – Raphael Ketani. Mr. Werny called me back today and said that he is going to the condominium office to dig through the records and try to find the documentation DEC needs. He hopes to get it to DEC sometime in August. I told him that would be fine.

10/19/07 – Raphael Ketani. I spoke to Mr. Werny. I asked him why he hadn't sent me any documentation regarding the old fill line removal and soil contamination. He said that he will make this his number one priority. I told him that DEC is requiring that 3 soil borings be performed and 3 soil samples be taken along the trace of the old fill line. He said that he wanted to talk to the super. about the old fill line and then he will get back to me this monday afternoon. I told him that will be alright, but if he doesn't, then the state will send out a formal letter requesting the boring and sampling.

10/22/07 – Raphael Ketani. Mr. Syler called me back. He told me to FAX a quick note to Diana at PTC and to him that 3 borings need to be performed along the trace of the old fill line and that soil samples need to be taken. I told him I would do so.

The FAX went out today to Mr. Syler (212) 826–3080 and to Diana (718) 858–4268. I also included that any contaminated soil will have to be removed.

11/30/07 – Raphael Ketani. Today, Mr. Syler FAXed me soil analytical data from the 3 end point samples that were taken along the trace of the old fill line. The results showed that there were very low hits for total xylenes in samples #1 to #3, and some low SVOC hits for samples #3.

Based upon the old fill line trace soil sample results, the passing tank test and tank system test, and the other documents in the case file, I am closing the spill case.

CONTAINED IN MANHOLE – CASE #122644

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
e2mis no. 122-644:

On January 25, 1999, C. Carrillo, Mech A, 03309 and J. Mollahan, Splicer, 73867 was at manhole 63558, feeder 38M06 with contractor to cut the roof of the manhole, making the roof lower. A mall will be built in the area. They discovered approx 300 gallons of water and approx 4 gallons of unknown oil. All contained in manhole. Chem Lab will be called to take samples. No injuries or outside impact. No sewer or waterway affected.

## UPDATE

Per V. Schaefer, Supervisor, 78367, samples were taken yesterday, 01/25/99 approx 15:00. Waiting for results from Chem Lab this morning, 01/26/99. As soon as lab results are in, arrangement for clean up will begin.

Chem lab reports 99-00753 <1.00ppm PCBs. Clean Harbors notified to respond at 12:00 1/27/99 to clean up manhole. Chem Lab reports 99-00754 <1.0ppb benzene.

## CLEANUP CHECKLIST

X Removed/recovered liquid/solids.

X Washed stained areas.

X Name of contractor : CLEAN HARBORS

Cleanup completed on Date: 01/27/99 Time\* : 15:00

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
UPDATE 8/23/00 17:00---RESULTS CAME BACK AS 56PPM

## e2mis notes:

August 22, 2000 11:05 hours: 2 ounces of an unknown oil mixed with approximately 5 gallons of water in mh 48420. Sheen was attempted to be cleaned. There is no visible movement and the spill did not enter sewers or waterways. Conduit plate 31-I-2 shows no sump or sewer connection.

8/23/2000 17:05 hours

Arochlor 1254 PCB count 56 ppm.

8/24/2000 13:30 Oil and water removed via tanker over 50 ppm. Flush truck from environment operations used a high pressure hose to triple wash the floor and walls with Bio genesis solution. manhole was then rinsed by flush truck. 1201 gallons of oil soil mixture removed.o

E2MIS 148645

Alice F. Williams. Employee # 75829, Transmission Operations Department, reports:-

June 9, 2003 @ 07:31 Hrs.: Dane Huggins, Employee # 14205, Supervisor working for Transmission Operations Department, was in search of a leak on Feeder 38M35 when he discovered approximately 500 gallons of dielectric fluid, on top of approximately 2700 gallons of water in Manhole 60636 - Feeder 38M35. The spill is contained in the manhole. There are no injuries or outside impact. There is no active fire or smoke, and no sewers, waterways or private property are affected. Chem Lab took samples of the substance for testing, Clean Harbors is in the process of pumping out the manhole.

#### SPILL CLEANUP CHECKLIST

Incident No: 148645

Completing checklist: V. BOATRIGHT SUPERVISOR, 15989

Material discovered: PCB LESS THAN 50 PPM - KNOWN

Sample ID: 03-4779-001

Pcb: YES

Benzene: NO

Amount discovered: 500 GALLONS

Spill discovered: 06-09-03

Location of spill: M60636, YORK AVE 123' N/O 73RD ST, MANHATTAN

Cause of spill: LEAK ON JOINT, CORROSION

Affected by spill: 138KV MANHOLE

Sewer/waterway affected: NO

Boom deployed: CONTAIN IN MANHOLE

Cleanup Activities: REMOVED/RECOVERED LIQUIDS/SOLIDS, REMOVED VISIBLE TRACES OF OIL, WASHED STAINED AREAS,

Performed cleanup: CORP. TRANSPORTATION

Contractor: CLEAN HARBORS

Directing cleanup: D. HUGGINS SUPERVISOR, 06-09-03

Estimated amounts: RECOVERED OIL -500 GALLONS, RECOVERED WATER-2700 GALLONS

Shipping papers: CLEAN HARBORS, CTF1180425, 6-9-03

CLEANUP COMPLETED AND SUBMITTED TO NYSDEC FOR APPROVAL

6/9/2003

Con Edison had a release of 500 gallons into manhole #60636 located in 73rd Street and York Ave. in Manhattan. At the time of arrival, Con Edison had already removed the oil from the manhole and cleaned it.

The feeder had corrosion at the bottom. Con Edison was evaluating the removal of the coal tar wrap which has PCBs and asbestos. The feeder was put on reduced pressure to prevent further leakage. Con Edison will install a clamp when the asbestos remediation is completed.

This is not related to the 1900 gallon spill reported over the weekend. Con Edison has not located the source of that spill (0302463). ARS

**Caller Remarks:**

cleanup pending test results – discovered by a crew looking for an unrelated leak on high power cable – mh #48538, con ed #138812

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"

8/9/01: 300gal in manhole for 38M33 138kV feeder at E 73rd and York Ave. Met with S. Mahoney(ERT), DEP Chris Haas and G. Materazo (S&TO). Trying to locate feeder leak. PFT tracer gas injected. Took soil gas samples and analyzed using GC. Showed peak in intersection at E73rd and York. Con Ed started to excavate in this vicinity. G. Materazo is contact for System & Transmission Operations. (KMF)

e2mis no. 138-812:

Clean Harbors notified to respond and cleanup manhole on 8/9/01. Corp transportation tanker to pump out manhole. Manhattan Custom Service supervisor to respond and give guidance for cleanup (distribution cables are in manhole). Liquids to be treated as 50-499 since lab results have not been returned yet. Temp EPA ID # NYP004087722 received from ERT for cleanup.

8/9/01 13:32 hrs Received lab results, lab sequence # 01-08076-001 Aroclor 1260 &lt; 1.0 ppm.

Clean Harbors onsite and clean up commenced after clamp was installed on Fdr 38M33 at 18:00. [SEE SPILL # 0104864] After clamp was installed, flow of fluid into manhole stopped. Manhattan CS on location to direct cleanup since TO personnel have no experience with distribution voltage cables in manholes. Clean Harbors removed 318 gallons of oil from manhole under manifest CTF0834908. On 8/10/01 meeting held with Jane O'Connel (DEC) and John Tranchina. Manhole cleaning was good but oil may still flow in through ducts. Pads to be left in POE to trap any oil still weeping in and cleaning of ducts to discussed with Manhattan CS.

## UPDATE 9/7/01

R. Mockler, UG Planner, reported on 8/31/01 that M. Demodna #19654 inspected this manhole on 8/31/01 at 00:01 hrs. and discovered a residue of oil and 200 gallons of water still in the manhole. This manhole will have to be cleaned by Clean Harbors again. The Environmental Desk will coordinate with Transmission Operations and Clean Harbors to have this manhole re-cleaned.

Clean Harbors returned to location on 9/11/01. They were setting up when the WTC was attacked. With the traffic and the rush of people trying to leave Manhattan, the police would not let us open the manhole.

On 10/18/0 S&D returned to this location and washed and cleaned MH, treated as lead hazardous. Con Ed supervisor Peter Mullholland from Manhattan CS was on location to approve cleanup. Cleanup completed at 14:00 10/18/0. S&D removed 900 gallons of liquid.

3/13/03: CLOSE OUT – TRACK UNDER SPILL # 0111140. (JHO)

---

**Caller Remarks:**

caller states they have a 600 gallon tank discrepancy – not sure where the exactly the spill is –

---

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
Original leak reported between Rainey Substation (Queens) and West 110th St. Substation (Manhattan).

See also spills # 0104878, 0105022 and 0111140.

8/7/01: ERT reports leak located at E73rd St/York Ave. Clamp installed. They are doing calculations to see if there is another leak somewhere else on line. (ARS)

8/10/01: New leak amount estimated at 1500 gallons. 100 gallons recovered from manhole at W110th St/Amsterdam Ave (spill #0104878), 300+/- gallons recovered from manhole at E74th St/York Ave (spill #0105022). Total oil recovered = 400 gallons. (KMF)

2/16/02: after lengthy battle with City DOT, Con Ed was able to complete excavation of contaminated soils. A total of 13 samples were collected from trench floors and walls for TPH analysis. (JHO)

2/22/02: lab results received. High TPH values in 3 locations on floor of trench (beneath repair barrel). TPH came back as "lubricating oil". However, according to Pat Keelan (Con Ed Chem Lab) chromatograms for cable oil and lube oil are very similar. (JHO)

2/22/02, 6:00 PM: Told John Tranchina and Leon Paretsky (Con Ed S&TO) to scrape some additional soil from area if possible (Tranchina reports he is down to bedrock), take photos and 2 more samples, then backfill. (JHO)

2/25/02: spoke with John Tranchina – they were able to remove another 1' of soil beneath the repair area. Were only able to collect one sample (area 2 is down to bedrock). He took photos and backfilled. Also, in an adjacent electrical manhole they found a couple of gallons of oil on 250 gallons of water (spill #0111140). Sample indicates dielectric fluid. The oil probably came in through ducts. They found a concrete sump in the MH, but sump was all broken up – they will remove, dig down, sample and re-pour rge sump next weekend. Also, will put absorbents in the MH ducts to see if any residual oil is present. (JHO)

To be investigated as part of Appendix B site 7. SIWP submitted by Con Ed in January 2004. Comment letter sent to Con Ed 9/1/04.

Update 12/08/05

This spill is being closed based on site 7b investigation report found in eDocs link for spill # 0111140. (SKA)

## Caller Remarks:

CONED SPILL #134775 / SAMPLES TAKEN, CLEANUP PENDING TEST RESULTS

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

**The following DEC Investigator Remarks were available prior to 1/1/2002:**

## e2mis Notes:

Found 2 quarts of unknown oil mixed with 150 gal of water in MH-54570. Source unknown. Spill onto concrete. Sewer connection as per conduit plate #34-k-2. Samples taken for ID and PCB. PCB count <1ppm. Oil ID could not be run due to insufficient amount of sample.

Cleanup completed 1/22/01 1430hrs. Oil and water mixture removed via tanker under 50ppm. Used high pressure hose to double wash and scrub floor and walls with bio-gen solution. Manhoel rinsed with flush truck. Generated 5 plastic bags non-hazardous waste and transported to E 110th St Yard. Astoria Coporate Transportation tanker under 50ppm accumulated 1,460gal oil and water mixture. KMF 4/9/01.

1 GALLON ON 300 GALLONS OF WATER. CLEAN UP PENDING. CON ED# 134441

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

**The following DEC Investigator Remarks were available prior to 1/1/2002:**

DEC INSPECTOR'S NOTES

CON ED E2MIS REPORT 11-18-00

Approx. 1gal. of unknown fluid and 300 gals. of water found in Mh54570. A report of possible sewer leak going in MH54570 also sewage going into said MH. tag #28731 placed and sample taken. No fire, no smoke, sewer connection nor type of sump has been verified. Cleanup pending lab results.

Aroclor 1254 ppm 0

Sample yielded an insufficient amount of material for an oil identification analysis.

Liquid amount 2075gals. of water and oil  
Cleanup; remove all water and oil and still in the process of washing and scrubbing with slix degreaser.  
Spill source; unknown.

**Caller Remarks:**

A steam pipe is being removed and has the potential to release asbestos– no loss at this time.Measures are being taken to prevent loss nrc 969470

**DEC Investigator Remarks:**

3/8/11 – Raphael Ketani. A water main broke due to a failure on its own. I spoke to Dennis McLeetis at Con Ed ERT Desk (212) 580-6763. He said that the water main simply ruptured. Con Ed was not working on in the area. It is next to a Con Ed steam main. Once the water main broke the area filled with water and submerged the steam main. There was no release of asbestos, but Con Ed was required to report the incident. Right now (12:15PM), DEP has shut off the water to the main and the water is subsiding. Con Ed personnel will look at the steam main soon. Con Ed shut off the steam main as a precautionary measure.

I contacted Con Ed's ERT Desk a little while later. The person at the Desk said that there would not be an EMIS number issued for this incident.

Later, I contacted Mr. McLeetis regarding the final details about the incident. He told me that the asbestos covering on the steam pipe was not affected by the flooding. He added that traffic has resumed through the area.

As the asbestos was not affected by the water main break, I have closed the spill case.

**Caller Remarks:**

Above material discovered at above location on top of 500 gallons of water. Sample to be taken and cleanup is pending results.

Con Ed #149143. Feeder #38m73f was retired at location.

**DEC Investigator Remarks:**

Con Ed e2mis #149143:

On July 08, 2003, R. Davis mech B of Transmission Operations reported approximately 9 gallons of unknown oil and approximately 500 gallons of water in manhole 58563. Source and cause is unknown. All contained in manhole. Chem. Lab is scheduled to take samples in an hour. Feeder no. is D38M73F, per F. Acosta supervisor, 15856, feeder is retired as far as electrical, but pressure is still fed into the feeder.

**Caller Remarks:**

a coned employee was going to above to work and found the oil in basement: nrc has been notified due to floor drain

**DEC Investigator Remarks:**

05/01/08—I responded to the site. This is a Auto Repair shop. I checked the said oil spill (reported by Con Ed) location, there was no oil spill but water from the boiler. Two waste oil tanks unregistered, two 275 #2 oil tank. Shop Manager Goordap Sombat @ (212) 288.0173. Mr Sombat has been told to register the tanks. (sr)

see eDocs for ConEd report 211140.

UNK HOW PRODUCT SPILLED - 1/2 GALLON TO BLUESTONE - SAMPLE TAKEN CLEAN UP PENDING RESULTS

CON ED #130436

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

e2mis no. 130436:

16-MAR-2000 14:35HRS --- TRANSFORMER#5 --- 321 E.63ST SUBSTATION B.Contino#16863 Substation Operator reports Mr.E.Galloza#80867 found approx 1/2 gallon (32-ounces) unknown fluid on section of cable that was pulled from a duct....Approx 1-ounce fell onto concrete floor which will be cleaned up as 49-499ppm....Cable that was pulled is laying on top of bluestone/ soil with remaining unknown fluid...Cable is covered with a tarp to protect from rain....Chem-lab has been notified to take sample...Sign#s-01250 placed....Clean up pending test results...

Update to this ticket --- Cable was pulled from duct in structure of Transformer#5....

Lab-Results For E.63 St. V-#5 Are As Follows: Aroclor 1260 10 PPM  
Lab-Seq# 00-12510  
03/17/00

Operator reports that spill was cleaned up at the time of the report.

11/26/04

The exact source of fluid was not known. There was no other fluid other than what was recovered. The vault was excavated and lined with concrete since the incident.

#### Caller Remarks:

leak from feeder line 69m06 --- clean up pending sample taking. con ed 130180.

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

Con Ed e2mis #130180:

2/29/00 Operator found 1pt unknown fluid sweating from insulating tape in bank #5 on secondary bushing (fdr 69M06). Area affected by this spill is a plate from the secondary throat of transformer. Plate will be removed and placed in drum for disposal pending results. Transformer is being replaced so the source of the leak will be eliminated.

Unit was replaced in March 2000.

1.6.04  
In October of 2003 as per an agreement with the NYSDEC all bluestone was removed from the vault an an impervious moat was poured in concrete. A monitoring well has been installed in the vault as well. The old transformer was replaced in 2000.

CAPACITOR BANK CAN FAILED ON A- PHASE – SPILL CONTAINED CLEAN UP

WILL BE DONE WHEN THEY TAKE THE EQUIPMENT OUT OF SERVICE

CON ED #124275

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

CON ED E2MIS 124275 NOTES

Approx. 1/2 gal. of non PCB oil on the concrete floor in CAP Bank #1 "A" at 63 ST. Substation. The spill is not contained at

this time. C. Silveri is waiting for the equipment to be deenergized to contain the spill and inspect the equipment. There is a sign that reads "Non PCB oil" on the equipment. The spill did not enter the sewers or waterways. The spill will be cleaned up by substation's Maint. dept when the equipment is deenergized and grounded.

4-16-99 12:50

Cleanup was completed by substation maintenance. The concrete floor was cleaned with simple green and rags. The capacitor that was leaking was removed. It contains WEMCOL oil, non PCB (stated on the manufacturer's label)

Caller Remarks:

UNCAPPED UNUSED CABLE LEAKED PRODUCT ONTO CONCRETE PAD CONTAINED WITHIN VAULT – 3 OZ OF PRODUCT UNK PCB COUNT NO CLEAN UP

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"  
 5/22/98 e-mail from Con Ed ERT Lukshides:

Cleanup complete May 18, 1998 with simple green degreaser and speedy dry. Cable ends sealed.

6/12/98 e-mail from ERT Lukshides responding to questions in e-mail from Engelhardt:

PCB count cleaned as 50 –499. Spill Cleaned? How? yes, 18May98 @ 1145 using simple green (degreaser) and pads. Defective equipment repaired, replaced? cut cable ends properly sealed 15 May 98.

e2mis 116062

ENV. E. DE LA HOZ, 79237, REPORTED THAT APPROX 3 OZ OF CABLE OIL LEAKED FROM INACTIVE CABLE IN LIGHT & POWER TRANSFORMER 1 AREA, IN E 63RD ST SUBSTATION (INSIDE CAGE). THE OIL AFFECTED A SMALL AREA OF CONCRETE.

NO DRAINS OR WATERWAYS WERE AFFECTED.

THE LEAK IS NOT ACTIVE. A PAD WILL BE PLACED ON THE CONCRETE TO CONTAIN ANY FUTURE LEAK.

THE INACTIVE CABLE, 1C 13KV, APPEARS TO BE PAPER & OIL INSULATED. IT WAS CUT IN THE CLEAR AND LEFT IN PLACE WHEN THE LIGHT & POWER TRANSFORMER WAS TRANSFERRED TO ANOTHER FEEDER. THE CABLE NEEDS TO BE PROPERLY CAPPED OR REMOVED.

THE TRANSFORMER MUST BE DEENERGIZED FOR ACCESS TO THE LEAK AREA AND RESOLUTION OF THE PROBLEM. THE JOB WILL BE COORDINATED WITH THE UNDERGROUND.

THE PCB COUNT IS UNKNOWN (ASSUME 50–499 PPM). A SAMPLE MAY BE TAKEN WHEN THE EQUIPMENT IS DEENERGIZED.

1406 HRS CIG ROMERO NOTIFIED.

15–MAY–98

R. O'NEIL REPORTS THAT THE ENDS WERE PROPERLY SEALED TODAY. THEY DECIDED NOT TO PERFORM THE CLEANUP BECAUSE THEY FELT SUBSTATION PEOPLE SHOULD DO IT. THIS WILL EXTEND THE TIME THE REPORT REMAINS OPEN.

A SAMPLE WAS TAKEN AND WILL BE SENT TO ASTORIA LABS FOR ANALYSIS.

1–5 GAL DRUM OF WASTE WAS COLLECTED AND PLACED IN THE WASTE STORAGE AREA PENDING LAB RESULTS.

18–MAY–1998 11:45

THE AFFECTED AREA OF THE CEMENT FLOOR IN THE L&P #1 COMPARTMENT WAS CLEANED USING SIMPLE GREEN (A DEGREASER) AND

SPEEDY DRY.

THE INCIDENT WILL BE CLOSED.

Con Ed e2mis #137951:

28-JUNE-2001 20:00 hrs

Substation Operator M.Amerling #20393 was conducting an inspection in V3 Transformer #3 located @ E.63rd St Sub-Station Located @ 321 E.63rd St. when he discovered approximately (5) gallons of transformer oil spilled onto the bluestone in the structure. This vault is off the feeder run of 69M05. There is no dielectric-feeder in the structure. The station operator applied oil absorbant pads down in the structure. No sample was taken due to the station having a current PCB history report which is 10PPM. Yellow tag #S01196 was hung in the structure.

Clean Up was completed on Jun 29, 2001 by 0700. After the clean up was completed the oil was removed from the unit to repair the contactor which was damaged in the failure that caused this spill and possibly e2MIS #137911. The oily bluestone was removed and placed into drums and the oily surfaces of the transformer were wiped using simple green.

---

## DEC Investigator Remarks:

This incident was originally entered under the incorrect site "Unit Substation-East 64th Street", e2MIS Number 135509. The incident has been re-entered under the correct site "E.63rd St" e2MIS 136081.

02/13/01 14:53 hrs.

Mechanics Prandip Roopaiarine #189919 & Efrain Aroyo #52569 sub-station maintenance were conducting a routine inspection on feeder breaker 20m022 Pos.#2 when they discovered insulatum substance coming from the pothead they then reported the spill to senior operator Mitch Amerling #20393 Ph.#212-588-0296 the senior oper. reported that there was approximately 16oz. of insulatum substance that spilled onto the breakers concrete floor. A tag was hung tag #S01227 . The sub-station operator has contacted the chemlab to come & take samples of the substance. Oil absorbant pads were placed down in the structure & cleanup is pending test results. – Con Ed e2mis #136081:

Based on a reivew of the outlook folders it does not appear that samples were taken from this incident. S. Hanebuth – 85259

Station Supervisor W. Mowatt reports that the spill was cleaned up the same day by Station Operator R. Macknight, using simple green and rags. The waste was placed into a drum.

11.26.04

The pothead is not leaking.

The repairs to the leaking potheads were made at the time of the incident by electrical distribution mechanics. P.Keelan

~~~~~  
Con Ed e2mis #135201:

1/24/01 0840hrs

Mitch Armstrong, substation operator, reports he found 1000gal oil and water in transformer vault 5. Operator was in the process of adjusting the bus voltage in station #1 via the tap changer on bank 5 when he discovered the spill. All of the bluestone in transformer vault 5 had been previously removed. Fluid is in a trough between the foundation support beam and the vault wall. It looks like black crude oil that has migrated into the station from the street or an adjacent building. Estimate approx 500gal oil and 500gal water. Source of fluid is unknown. Transformer is not leaking and is not the source of spill.

1/24/01 1446hrs

LSN 01-00733, 18ppm PCB

1/24/01 2000hrs

Clean Harbors arrived on site with a 3000gal vacuum truck and were unable to access the site because of the position of the cars parked on 64th St. Cannot operate truck late tonight due to surrounding residential buildings. Will return in morning. Oil is in the bottom of the moat in an area separated by a concrete beam. Area is approx 18" wide and 40' long. Oil appears to be less than one inch deep on top of the 1' of water. The water on the other side of the beam only had some small drops of oil.

Oil ID results indicate oil is similar to dielectric fluid.

1/24/01 2123hrs

Updated reports faxed to Jennifer Rommel, NYSDEC and Chris Haas, NYCDEP.

1/25/01

Clean Harbors removed the oil/water mixture from the west side of the grade beam and placed water into drums. Checked with operator at 2030hrs and no additional oil was present.

1/26/01 Station operator reported at 0800hrs that some additional oil was present in vault. SSO staff placed pads in vault to absorb oil.

1/30/01 0045hrs

Operator reports that on 1/29/01 at 2345hrs, found approx 300–400gal of unknown oil in vault 5 pushing up from ground.

2/21/01 Stu Hanebuth, Env Spec, inspected vault and found that water now has much less oil floating on top than it did when incident was first reported. Area has been pumped out several times and absorbants have been placed on the water to collect the oil. Estimate oil is approx 8oz.

Soil borings and monitoring wells were installed by Jacques Whitford as per a DEC approved workplan. The following is a summary of the daily activities in transformer vault #5 provided by Jacques Whitford:

2/4/02:

Five soil borings, designated T5–SB–1 through T5–SB–5 and one well, designated MW–1 were installed in the transformer No. 5 vault. The soil borings were installed using hand auger. Well installation was facilitated using a vacuum truck. Conditions encountered at each boring location and monitoring well construction details are summarized below.

Saturated soil conditions were encountered from approximately 0.5 to 1.0 foot below ground surface. Separate–phase product was observed floating on water in the open boreholes. The soil below the top of the saturated zone to the boring bottoms was saturated with water and oil. Clean soil, or soil that did not contain residual oil, was not encountered in any of the borings. However, soil in the bottom foot of boring T5–SB–3 appeared to be less impacted than the overlying soils and the soil in the bottoms of the other borings. This relatively clean interval also represented a change of lithology.

MW–1: Was installed in soil boring T5–SB–2. As a result of enlarging the soil boring, the surrounding soil subsided and created a depression with a radius of 1.5 to 2 feet around the well in which oil accumulated. The well was constructed using an 8–foot long screen with approximately three feet below the water table. Perforated 8–inch diameter outer casing was installed from the screen bottom to approximately 8 feet above ground surface. This casing was left in place as a protective barrier for the well during backfilling of the vault with bluestone.

2/6/02:

MW–2 installation was completed in Transformer No. 5 vault at boring T5–SB–5. A four foot section of 8–inch diameter outer casing was added to the existing section of perforated casing previously installed to an elevation of 4 feet above ground surface. The 4–inch diameter well screen and casing extends to approximately 9.5 feet above ground surface. A 4–foot long section of outer casing was added to extend the outer casing to approximately 8 feet above ground surface. Sand pack was then added to the annulus between the well casing/screen and the outer

casing to a height of approximately 4 feet above ground surface. A 1.5-foot thick layer of bentonite was placed above the sand pack.

## DEC Investigator Remarks:

12/22/08 – See eDocs for Con Ed report detailing cleanup and closure.

Con Ed reports a sheen on the East River, but says it is NOT from ConEd Station.

Sangesland spoke to Coast Guard – They said they spoke to a tug boat in the area and they DID NOT see any sheen. As of 1:30PM

Coast Guard is NOT sending anyone out to the site.

## Caller Remarks:

UNK WHERE OIL CAME FROM-DID GO INTO SEWER

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

10/8/97, 0935 hrs: DEP, Coast Guard arrived on scene. Con Ed was trying to clean duct between two manholes using a flush truck rod. They hit an obstruction, forced some oil out – approximately 1 gallon got into french drain on bottom of manhole, and probably went to treatment plant. The manhole was cleaned yesterday, but the obstruction remains.

10/8/97, 0955 hrs: Called Ed Radkey, Con Ed Manhattan Environmental Field Manager (212) 338-4485. He will check on what group is doing the investigation and call back.

10/8/97, 1445 hrs: E. Radkey called back. Analysis of oil 66 ppm PCB – consistent with dielectric fluid, but no electric lines run through the manhole. Cable is paper/lead – could have some oil in it. Clean up completed.

Caller Remarks:

PRODUCT COMING OUT OF DISCHARGE TUNNEL FROM UNK SOURCE – MORE TESTING TO BE DONE 08–23–95 – THEY WILL CONTINUE TESTING TO DETERMINE THE SOURCE

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

Zhitomirsky (initial responder) notes: Called Mr. Devoti – USCG are on scene. Con Ed called contractor to boom off the area.

Engelhardt's notes: Spill called in on Saturday (soda ash, see spill # 9506204). On Tuesday @2:00, oil from south tunnel. Half hour later, appeared to be coming in from river. Ash pit has crack – USCG did dye test – poured dye into ash pit, but no dye showed up in water. They are going to put sorbent pads into manhole leading to tunnel to try to determine where oil came from. Took sample for analysis. Oil still periodically coming from tunnel. Tunnel is boomed off.

8/28/95: Len Gilford – oil is #6 oil leaked from open valve into soda ash solution used to neutralize acid solution in boiler which is used to remove oxidation. This solution was pumped into secondary containment which had crack – presently in process of repair.

**Caller Remarks:**

LOCATED IN A VAULT ON 1 GAL OF WATER. CLEAN UP IS PENDING DEENERGIZATION OF THE FEEDER.

**DEC Investigator Remarks:**

e2mis no 160600

Jose Rodriguez found approx 4 gallons of unknown oil on top of approx.1 gallon water.

He also reports that the sump pump was found unplugged, and he reports that this unknown oil is also in sump as well. I&amp;A will have to inspect unit when unit becomes de-energized.

There was no fire or smoke involved and no sewer or waterway was affected. The source and cause of the spill is unknown.

Environmental tag #47247 was installed. No substantial cracks and a concrete sump could not be verified due to the amount of fluid in vault. Clean up pending safe entry, after de-energizing, or further inspection of unit.

Also see 0506956.

Found @ 17:05. Called E/V desk @ 17:22 hrs. V3946 – E 74 ST 524 E/O YORK AVE. Jose Rodriguez 82289 Senior Field Operator was at this location working on feeder 24M81 and found approx 4 gallons of unknown oil on top of approx.1 gallon water. He also reports that the sump pump was found un plugged, and he reports that this unknown oil is also in sump as well.

I&A will have to inspect unit when unit becomes de-energized. There was no fire or smoke involved and no sewer or waterway was affected. There were no injuries related to the spill and no weather conditions contributed to the hazards of the spill. There was no private property affected. The source and cause of the spill is unknown. Environmental tag #47247 was installed. There is sump pump found un-plugged; no substantial cracks and a concrete sump could not be verified due to the amount of fluid in vault. Clean up pending safe entry, after de-energizing, or further inspection of unit. Logger F.Curtis 38078

Update 8-20-05 @ 02:44

Lab Sequence Number: 05-08735-001. TOTAL PCB 27 ppm J Moran # 01182

Lab Results 08/20/05 10:09. Lab Sequence Number: 05-08742-001

Analysis indicates the presence of a transformer oil.

Update 09/08/05 @ 1237 hrs. S.Asfour 49908 was at this location to do a drain and disconnect and reports to this desk @ 12:20 hrs that the tanker was only able to pump 56 gallons from unit, and the total capacity for this 396 gallons At this point he reports that 300 gallons is missing and that pipe going from sump pump to drain was full water and oil this was found @ 12:15 hrs, and CIG was called @ 12:28 hrs spoke to T.Parker 87739 @ 12:28 hrs.

Update 09/08/05 @ 13:05 Mr. Asfour reports that a partial clean was done and crew is at location awaiting arrival of various agencies. Logger F.Curtis 38078

Update 09/08/05 @ 14:11 hrs D.Pontecorvo 85413 ERT was on location @ 13:15 hrs to meet I&A Dept. And he also reports that DEP A. Kelly arrived @ 13:30 hrs and issued a Commissioners Order Stating that a clean up of this vault be done immediately. Order # E-29465  
Mr. Kelly states that this drain connects to a water treatment plant, and that no other city drains, or sewers or water way have been compromised. Also Mr. Pontecorvo has asked that upon completion of this clean up that ERT notified immediately as well. Logger F.Curtis 38078

23-FEB-2003 @21:50

M.Milano #68073 of FOD Dept found approx 15 gallons on unknown oil on top of approx 50 gallons of water in M-65410. At the location of N/S E69 St 332 E/O 2 Ave. He reports that the reason for entering this manhole was to trouble shot on feeder 20M04. Two samples taken PCB & ID. Tag #18150 placed. No fire or smoke involved in this incident. No sewers or waterways involved in this incident. No private property involved in this incident. The weather conditions had no affect on this incident. No injuries involved in this incident. Clean up pending crews ,tanker & lab results. Acct #3243

Update : CIG called 22:37 spoke to S.McKeeverb #15523 @22:37

Update: Due to the shortage of tankers on 11-7 shift, the clean up will be on shift #2 crew will remain on location till clean up starts. E/V desk was told by transportation, that all tankers on this shift had been reserved.

Update : 12-FEB-2003 @ 00:45

Due to low amount of Provisional EPA Numbers E/V desk has been asked as per ERT to hold off on ordering tanker until lab results become posted.

TOTAL PCB 14 ppm

Update 2-24-03 @ 13:20

A Munro #13615 reports that the cleanup is complete as of 13:00 . 1 barrel of ppe and debris and 1000 gallons of water and oil mixed . Double washed with slix and flushed. Tag #18150 removed. Cleanup crew and supervisor are listed in the event involved person screen , except for T Brealand #00969 , his name is not listed in the data base.

Update: 2/27/03

Lab Sequence #03-01528-001

Date Approved: 2/24/03 @ 17:45 hrs.

Date Received: 2/24/03

Date Sampled: 2/23/03

Oil ID: Oil Identification Analysis by NYSDOH 310-13 (Hydrocarbon Scan)

MATRIX: OIL GRAB

DESCRIPTION: MAN HOLE#65410

LOCATION: N/S E.64 ST.332'E/O 2ND. AVE.

STRUCTURE: MANHOLE 65410 FEEDER ID: 20M04

Analysis indicates the presence of a substance similar to a dielectric fluid.

**Caller Remarks:**

sheen on water 200 x 200 possibly coming from the generating

station – they are investigating and trying to locate source

– coast guard # 507692

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

Engelhardt, Comenale and Abraham Rodriquez (DOW) responded. Rich Boscarino, plant environmental manager on location. Coast Guard and NYC DEP (Sagar Chaterjee) also responded.

Observed sheen coming out of discharge tunnel. S&D Environmental on location (2 boats). They had deployed boom and were deploying sausage boom. Instructed Con Ed to maintain boom overnight and inspect discharge tunnel manholes (2) inside plant. Con Ed believes oil is residual oil from spill on 11/30/99 – # 9910376. Says there are holes in floor of plant which is top of tunnel. Spill was from T-11 turbine on above level. Oil spilled down to basement level and could have penetrated holes in floor. Oil may be trapped in tunnel.

Engelhardt and Rodriquez returned to the plant on Monday, 12/6. Sheen still coming out. Boom still being maintained outside discharge tunnel. Boscarino claims that they (plant environmental engineer, Steve Wong) checked all inlets into discharge tunnel and could not find any oil. Mr. Wong not in. Will confirm with him tomorrow.

Update from Con Ed on 12/8 that they had identified the leak. They believe it was from the 11/30 spill. They have found several other manholes. They found oil in the western most one. Engelhardt and Rodriquez responded. Con Ed has deployed sausage boom and accordin sorbent pads into about five manholes in the tunnel. Slight sheen still coming out of the tunnel. Will maintain until sheen is all absorbed. Scheduled to meet with engineer tomorrow who inspected the tunnel a couple of years ago to determine if there is anything else they should be doing. After sheen stops they will send a diver into tunnel to inspect.

1/5/00: In mid-December Con Ed located spill. Believed to be residual oil from spill on 11/30 – 9910378. Cleaned by Con Ed.

8 ounces of UNKNOWN OIL FOUND ON FLOOR. WILL BE SAMPLED.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

DEC Notes:

Containment: Information was unavailable at this time.

Oil containing equipment in manhole: Information was unavailable at this time.

Cleanup Plan: Sample to be taken. Cleanup pending sample results

–sps

Con Ed e2mis #120331:

10/05/98

1615 hrs – COA discovered and reported an oil spill, of approximately 8 ounces, in the electrical gallery on the third floor elevation. The Shift Manager inspected the site and observed that the oil had dripped from the open end of an electrical cable, located directly above the spill area, which had been cut and retired in place many years ago. The area was roped off and oil absorbent pads were placed on the oil spill area. The Shift Manager attempted to enter an incident report into e2MIS but was unable to due to system problems.

1756 hrs – Still unable to enter the incident into e2MIS, a report was submitted to CIG Operator Rowland by phone. Spill is contained and area is isolated and roped off. Since spill was in an electrical equipment area, spill was reported as possible PCB containing oil (50 to 499 ppm). Clean up will be performed in accordance with new procedure on handling an oil spill from electrical equipment.

10/06/98

15:00 – Per GEI 2.15 and the new procedure on handling oil spills from electrical equipment, the clean-up was performed by R. Elsayed and D. Jordan treating the oil as containing 50 to 499 ppm of PCB. A double wash and rinse was performed per GEI 2.15, which is sufficient for clean up. All waste generated during the clean up was bagged and put in a drum and moved to the 10th floor temporary PCB waste storage area. The open end of the electrical cable that dripped the oil was wrapped with several layers of oil absorbent pads and then sealed with heavy-duty poly.

## Caller Remarks:

2 OZ. SPILL AT 74 STREET STATION. UNKNOWN OILL. AREA HAS BEEN ROPED

OFF PENDING LAB RESULTS.

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
 Con Ed e2mis #120142:

09/29/98

15:00 – An Electrical Maintenance mechanic, Anthony Conte, was working in the 7th floor electrical gallery area and discovered a small accumulation (approximately 2 fluid ounces) of an oily substance on the floor near electrical compartment C-21. He reported his finding to the Station Safety Administrator, Eugene Kilpatrick, who then informed Environmental Engineer, Steven Wong.

15:15 – The spill site was inspected and it appears that the oily substance had slowly dripped out of threaded conduit joints directly above, over a long period of time (additional drips of oil could be seen hanging from the threaded conduit joints).

15:33 – Since this oil is apparently associated with electrical equipment, there is a possibility that it contains PCBs. S. Wong informed the Shift Supervisor, Eric Coleman, of the discovery so that an e2MIS report could be entered and appropriate notifications made. The area was roped off.

15:38 – Shift Supervisor, E. Coleman, begins to prepare report.

15:45 – S. Wong speaks to the Astoria Chemical Laboratory and requests a technician to come to the Station to take a sample of the oil to analyze for PCBs.

17:30 – Astoria Chemical Technician, F. Castellano, arrives and takes samples of the oil; one (1) wipe sample on the floor and one (1) bulk oil sample for "Oil I.D." test.

09/30/98

00:06 – Results of the lab tests are sent out via E-mail CHEMLIMS (reference Astoria Chem Lab Sequence #98–10254 for Oil ID test and 98–10256 for wipe sample on floor). Test results identified the oil as a lubricating oil with a PCB concentration of 2 ppm. This result would be consistent with cable pulling grease that had deteriorated with age and is now seen dripping out of the threaded conduit joints. 07:58 – Shift Supervisor, E. Coleman called CIG Operator Primeggia to provide update on oil analysis. CIG was told that the Station had received the oil spill results. It was found that the oil is very similar to lubrication oil and possess a PCB content of 2 ppm. The clean up is underway and will be treated as a regular, non-PCB oil spill.

09:00 – Clean up completed.

**Caller Remarks:**

FOUND OIL SHEEN IN SUMP WELL – UNKNOWN HOW IT GOT THERE – POSSIBLY #6

---

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

A thorough review of our station files that's not archived failed to turn up any useful information or data pertaining to the 06–13–95 fuel oil sheen in the package boiler sump. However, during the later half of 1995, we did have three small holes in the sump and it was drained, repaired and put back into service. Also, I recall a small fuel oil leak in the trench that leads to the sump and it was steam cleaned by a vendor, but I have no information on them. In addition, several bore holes were made adjacent to the fuel oil tank rooms as part of a proactive investigation which didn't turn up any subsequent oil room leakage. Jimmy Tillotson # 35983, Senior Engineer, was one of several people I spoke with on this matter and he provided me with a copy of Incident Report No. 74–95–0032, which was finalized/closed out on 07–18–95. To be finalized, all repairs would have been completed and verified. Based on this information, we request DEC closure. R. Lund, December 2005.

Closed. 1–4–06. GB

WATER LEAKED INTO OIL COMING OUT OVER FLOOR INTO TRUCK.

#### DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

1/20/94, 3:30 PM – Mr. Kessler (Con Ed) – last week excavation around steam main outside of plant – water accumulated in excavation. Water coming into building via steam main, spilled into catch basin below oil strainers. Spilled onto ground when catch basin overflowed into a contained trench. Cleaned themselves with pads. Clean Ventures to steam clean.

12/20/04: Con Ed submitted copy of OIL TOXIC OR HAZARDOUS SUBSTANCE (INCLUDING PCB'S AND ASBESTOS) SPILLS AND FIRES NOTIFICATION FORM dated 1/20/95, which states: "TYPE OF SPILL/FIRE AND CAUSE: WATER CAME THRU THE WALL WHERE THE 75TH ST MAIN EXITS THE BLDG. THE WATER RAN INTO A CATCH PAN LOCATED BY THE FUEL/OIL STRAINERS AND OVER FLOWED ON THE FLOOR AND INTO A TRENCH. THE TRENCH IS CONFINED TO THE STATION. ESTIMATED AMOUNT OF SPILL: APPROX 7 –8 GALS OF #6 FUEL & WATER. EXPECTED TIME OF CLEANUP: CLEANUP IN PROGRESS BY STAT. VENDOR TO FOLLOW." Close out. (JHO)

**Caller Remarks:**

OBSERVED CONTAMINATION IN DISCHARGE TUNNELS OF 74TH ST PLANT. HIRED MARINE POLL'N TO SET BOOM IN HARBOR NEAR DOCK AREA. USCG NOTIFIED.

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "TANG"

10/3/91: arrived on-scene at 15:40 hrs. Observed oil in tunnel. Oil observed in 3 tunnels throughout discharge tunnel. Spill of #6 oil into basement drainage system of plant. Facility has no oil/water separator system. Oil is being contained by boom in river. Marine Pollution Control is vacuuming oil from drain system. No Con Ed environmental staff are present. A substantial amount of oil is within drain system which runs at least 1 block from York Ave to FDR along 75th St. (AJS)

12/1/2003: THE STATION HAD A SPILL ON 12/3/2002 IN WHICH #6 OIL WAS DISCHARGED INTO THE EAST RIVER. THE SPILL WAS CLEANED BY CON EDISON AND EQUIPMENT WAS INSTALLED TO PREVENT THESE TYPE OF INCIDENTS FROM RE-OCURRING. ARS.

**Caller Remarks:**

DOES HAVE THE POTENTIAL OF REACHING A WATER WAY NRC WAS NOTIFIED; NOT YET CLEANED AND NO REF # AT THIS TIME;

**DEC Investigator Remarks:**

10/20/08 – See eDocs for Con Ed report detailing cleanup and closure.

8/21/2008 Sangesland spoke to Con Ed ERTS Desk – #6 oil droplets found inside tunnel – remediationwork was being done.

Former intake tunnel for a condensor at the generation station.

1500 ft long between generation station and East River. Tunnel had been plugged and taken out of service several years ago.

Water in tunnel was stagnant. Divers were in the tunnel doing drilling work near the bedrock when they discovered the oil drips.

Ken's Marine was called and put out booms on the East River near the plugged end of the tunnel. Tunnel is secure and now they are trying to figure out the source of the oil.

08/22/08 I spoke with Gwen Keeble of ConEd, she said they identified the oil as weathered "cable oil", mostly in sediment. They cleaned out the contaminated sediment and water last night and now awaiting the PCB analysis result.(sr)

Caller Remarks:

1 OUNCE RELEASED ONTO SOIL; CLEAN UP PENDING SAMPLE RESULTS; 207590

DEC Investigator Remarks:

207590. see eDocs

Report says this was boring 8A in basement of T-11 east of Desup storage tank. Work is for future York substation. Samples being analyzed.

8/15/07: Spoke with Kerri-Ann Southwell, EH&S Manager for E74th St station. While drilling structural boring B-9, approximately 12 ft south of B-8, evidence of petroleum odors was detected in weathered bedrock core. The core section was from 5'2" to 7'6". Petroleum odors not detected throughout entire core, just small section that was broken apart. Structural borings are being advanced in anticipation of construction of the York Ave Substation at the facility. See also spill no. 0705588. (JHO)

8/17/07: e-mail from Kerri Southwell with lab results indicating lube oil. See eDocs. (JHO)

9/13/07: closed – use 0705588 to track. (JHO)

**Caller Remarks:**

spilled into #9 sump. no smoke fire sewers or watrways affected

**DEC Investigator Remarks:**

e2mis 153178

03-MAY-2004

10:45 hrs – During an inspection, an abnormal appearance was observed in the # 9 Sump. An oil absorbent pad was lowered into the sump, which revealed that there was oil on the surface of the water, and the oil appears to be lubricating oil. The control panel for the sump pump was then shutdown. Estimated

quantity of oil in the sump based upon the size of the sump and the thickness of the oil layer is 10 gallons. Source of the lube oil could not be immediately determined, and an investigation will continue to try to determine the source.

11:00 hrs – Requested that the stations Contract Supervisor contact a vendor to mobilize for cleanup activities. Since Allstate Powervac was currently in the process of mobilizing to perform a boiler cleaning, their workforce was re-directed to the # 9 Sump.

12:40 hrs – Allstate begins cleaning of T-9 sump.

15:00 hrs – Allstate completed pumping out oil of T-9 sump.

booms in T-9 sump and adjacent pit connecting with T-9 sump to absorb any remaining residue.

5/10/04

Environmental Engineers, J. Fox and W. Ellwood, removed booms in T-9 sump and adjacent pit connecting with T-9 sump. Boom in adjacent pit was clean so no new boom was placed back in pit. T-9 sump has traces of what appears to be a small sheen so boom was placed back in T-9 sump to absorb any remaining residue.

5/17/04

Environmental Engineers, J. Fox and W. Ellwood, removed booms in T-9 sump. T-9 sump seems to be free of oil but boom was placed back in T-9 sump to absorb any possible remaining residue.

6/2/04

Environmental Engineers, J. Fox and W. Ellwood, removed booms in T-9 sump. T-9 sump appears to remain free of oil. No more boom added.

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ"  
REFERRED TO WATER FOR INVESTIGATION. RAW SEWAGE COMING OUT OF E74TH AND E73RD STREET REGULATORS/ ARS

E2MIS 150354

Sewer / Water Affected: Yes

Is / Was Fire Involved: No

IS / Was Smoke Involved: No

Substance: Oil sheen

Source of Spill: NYC sewer system

Cause of Spill: Sewer system overflow

Private Property Affected: No

08:23 hrs – OMA C. Macdowell was performing normal inspection rounds at the Station's dock and observed a light oil sheen in the river at the south end of the dock. He immediately notified Shift Supervisor J. Boehm.

08:24 hrs – Shift Supervisor notified Station's EH&S Manager, R. Boscarino, of the finding via Nextel phone.

08:25 hrs – Shift Supervisor called CIG operator Sean Mckeever and reported finding of oil sheen in the river in the vicinity of the south end of the dock. River was at slack tide and there were no visible oil clumps on the water. Shift Supervisor also spoke to ERT Bill Capune regarding finding. The EH&S Manager, who was at The Learning Center, informed the Station's Project Manager, S. Wong, about the reported finding via Nextel phone and asked him to investigate further.

08:28 hrs – At the Shift Supervisor's direction, COA G. Wagner calls Ken's Marine and requests a crew to respond to the 74th Street dock to investigate and take action if necessary.

08:29 hrs – Project Manager and Shift Supervisor arrive at dock and inspect entire dock area. They find no sheen, but see debris in the river in the vicinity of the dock, and sewer water flowing out of the regulator overflow pipe that is inline with 73rd Street and 74th Street. There is also a strong smell of sewer water toward the south end of the dock. Careful inspection at the location of the Station's north and south discharge tunnels finds no sheen or oil being discharged.

The conclusion is that the sheen was a third Party spill, and was the result of roadway oil that entered the river through the sewer regulator overflows due to overnight rain.

08:34 hrs – COA G. Wagner calls back Ken's Marine to cancel request for a response boat at 74th Street.

08:40 hrs – Shift Supervisor calls CIG operator Mark Schlagel to provide update that the sheen was not from the Station's discharge tunnel or any Station activity.

10:00 hrs – ERTs Bill Capune and Maureen Sicherman arrive at 74th Street to investigate incident. Project Manager escorts them to the dock and explains the incident details.

10:20 hrs – ERTs verify that there is no sheen or oil discharge from either the north or south discharge tunnel, and depart from the Station.

13:05 hrs – Personnel from NYCDEP (Philip Saglimbene, Jorge Villacis, and Keith McDonald) arrive at Station to investigate sheen report. Project Manager escorts them to the dock and explains the incident details. They confirm that the sewer system was overflowing this morning due to rain yesterday night and due to a blockage in the system.

13:30 hrs – NYCDEP personnel depart from the Station.

Caller Remarks:

coming off 24 hour diminimous – clean up in progress – 1 gal found in floor drain thids morning – ref #150083

DEC Investigator Remarks:

e2mis no. 150–083:

8/27/03 14:15 hrs. Operator took vendor to site to troubleshoot compressor and found floor covered with oil. Operator shuts down unit and begins cleanup. Vendor corrects problem.

Source of Spill :– Air compressor.

Cause of Spill :– Blockage in oil scavenging system.

28–AUG–2003

08:45hrs:– Rover observes approx 1 gallon of oil in the floor drains sump pit in the basement and notifies supervisor.

09:30 :– Operators placing absorbent pads in sump to remove oil.

09:45 hrs – Supervisor updated e2MIS report.

11:00 hrs – EH&S Manager, R. Boscarino begins investigation of incident by interviewing all individuals involved.

18:00 hrs – Operations flushed out all drain lines leading to sump to clear out any residual lube oil. Maintenance installing a drain line from the west air compressor condensate traps into a 55–gallon drum so that condensate can be observed for any contamination.

Both, Eric Dessen of the Law Department and Mark Maser of Corporate EH&S, determined that the spill must be considered a late notification since the drain line and sump should have been walked down upon discovery of the 8/27/03 spill.

08/29/03

07:30 hrs – Pads in sump show no more oil contamination, and spill is now considered closed. Clean pads will be left in the trench over the next several days to help capture any oil that may be adhered to the walls of the sump.

09:00 hrs – EH&S Manager, R. Boscarino continues investigation of incident.

15:00 hrs – Pads in sump appear to show no oil contamination.

09/02/03

09:00 hrs – EH&S Manager, R. Boscarino continues investigation of incident.

09/10/03

14:00 hrs – Repairs made to the air compressor appear to have corrected the oil carryover issue with the compressor.

---

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ"  
note: incident will be closed, will be followed under previous incident for the station dated 12/3/2002. ars

E2MIS 148495

12:30 hrs – Supervisor from Parkway Maintenance (W. Brown), who was working out on the dock on a pigeon dropping clean-up project, observed what he

described as "smoke" coming from under the dock, towards the south end. He observed this shortly after a large boat had gone by rapidly, causing a large wake

and "banging noises." The supervisor reported his observation to Station's Safety Administrator who had gone out to the dock to check on the work progress.

12:32 hrs – The Safety administrator called the EH&S Manager and reported a possible sheen at the dock.

12:35 hrs – The EH&S Manager arrived at the dock and observed an oil sheen emanating from under the dock in the vicinity of the south discharge tunnel outlet.

The tide was approaching low tide. The north discharge tunnel out was also inspected and nothing was seen coming out at that location.

12:43 hrs – EH&S Manager called ERT B. Pierre to report an oil sheen discharging from the Station's south tunnel and asked for Ken's Marine to respond to deploy absorbents and/or booms.

12:51 hrs – CIG Specialist Paul Di Donato made notification to National Response Center, Rawls, 646094.

13:01 hrs – CIG Specialist Paul Di Donato made notification to New York, State Department of Environmental Conservation, #390, 03-02022.

13:06 hrs – CIG Specialist Paul Di Donato made notification to CE Law, V. Cannon.

13:19 hrs – CIG Specialist Paul Di Donato made notification to Interstate Sanitation Commission, B. Mitchell.

13:22 hrs – CIG Specialist Paul Di Donato made notification to CE Audit, B. Kearny.

CIG Specialist Paul Di Donato made notification to CE Barge Master, M. Glasser.

13:33 hrs – ERT M. Daughtrey arrived at Station to investigate sheen discharge. Divers with Miller Environmental, who have been on site, went into tunnel to inspect the absorbent booms which they had installed near the outlet of the discharge tunnel at the beginning of their tunnel clean-up operations. The water

temperature in the discharge tunnel is notably higher than usual. The water temperature at the bottom of the tunnel is 90 deg. F. and the temperature near the

surface is about 120 deg. F. The unusually high temperature is due to warming up of the station and the accumulation of wastestreams such as steam trap

discharges.

14:05 hrs – Spill response boat from Ken's Marine arrived at the dock. They were instructed to deploy absorbent booms around the outlet of the south discharge

tunnel.

15:20 hrs – ERT B. Pierre called EH&S Manager and advised that this sheen discharge incident should be added on to this e2MIS report as a continuation, rather than entering a new incident report.

15:30 hrs – Miller Environmental divers reported that at the outlet of the south discharge tunnel, the absorbent booms that they had installed along the walls was still in place. Regarding the two layers of boom that had been strung across the tunnel, one was missing and the other was detached but still in the tunnel. The divers installed two new layers of boom across the tunnel.

17:00 hrs – Ken's Marine retrieved absorbent "pad-type" boom that they utilized when they first arrived, finished deploying two layers of absorbent "sausage– Environmental Detailed Incident Report

type" boom in front of the south discharge, and left site.

05/28/03

07:00 hrs – The south discharge tunnel at the dock is inspected; no sheen is present.

 Con Ed e2mis #146872:

22-JAN-2003

Sewer/Water Affected: No

Active Fire/Smoke: No

Substance: Lube Oil

Source of Spill: Turbine Unit #11-Lube Oil Return System

Cause of Spill: Residual Oil Leak from Lube Oil Return System

Private Property Affected: No

At 12:50, 74th Street Environmental Engineer James Fox discovered a petroleum release originating from Turbine Unit #11 Front Standard. Turbine Unit #11 is currently retired, and being dismantled. James Fox informed me of the Oil Spill at 13:00. Upon investigation, it was determined that approximately 4 gallons of lube oil had leaked from a section of return piping on the lube

oil system. The release has since been controlled by applying oil pads, and had not entered any waterways or sewers. The oil was released on to an impervious, concrete floor. Jason Wilkes of construction, Dannion Jordan and George Wagner from the operations department were dispatched to the spill site for clean up.

At 13:30, David Kinberg of the ERT Desk was informed of the release. Mr. Kinberg was informed that the spill clean up time was estimated to be greater than two hours.

**Caller Remarks:**

THERE IS A TUNNEL THAT LEADS FROM THE GENERATING STATION TO THE EAST RIVER. THE TUNNEL ALLOWS CONDENSATION TO LEAVE THE GENERATING STATION. WHILE THEY WERE CHECKING THE TUNNEL TODAY THEY DISCOVERED OIL IN IT. THERE ARE SOME CLUMPS OF OIL VISIBLE IN THE RIVER. IT'S ASSUMED TO BE #6 OIL, BUT THAT HASN'T BEEN CONFIRMED. MARINE COMPANY WAS DISPATCHED. NRC WAS NOTIFIED, ALSO.

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ"  
e2mis no. 146-672:

At 11:25 the security guard reported globs of oil in the river.

The rover immediately checked the tunnel outlets on the dock and observed the globs coming from the tunnel.

11:40 called up spill response vendor to install boom on dock.

This incident, which reported the observation of oil globs in the vicinity of the Station's south discharge tunnel, was investigated and determined to be the

result of the oil spill that occurred on 12/03/02. Information from this report has been incorporated into e2MIS #146233.

note: See 12/3/2002 spill at east 74th street station. This incident will be closed.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"  
Con Ed e2mis #146233:

03-DEC-2002 21:35:52

Sewer / Water Affected: Yes

Substance: #6 fuel oil

Still under investigation, suspect leak in fuel oil heater.

12/03/02

14:30 hrs – While investigating a problem with the SPDES sampling system out on the dock, a thick black substance, which appeared to be #6 oil, was found clogging the tubing. Looking over the dock into the water found an couple of globs of black material floating away from the dock in the vicinity of the north tunnel outlet. No sheen, however, was observed on the water.

14:42 hrs – The EH&S Manager called CIG operator Kevin Mcardle and reported a possible oil spill to the waterway with an initial estimated quantity of a few ounces based on the blobs that were actually seen in the water. Asked that Ken's Marine be deployed to the site with containment boom and absorbents.

14:47 hrs – ERT Sean Mahoney called EH&S Manager and advised that Ken's Marine was called and on the way, and ERT members were also on the way to the site. Further investigation by site personnel finds that there is #6 oil on the walls in the discharge tunnel.

15:08 hrs – Ken's Marine called EH&S Manager and confirmed that they were in route.

15:35 hrs –ERT members William Capune and Dan Ponticorvo arrive at site.

15:43 hrs – ERT Sean Mahoney called EH&S Manager and said that he would be faxing a Coast Guard Witness Statement to be filled out.

16:00 hrs – First vessel from Ken's Marine arrived on site. Started deploying containment boom in from of the north and south discharge tunnels.

16:12 hrs – Second vessel from Ken's Marine arrives on site and assists with boom deployment.

16:30 hrs – EH&S Manager spoke to Dennis of Clean Harbors. They will be on site at 09:00 hrs tomorrow with boom, vessels, and skimmer to replace Ken's Marine equipment. After consulting with the EH&S Manager, William Capune calls CIG and revises the estimated spill quantity to 20 gallons.

16:35 hrs – Env. Engr., J. Fox, called Adam at Miller Environmental about getting crew to start clean-up of discharge tunnel.

17:38 hrs – Miller Environmental called back and said that a supervisor and 3 technicians would be sent out with an estimated time of arrival of 19:30 hrs

19:15 hrs – Truckload of absorbent materials (snares, sausage boom, etc.) from Ken's Marine arrived on site. Materials were brought out to dock.

19:25 hrs – ERT Mike Kessler arrived at site.

20:15 hrs – Crew from Miller Environmental arrives on site.

20:20 hrs – Additional absorbent materials (snares, sausages) deployed in river within containment boomed area.

21:00 hrs – Miller Environmental placing snares and sausage absorbents in each of the 4 discharge tunnel access points and changing them out as they become soiled with oil.

21:45 hrs – After intensive investigation, Operations finds oily contamination on the condensate side of the fuel oil heater that is used when shuttling fuel oil back through the pipeline from Keyspan Ravenswood. This heater is used only occasionally (whenever fuel shuttling is needed) and was most recently put into service on Sunday (12/01/02) morning around 08:05 hrs. Based on this finding, the probable spill scenario is as follows:

- sometime between when the fuel oil heater was last used and 12/01/02, a leak developed in the heater allowing fuel oil to move from the tube side of the heater to the shell side of the heater;

- when the heater was put into service on Sunday, the steam and condensate pushed out all of the oil that had accumulated on the shell side of the heater into the condensate discharge line;

- since the steam pressure is maintained higher than the oil pressure when the heater is operating, the pressure differential kept additional oil from leaking out into the shell side of the heater;

- when the shuttling operation was completed, the fuel oil heater isolation valves were shut at approximately 10:31 hrs, preventing any further oil from going to the condensate discharge line.

Thus, the oil spill is believed to have occurred on Sunday, 12/01/02, shortly after 08:00 hrs, caused by a leak in the shuttling fuel oil heater, and the quantity was limited to the amount of oil that had migrated from the tube side to the shell side of the heater.

12/04/02

09:00 hrs – First vessel from Clean Harbors Coop arrived a dock and was instructed to start deploying their boom in front of the dock so that the booms from Ken's Marine could be withdrawn.

09:30 hrs – An additional workboat and a skimmer boat from Clean Harbors arrives at Station. The skimmer boat would be used to capture recoverable oil if any were seen coming out from the discharge tunnels.

11:00 hrs – Kerry Foley of NYSDEC called EH&S Mgr. for an update on spill investigation and clean-up. She was advised that the estimated spill quantity would be revised upwards somewhat and would be based on a calculation of the internal volume of the fuel oil heater found to be the cause of the spill. Although the figure was not yet available, the revised quantity would not be more than 100 gallons.

11:10 hrs – U.S. Coast Guard (BM3 Steven Decker, MST3 Mike Brady, MK3 Oscar Farios, GM3 James Caliendo, and MST3 Tim Fosdick) arrive at Station. EH&S Mgr. reviewed the entire incident history, its current status, and the planned operations with them. The Coast Guard was also shown all areas related to the incident including the dock, the package boiler fuel oil heater area, and the 4 access points to the discharge tunnel from the Station's basement. No sheen or globs of oil were observed by the tunnel discharge to the East River. The Coast Guard was asked whether the boom along the dock should be maintained; they advised that it wasn't necessary and that all of it could be removed. They were also advised that the estimated spill quantity would be increased somewhat. Overall, the Coast Guard indicated that they were satisfied with the spill response and plans, and imposed no additional requirements.

12:30 hrs – ERT members William Capune and Sean Mahoney arrived at site and were updated as to incident status. They too were advised that the estimated spill quantity would be increased somewhat.

12/05/02

07:00 hrs – Crew from Miller Environmental (1 supervisor, 4 technicians) arrives on site and works on recovering oil from the discharge tunnel using snares and absorbent materials.

08:00 hrs – Crew from Allstate Power-vac arrives on site with a vacuum tanker truck to work on cleaning out the fuel oil heater that is suspected to have caused the spill.

13:00 hrs – Abraham Rodriguez, from NYSDEC arrives at the site. He is given a complete overview of the spill incident and inspects the fuel oil heater area, the dock, and the discharge tunnel access locations in the basement. No sheen or globs of oil are seen emanating from the discharge tunnel at the river. He is satisfied with the spill response and plans.

19:15 hrs – Calculation of the shell-side internal volume of the fuel oil heater, which equates to the probable quantity of fuel oil spilled, yields an estimate of 40 gallons. The e2MIS report is updated.

19:19 hrs – EH&S Manager called CIG updating the estimated spill quantity from 20 gallons to 40 gallons.

19:30 hrs – Allstate Power Vac completed the cleaning out and opening of the shuttle fuel oil heater.

12/06/02

07:00 hrs – Crew from Miller Environmental on site to continue oil recover from the tunnel using snares and absorbents.

12/7/02 & 12/8/02

Crew from Miller Environmental on site to continue oil recover from the tunnel using snares and absorbents.

12/9/02

Miller Env. continuing oil recovery. Divers from International Telecom Group, subcontracting to Miller Environmental, arrive on scene and begin setup and testing of equipment.

12/10/02

Miller Env. continuing oil recovery. Divers finishing setup of equipment. Diver went into T11 manhole and did survey of south tunnel.

12/11/02

Miller Env. continuing oil recovery. Diver went in T-11 manhole and observed two sewer pipes running across south tunnel about 45' in from tunnel outlet. The tunnel is clean from pipes to outlet of tunnel. Second diver went in and power washed 12 foot area in south tunnel from pipes heading west toward building.

12/12, 12/13, 12/14, 12/15/02, 12/16-12/18/02

Miller Env. continuing oil recovery.

12/19/02

Miller Env. continuing oil recovery. Diver went into T-11 manhole and power washed from previous spot. Second diver went in and continued power wash. Skimmer set up and running at manhole by metal dumpster.

12/20, 12/21, 12/22, 12/23, 12/24/02

Miller Env. continuing oil recovery.

12/26-12/31/02, 1/3, 1/4, 1/6-1/11/03

Miller Env. continuing oil recovery. Diver went into metal dumpster access hatch and power washed from previous spot.

01/12/03

11:25 hrs – A Station security guard, inspecting the dock area during his normal rounds, observed a few globs of a black material floating in the river in the vicinity of the south discharge tunnel outlet. He reported his observation immediately to rover L. Claris.

11:35 hrs – The rover immediately checked both the north and south tunnel outlets, verified globs of congealed #6 oil by the south tunnel, and reported back to the Shift Manager. The East River was at slack tide.

11:40 hrs – Ken's Marine, the Company's 1-hour OSRO, was called and informed of a possible spill and was requested to report to site and deploy boom.

11:45 hrs – Shift Manager, W. Allen, notified Station's EH&S Manager of observation. The oil pipeline fuel oil leak detection system was reviewed and the East River Drive was inspected for oil leaks. Station personnel also began inspection of equipment in station including fuel oil heaters and tunnel manholes..

12:05 hrs – No oil was observed in vicinity of tunnel outlets.

12:52 hrs – EH&S Manager arrives on site and inspects discharge tunnel through the 4 access locations in the Station. No new oil was observed on the water surface. Dock area is also inspected and no oil is observed.

13:00 hrs – Ken's Marine arrived at station dock with their workboat. The watched the south discharge tunnel outlet but did not observe any oil globs floating out of tunnel or in the vicinity.

13:15 hrs – Based on thorough inspections of tunnel and Station equipment, the EH&S Manager concluded that the globs observed earlier were not the result of a new spill but rather, were residual oil from the original spill that migrated out of the tunnel.

13:30 hrs – As a precaution, Ken's Marine installed two layers of sausage absorbent boom at the south tunnel outlet, under the wood dock structure, and then departed.

14:00 hrs – Inspector from NYCDEP, Wai Man Wong, arrives on site. EH&S Manager and Env. Engr. J. Fox discuss incident with him and walk him through the Station. Inspector is satisfied with our response.

14:30 hrs – NYCDEP Inspector leaves site.

15:05 hrs – CIG Operator Morris is called and informed of change in status, that the earlier observation was not a new spill.

01/13/03

Miller Env. moved location to T-11 access. Removed old boom that was used as a dam and replaced with new boom.

0900 hrs 2nd skimmer located at 3rd access hatch by #10 condenser is in service.

09:36 hrs – Representatives from U.S. Coast Guard (MST3 Kelly Garot, BM3 Michael Kenfield, MST3 Carlos Sivilla, and MST3 Michael Brady) arrive at Station. EH&S Manager, and Env. Engrs. J. Fox and W. Ellwood, brief them on yesterday's incident. After a thorough inspection, they are satisfied with the incident response and status.

10:20 hrs – Coast Guard representatives leave site.

10:45 hrs – Jane O'Connell of NYSDEC calls EH&S Manager for an update on the yesterday's reported spill. The entire incident was explained and this spill incident report was referenced. She was also informed that the e2MIS report that was entered yesterday (#146672) would be voided, and this report would be amended to include information about yesterday's events.

1/14, 1/15, 1/16/03

Miller Env. continuing oil recovery. Diver went into T-11 access hatch and power washed from previous spot. Second diver went in and continued power wash.

10:00 hrs – Received U.S. Coast Guard Notice of Violation, via interoffice mail from Anthony Drumblings. Original Certified mail had been delivered to him and he forwarded it to 74th Street Station. The proposed penalty for the spill is \$625.00.

11:00 hrs – Faxed copies of USCG Notice of Violation to Law Department, Corporate EH&S, and ERT. Mailed originals to Law Department via interoffice mail.

1/17, 1/18, 1/20–1/22, 1/24,1/25, 1/27–1/30/03

Miller Env. continuing oil recovery. Diver went into T-11 access hatch and power washed from previous spot. Second diver went in and continued power wash.

23:19 hrs – EH&S Manager called ERT David Duke and reported that a small leak on the west main heater was discovered at 22:45 hrs and that Operations was taking the heater out of service as of 23:00 hrs. ERT was informed that this leak has been determined to be the true cause of the oil spill originally reported on 12/03/02, rather than the shuttle heater, but that any additional oil that has been spilled to the discharge tunnel has not been discharging to the East River due to continuing clean-up operations that have been going on in the tunnel since 12/03/02 using barriers, absorbents, and divers.

01/31/03

00:15 hrs – EH&S Manager called ERT D. Duke and reported updated spill quantity to be an additional 180 gallons. This was based on visual observation of the rate at which oil was appearing in the fuel oil heater condensate oil/water separator. The rate of 16 ounces per hour, extended over approximately 60 days, yields 180 gallons. Thus the total reported spill quantity should be 40 gallons, plus an additional 180 gallons, for a total of 220 gallons.

0700 hrs Miller Env. continuing oil recovery. Diver went into T-11 access hatch and power washed from previous spot. Second diver went in and continued power wash.

10:30 hrs – NYSDEC engineer, Abraham Rodriguez, arrived at 74th Street for his quarterly unannounced SPDES inspection. In addition to the usual inspection items, Mr. Rodriguez was informed about the installation of the new cooling and separator equipment, discovery of the true spill cause, updated on the revised spill quantity, and briefed about the continuing clean-up status.

2/1, 2/3–2/6, 2/10–2/14, 2/19– 2/21, 2/24–2/28, 3/1/03

Miller Env. continuing oil recovery.

03/06/03

14:30 hrs – Engineering Inspector L. Sewell reports to Env. Engr. W. Ellwood and EH&S Mgr. S. Wong that the vendor cleaning the tunnel has reported that they think that there may be new oil going into the tunnel. EH&S Mgr. investigates and finds some indications of new oil in the tunnel including absorbent booms soiled with #6 oil and spots of oil on the surface water in the tunnel. The supervisor from Miller Environmental reports that he is not completely certain that the oil is new and that the temperature of the water in the tunnel seems higher today than previously, possibly causing oil residual oil on the walls to loosen. Inspection of the station's sumps, oil/water separator and equipment areas finds no abnormal conditions. The tunnel outlet is inspected and there is no oil discharging to the river (due to the seven layers of boom that have been installed in the tunnel outlet to prevent any migration out of the tunnel during the clean-up project). If the oil sighted is new, the estimated quantity is less than 20 gallons. Investigation is continuing to try to determine if there is any new oil entering the tunnel, or whether its just oil from the old spill being loosened off the walls.

16:50 hrs – Thorough investigation, by Operations and EH&S personnel, of all fuel oil heaters, piping, tanks, systems, sumps, and related equipment has been unable to identify any source that might have caused any new #6 oil to enter the tunnel. Observation and investigation will continue as needed.

17:00 hrs – EH&S Mgr e-mailed a copy of this updated e2MIS report to ERT.

17:35 hrs – ERT, M. Dougherty, informed EH&S Mgr. that Jane O'Connel of NYSDEC has been informed and that Inspector A. Rodriguez will probably visit site on Monday.

03/07/03

00:45 hrs – Shift Supervisor, W. Forte, had been investigating any other possible sources that may be adding oil to the discharge tunnel. He discovered some oil at the sodium hypochlorite injection manhole (which is a retired system) of the intake tunnel. The Shift Supervisor immediately calls the EH&S Mgr at home.

02:00 hrs – EH&S Mgr arrives on site and investigates further. Inspection of the intake tunnel at various other points finds no oil contamination, and no oil is seen discharging from either the intake or discharge tunnels.

0700 hrs – Miller Env. continuing oil recovery. Diver went into T-11 access hatch and power washed from previous spot. Second diver went in and continued

power wash.

08:00 hrs – The sodium hypochlorite is a former cooling water pump cavity. Maintenance crews begin working on removing the 17 foot long hypochlorite injection probe and the manhole cover (which is held in place by thirty-two bolts).

15:00 hrs – Removal of the injection probe is complete, yielding a 6" hole in the manhole cover. Inspecting through the 6" hole finds that the oil in the pump

cavity has a depth of approximately 2 feet. Based on the depth of oil and the dimensions of the cavity, the estimated quantity of oil in the cavity is 360 gallons.

It is presumed at this time that the oil is from the same fuel oil heater leak and accumulated in the pump cavity through some

subsurface defect.

16:00 hrs – Maintenance crews will continue working to remove the 3.5' diameter manhole cover and arrangements have been made to have Allstate PowerVac on site tomorrow morning to start clean-up in the pump cavity. Based on the 360 gallons of oil estimated to be in the pump cavity, and the 20 additional gallons that is estimated to have gone to the discharge tunnel, the total spill quantity estimate is now 600 gallons.

18:35 hrs – Updated e2MIS report, then called ERT Mike Dougherty and informed him of latest change in incident status, and that e2MIS report has already been updated.

03/08/03

Miller Env. continuing oil recovery. Diver went into T-11 access hatch and power washed from previous spot. Second diver went in and continued power wash.

08:00 hrs – Manhole cover at hypo tanks had been removed last night and crew from Allstate Power-vac has arrived on site with a 3,000 gallon vac truck.

10:00 hrs – A steam supply and a lance assembly was fabricated to help warm up the oil in the manhole to facilitate vacuuming it out.

16:00 hrs – Despite continuous heating with steam and efforts by Allstate Power-vac to remove the oil in the manhole, the vac truck's hose keeps getting clogged due to the thickness (high viscosity) of the oil.

03/10/03

Miller Env. continuing oil recovery. Diver went into T-11 access hatch and power washed from previous spot. Second diver went in and continued power wash.

08:00 hrs – Allstate Power-vac crew arrives on site again with a vac truck to remove oil from manhole. Miller Environmental and diver crew also on site to

continue clean-up in discharge tunnel. Steam is again fed into the manhole to warm the oil to facilitate vacuum removal.

09:45 hrs – ERTs Bill Capune and David Duke arrive on site to check on spill incident.

11:50 hrs – NYSDEC representative Abraham Rodriguez arrives on site. The EH&S Manager shows him the manhole, and all available drawings of the manhole arrangement. He is informed that the oil probably seeped into the manhole through a subsurface defect path between the nearby package boiler wastewater trench and the manhole. Mr. Rodriguez witnesses the seepage of water into the manhole on its northwest wall, and also that there is no oil in the inlet tunnel at

T-11 saltwater pumps, and no discharge into the river from the inlet or outlet tunnels.

12:55 hrs – Mr. Rodriguez leaves 74th Street Station and proceeds to 60th Street Station for a brief inspection. The ERTs also

leave the site.

14:00 hrs – The manhole cover to the inlet tunnel, in the vicinity of the metal dumpster, is removed and verified to be oil free.

16:00 hrs – The Allstate Power–vac vacuum truck leaves the site with a full load (3,000 gallons) of oil/water (mostly water). Another vac truck is reported to be on the way to the site.

18:00 hrs – A second Allstate Power–vac truck arrives on site. In an effort to improve the vacuum's performance , the truck is backed into #1 door so as to minimize the length of hose needed and the friction losses through the hose.

20:00 hrs – Despite continuous heating with steam and the close proximity of the vac truck, the 3" hoses being used keep clogging–up and preventing suction of

the oil. The EH&S Manager confers by phone with the Allstate Power–vac Project Manager, and they decide to try again the following morning with a 6" hose.

03/11/03

Miller Env. continuing oil recovery. Diver went into T–11 access hatch and power washed from previous spot. Second diver went in and continued power wash.

09:00 hrs – ERT Bill Capune arrives on site along with vac truck and crew from Allstate Power–vac.

09:30 hrs – Allstate setting up vac truck with a 6" suction hose. Meanwhile, a 1–liter samples of the oil in the manhole is taken as well as a sample of fresh #6 oil from the PB fuel oil heater. The sample of oil from the manhole is noticeably more viscous, appears to be a dark brown color, and is less odorous than the fresh oil sample. The samples will be sent to Astoria Lab for testing, including pour point, viscosity, sulfur content, API gravity, flash point, and oil ID.

14:00 hrs – Allstate Power–vac has removed the mass of viscous oil in the manhole and all free oil on the manhole's water surface. Clean–up of the walls in the

manhole remain and Allstate will devise power washing tools/wands to reach the wall surfaces.

3/12/03

Miller Env. continuing oil recovery. Diver went into T–11 access hatch and power washed from previous spot. Second diver went in and continued power wash.

03/13/03

Miller Env. continuing oil recovery. Diver went into T–11 access hatch and power washed from previous spot. Second diver went in and continued power wash.

08:00 hrs – Allstate Power–vac cleaning walls of former pump cavity to intake tunnel, near hypo tanks, using high pressure &

temperature power washer and vac truck.

14:00 hrs – Allstate's cleaning effort in former pump cavity is incomplete due to limited reach into cavity from their work position on the basement floor. EH&S Mgr. requested that Miller Environmental clean rest of pump cavity using their diver crew.

3/14/03

Miller Environmental begins cleaning of manhole of intake tunnel by hypo tanks.

03/15/03

Miller Environmental continuing cleaning of manhole of intake tunnel by hypo tanks.

14:00 hrs – Miller Environmental completed cleaning two of the walls in the former pump cavity.

3/17/03

Diver went into intake tunnel to inspect other retired pump cavities west of manhole. They found no trace of oil in other cavities. Second diver went in intake

tunnel, went east of manhole and noticed 1/2" to 1" thick oil on roof of intake tunnel up to 60 feet away.

3/18/03

Diver went into intake tunnel with video camera and found that west of the tunnel on roof there was 1/2" to 1" thick oil on roof up to 60 feet away and east of manhole up to 160 feet away.

3/19/03

Divers went into intake tunnel to set up booming system to contain oil while cleaning.

NOTE: THIS INCIDENT REPORT IS NOW TOO LONG TO ACCEPT ANY ADDITIONAL INFORMATION, AND IS THEREFORE CONTINUED IN e2MIS

#148495.

DEC Notes:

12/4/02 ERT Sean Mahoney–upgraded to 20gal. Heater leaking in package boiler area. Should not be considered an active leak. Resetting boom. Clean Harbors Co–op Dennis McCarthy on site. Steam pressure is greater than pressure of oil line and is therefore not actively leaking. (KMF)

12/4/02 Steve Wong, EH&S Mgr of station– Clean Harbors on site. Picking up boom placed by Ken's Marine. Putting together Health and Safety plan for divers to cleanup tunnel. Miller Env. booms inside tunnel. Tunnel cleanup will be completed in short windows during low tide (3am). Leak is from heat exchanger within package boiler area. Was in service on Sunday. Suspected

cause is a tube defect. Steam pressure > oil pressure during normal operating conditions. When steam was shut down, oil entered steam side. Isolated now. Not active leak. See very little oil on surface. Most is in tunnel on walls. (KMF)

12/5/2002: Con Ed monitor (Rodriguez) had a meeting with Steve Wong, E,H, and S manager of the East 74th Street Generating Station. The purpose of the meeting was to investigate the causes of a #6 oil spill that impacted the East River. The spill happened two days earlier. The spill was caused by a pinhole in one of the #6 oil heaters (heat exchangers). #6 oil is heated in a shell and tube heat exchanger using steam. The pressure of the steam is much higher than the pressure of the oil. The station personnel think that when they shut down the steam, some oil entered the steam side of the heat exchanger. The steam side discharges directly to the river with no treatment. The station used to have a oil water separator in that line, but they removed it because it could not withstand the high temperatures of the condensate (200 degrees Fahrenheit). The discharge tunnel was inspected and there was no sign of visible sheen leaving the station. However, there is a light sheen and black staining on the tunnels below the station. Miller Environmental is cleaning the sheen using pads. The station hired divers to remove the black staining from the tunnel wall.

Due to the high temperature of the condensate, it cannot be pumped to the station's sumps because it damages the sump pumps. However, the station has a project to redirect the condensate to the sumps and adding a heat exchanger to reduce the condensate temperature. The final drawings are to be finished at the end of this month. A copy of the drawings was requested for review.

The Coast Guard had 5 inspectors in the station last night; They were satisfied with the station's cleanup efforts.

1/31/03 0913hrs ERT Bernard Pierre called with an update. A total of 180gal of #6 fuel oil was determined to have spilled at a rate of 16oz/hr. (KMF)

2/6/2003 Drawings and specifications were received by the department regarding the installation of a heat exchanger system for the steam condensate. The project is expected to be completed June 30, 2003.

3/10/2003. Oil was found on the intake tunnel trapped inside a manhole. The divers mentioned that areas that were cleaned inside the discharge tunnel were starting to become stained with oil again. The station underwent a search of the possible source. They found that oil was trapped inside a manhole in the intake channel that now is not used anymore. Apparently there is a cross connection between the intake and the discharge. Con Edison estimates that around 2' of 6 oil was trapped in this manhole. Con Edison was warming the oil using steam to facilitate its cleanup. Clean ventures was at the site performing the cleanup. (ARS)

4/29/03 Update from ERT Dave Duke

On 4/22/03 a sample taken from the tunnel area returned as a heavy fuel oil. Updated as 375gal. It was not ID'd as old lube oil as in the manhole. I requested that they use the same e2mis number (147703) to track this incident and send me the updated report. (KMF)

6/26/2003: The station was inspected. A sheen was visible in the outfall. Con Edison will now move to a maintenance phase of the cleanup. Con Edison completed the installation of the steam condensate condenser. ARS

9/12/2003: The condenser is in operation. A meeting will be set to see if the spill can be closed. ARS

10/31/2003: OUTFALL AND TUNNEL WAS INSPECTED BY RODRIGUEZ AND FOX(CON EDISON). NO EVIDENCE OF SHEEN WAS NOTICED. ABSORBENTS WILL

BE LEFT AT OUTFALL AS A PRECAUTION. INCIDENT IS CLOSED. ARS

Caller Remarks:

SAMPLES TAKEN FROM DEBRIS IN BOILER ROOM TRENCH. CON ED # 142745.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"  
 e2mis 142745

05/09/02, 16:00 hrs – EH&S manager opened an e-mail from Astoria lab. LSN 02-03790 contained lab results of six samples of debris that were taken from HP boiler room trenches. The sample from the vicinity of the treated water surge tank was 1,400 ppm for Aroclor 1260.

16:55 hrs – ERT S. Mahoney called EH&S manager back and said that if the trench could no be cleaned out within 2 hours then the situation should be reported to CIG and an e2MIS report needs to be entered.

17:20 hrs – Shift Manager, W. Allen called CIG McGuire to report incident. CIG was advised to assume that the quantity of Aroclor 1260 would be less than 5 gallons.

18:30 hrs – EH&S Manager called B. Cohen to discuss regulatory requirements for clean-up start time. B. Cohen advised that since this was obviously an old spill, there is no regulatory requirement for clean-up start time, however it would be prudent to start within 24 hours of discovery.

19:15 hrs – Installed barrier in trench downstream of the location where the sample was taken that produced the high PCB result.

05/10/02, 09:10 hrs – EH&S manager spoke to P. Keelan (of Astoria Lab) and discussed the implications of the finding of mercury levels as high as 10 ppm in the trench debris samples. His opinion was that the mercury that was detected was not the result of an elemental spill of mercury but rather was probably simple

contamination of the debris due to years of accumulating paint flakes in the trenches (which have been known to sometimes contain lead, mercury, or PCBs). Mr. Keelan stated that the mercury contamination would not be a hazard to Station employees working of sampling or clean-up.

09:15 hrs – EH&S manager conferred with ERT's R. Lo and S. Mahoney on whether the findings of lead and mercury in the trench debris required any reporting. They stated that it did not since the finding could not be associated with any known spill event.

10:35 hrs – ERT R. Lo called EH&S manager and informed him the Abraham Rodriguez of NYSDEC would be arriving at the station around 13:00 hrs to investigate the incident.

13:15 hrs – NYSDEC inspector Abraham Rodriguez arrived at Station and was briefed about incident by EH&S manager. Action plan consisted of taking additional samples from the trenches to define the limits of the high PCB contamination and to start clean-up work in the vicinity of the high result.

14:00 hrs – Eleven additional samples of trench debris were collected and a sample of oil/water separator unit discharge water was also taken.

15:00 hrs – Station mechanics started clean-up of the trench in the vicinity of the 1,400 ppm PCB sample result.

19:00 hrs – The mechanics finished removing as much debris as possible from the trench, 10 feet in both directions from the 1,400 ppm PCB sample location. Approximately 50 gallons of dry debris was bagged and placed in a 55 gallon drum.

06/18/02

10:00 hrs – Incident type changed from "Abnormal Occurrence" to "Spill – Dielectric – Other" per instructions from B. Cohen and

08:00 hrs – Clean Venture mobilizes on site to begin clean-up of all trenches in the HP boiler room basement during the HP boiler outage.

7/17/02

Clean Venture completed cleanup of contaminated soil from trench and double wash of trench. Eleven 55-gallon drums of contaminated soil debris accumulated.

7/18/02

Waste pickup of the 11 drums of contaminated soil.

7/25/02

09:00 hrs – Chem Lab Tech J. Burgos #14404 took 15 wipe samples of trench area.

7/27/02

Received lab results LSN 02-06891-001; of the 15 wipe samples the highest PCB concentration was 1,730 ug/100cm<sup>2</sup>

7/29/02

EH&S Manager S. Wong e-mailed Barry Cohen with results and requested guidance on further actions to be taken. Barry Cohen recommended using a soda

blasting technique used by Brooklyn/Queens (B/Q) Environmental on manholes.

8/02/02

Env. Eng. J. Fox called B/Q Environmental Bob Saladino to request their organization do soda blasting on the trench. Saladino said that they would do it when

as soon as their schedule would permit, which would be a month or two.

11/11/02

08:45 hrs – B/Q Environmental supervisor and crew of 3 along with CFS supervisor and "over 50 ppm" tanker and driver arrived to do soda blast. Soda blast

completed at 17:30 hrs. Chem Lab Tech requested by J. Fox to take wipe samples. Tech to come on 11/13/02.

11/13/02

Chem Lab canceled due to overload of work and rescheduled.

11/20/02

09:45 hrs – Chem Lab Tech Guy Ballerino #44296 took 7 wipe samples of trench as per grid made by Bob O’Kane of B/Q Environmental.

11/27/02

Received lab results LSN 02-11022-001 of the 7 wipe samples with highest PCB concentration of 292 ug/100cm<sup>2</sup>.

11/30/02

EH&S Manager S. Wong e-mailed Barry Cohen with results and requested guidance on further actions to be taken. Barry Cohen scheduled to come see the trench area on 12/05/02 and evaluate.

12/05/02

08:30 hrs – Barry Cohen came to Station to see trench area and evaluate further actions to be taken. Cohen will discuss situation with EPA representative.

12/13/02

Barry Cohen e-mailed S. Wong and J. Fox about his meeting with David Greenlaw of EPA Region II. The encapsulation options are as follows:

1. double coat the floor and walls with 2 different colors of paint (epoxy coating);
2. place a solid barrier (a solid liner – not plastic sheeting) on the floor and walls;
3. fill the trench with concrete, using a pipe encased in concrete to carry the A/C water.

In addition, there must be a PCB label placed in the trench on the coating, solid barrier, or concrete.

Alternatively, the contaminated trench concrete could also be removed down to uncontaminated material and disposed of as PCB waste.

1/22/03 – 1/23/03

Enecon NorthEast came in and double coated the trench with an encapsulating epoxy.

1/28/03

Chem Lab Tech L. DeSantis #51628 came in to take 7 wipe samples from trench.

02/5/03

Received lab results LSN 03-00803 of the 7 wipe samples. All samples were under 10 ug/100cm<sup>2</sup>, but in locations 3, 4, & 5 low levels were detected. EH&S

Manager S. Wong e-mailed Barry Cohen with results for review. Barry Cohen suggested another layer of coating.

02/18/03

Enecon came back in and applied another coating of encapsulating epoxy.

02/21/03

Chem Lab Tech L. DeSantis #51628 came in to take 3 wipe samples from trench. They were locations 3, 4, &5 where the traces of PCB very detected.

02/27/03

Received lab results LSN 03-01519 of the 3 wipe samples. All samples were under 10 ug/100cm<sup>2</sup>. EH&S Manager S. Wong e-mailed Barry Cohen with results

for review. Barry Cohen said that cleanup was complete. PCB labels were applied on the epoxy coated surface in the trench, and warning signs were applied to

the floor immediately adjacent to the trench.

Detailed Description:

INSPECTOR NOTES: 6/5/2002: Rodriguez called ERT Mike Daughtrey to request the additional sample results and the separator effluent sampling results. The results will be sent on 6/6/02.

Caller Remarks:

open connection on fuel oil piping. spill contained in a moat. con ed# 137423

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"  
Con Ed e2mis #137423:

06:00 hrs – Package boiler operator calls Shift Manager's office to report a fuel oil spill in the package boiler area.

06:10 hrs – On-duty Shift Manager (Allen), relieving Shift Manager (Etheridge), and acting Operations Manager (Granger) report to the scene of the spill to investigate. Approximately 60 gallons of #6 fuel oil have leaked onto the burner elevation floor and into the fuel oil heater moated area in the basement from the fuel oil piping at #5 package boiler. The source of the spill was recirculation piping on PB#5 fuel oil system that had an open end. A package boiler operator has already put a wood plug into the open end to the pipe to stop the leakage and spill clean-up equipment is being brought to the scene. (The open ended pipe was the discharge side of a relief valve on PB#5 fuel oil header. The relief valve was cut out and removed yesterday as part of a maintenance project to replace the old fuel oil meter with a new electronic meter.)

09:26 hrs – Allstate Power-Vac arrives on site and begins clean-up of all soiled areas using shovels, oil absorbent materials, wipes, and degreasers. All clean-up waste materials are placed in plastic garbage bags.

16:00 hrs – AllstatePower-Vac completes spill clean-up. All clean-up debris is placed into oily waste dumpster near T-11.

Investigation of this incident yielded the following:

On May 31st, during a full outage on the 74th Street package boilers, Station Maintenance and I&C were working on the replacement of the fuel oil meter for PB #5. The work scope of the project was modified because the spool piece assembly of the new fuel oil meter was longer than the spool piece of the old meter; this required that one of the relief / recirculation valves on the fuel oil line be relocated to allow for the additional length of the new meter. Prior to cutting through the pipe on the discharge side of the relief / recirculation valve, #6 oil was drained out of the recirculation line at a connection in the basement near the recirculation meter. When no more oil came out of the drain valve, the pipe on the discharge side of the relief/ recirculation valve was cut. Since no oil came out of any of the pipe connections for the remainder of the work shift after the old meter and relief / recirculation valve were removed, it was concluded that the isolations provided and the draining that was

performed were sufficient protection to work on the system. As this project required a fair amount of pipe fitting and welding, the work could not be finished in a single shift and was to resume the following morning. At 06:00 hrs the following morning (June 1st) an operator discovered the spill of approximately 60 gallons of #6 oil. The spill was completely contained on the concrete floor under the PB #5 fuel oil meter location and in the fuel oil heater moat in the basement. No oil entered any drain, sewer, or waterway. The chronology of the spill clean-up is already given above.

Investigation into the cause of the spill determined that a closed 3" valve on the bypass line around the fuel oil recirculation meter in the basement leaked through slowly, thus allowing fuel oil in the recirculation header (which has static head pressure on it due to the configuration of the piping system) to backfeed overnight through the piping and discharge from the open end of the pipe that had been connected to the discharge side of PB #5 relief / recirculation valve. Applying a wheel wrench to the bypass line valve handwheel, operators were able to get about an 1/8th of a turn on the valve. With this additional closure of the bypass line valve, no more oil came out of the recirculation line. As a corrective action measure as a result of the spill, temporary caps, plugs, or blind flanges will be installed on any open ends of oil system piping whenever people are not actively working on the system.

DEC Investigator Remarks:

5/4/00: Referred from O'Connell to Arakhan for follow up. Sam scheduled to make site visit with Vic Basso (Gas Ops) tomorrow.  
(JHO)

2/10/03: e-mail from O'Connell to Arakhan requesting info for closure:

"Sam:

Back in the Spring/Summer of 2000 I referred a number of gas condensate spills to you for follow up. I want to close them out, so I need some info from you.

2. 215 E. 68th St. – you were scheduled to make a site visit with Vic Basso on 5/5/00. That's all I have in our files. What was the outcome?"

Arakhan's response:

"Jane:

My memory and notes recall the following:

2. 5 E. 68th St. – I met Vic Basso @ 10:15 on 5/5 at the site. Investigation revealed that a boiler booster had ruptured its seal and released lubricating oil into the gas main. Cleanup and repairs were completed. No follow up needed."

e2mis no. 131–210:

Unknown liquid spilled on basement floor and on two non-company electricians. Unknown liquid came from gas flange spill contained on absorbant pads, also installed plastic around flange on gas pipe, chemist on location at 14:10 to take samples of liquid.

Basso reports that at 13:43 he interviewed Accard electrician Joe Desimone and that 2-weeks ago there was a leak on a gas

booster that he had worked on. On 5–3–00 electricians worked on the booster changing wires and conduits to the booster and that's when they found oil in the electric panel box, when they removed box they spilled app. 2–3 ozs. onto floor. Edward Algarin dismantled the booster and cleaned same, the rags that was used to clean this booster have been collected, but the clothes that he was wearing he had gotten some oil on them and he threw them out into dumpster.

5–04–00 Ed and Joe cleaned booster again and the rags are on site.

14:00 chem-lab Tony Rivera on location the oil that was collected was to be sampled for P.C.B., oil I.D. flashpoint total TCLP

less herb. and pest. There was not enough sample oil to do all that was requested so they are going to do P.C.B. and oil I.D.

15:15 Sam Arakhan from the N.Y.S/D.E.C. paged Basso who called him back and gave him an update. Sam will be out to the site on 5-5-00 at app. 10:30.

CHEM LAB SAMPLED PCB AND OIL. REMOVED TEMP PROBE DOWNSTREAM--NO OIL FOUND. HEAD OF SERVICE DRY. BOOSTER OUTLET HAS OIL FILM. REMOVED FLANGES FROM CHECK VALVES DOWNSTREAM, 2OZ OIL IN BASE OF VALVES.

5/5/00-0515AM-ID ANALYSIS SHOWS LESS THAN 1 PPM PCB'S -INDICATES AN OIL SIMILAR TO THAT OF GAS CONDENSATE.

UPDATE - May 12, 2000

GDS mechanic tapped 1/2" hole in drip leg between head of service valve and meter valve. Drip was dry. No evidence of liquid. GDS mechanic removed temperature control fitting. Inside of pipe was moist, but no liquids present. GDS mechanic checked plug at bottom of meter. Plug was moist but no liquids present. GDS mechanic took off blank flange at booster inlet. Oil present in pipe. Oil was soaked up with pads. Pipe was wiped clean from booster inlet back to tee section of check valve manifold.

UPDATE 05-24-00

On May 18th, Gary Windman, Environmental Coordinator met with representative (Joe Desimone) of Accardi Electric on location. Accardi Electric was in the process of repairing the electrical housing on the gas booster (location of gas leak forcing shutdown). Informed them that the oil which was found in pipe tested for lubricating oil and dielectric fluid #6. Advised to take precautions when cleaning piping and booster by wearing proper PPE. Also advised Accardi to open both check valves and wipe them dry.

Lab Sequence Number: 00-04690-001

Date Reported: 05/16/00

Sun#6 Cable Oil 100 %

Lubricating Oils 100 %

Petroleum Products/Dielectric Fluid - Sample contains lubricating oil and dielectric fluid. Therefore, there are similarities. Both lubricating oil (SAE#0) and dielectric fluid #6 are being reported.

5/24/00: Gary Windman received e-mail from Paul Mulqueen, Account Executive. Paul was informed by Rudin Management that repair and cleanup work has been completed at location. They are ready for gas.

**Caller Remarks:**

20 gallons of unknown liquid in a manhole. Smells like gasoline however. All contained to manhole.

**DEC Investigator Remarks:**

e2mis no 159653

L Morales # 74700 discovered 20 gallons of unknown liquid (possibly gasoline due to the strong odor) mixed with 10 gallons of water on the concrete floor of the sytructure. No sewer or waterway affected. Source and cause of spill are unknown. At this time there is no evidence of a release to a sewer however conduit plate 32-k-3 indicated that there is a sewer connection. No visual water movement. No substantial cracks observed. 3 liquid samples were taken by L Morales # 74700 1 for id, 1 for pcb and 1 for flashpoint on a priority e basis. Chain of custody # ee08710. Cleanup is pending lab results.

Update 7-11-05 @ 02:10. M Daughtrey # 88151 reports that the source of the spill was an mta bus Q60 that had a fuel spill in f/o 303 e 60 st and traveled down the block into our structure. The substance is known to be diesel fuel.

Update 7-11-05 02:30. M Daughtrey # 88151 reports that he located a witness to the spill from the bus. Witness name is Harry Esposito, he is the doorman for evansview building which is located @ 303 e 60 st. Mr . Esposito states that the spill occured @

05:50 on 7-10-05

Update 7-11-05 @ 03:40. R Castro # 88889 reports that there is also 1 pint diesel fuel mixed with dirt from the same source that was found in s11599 b/l 313-315 e 60 st. Conduit plate # 32- k-1 indicates no sewer connection in this structure. No sewer or waterways affected. No injuries and weather had no affect. No smoke or fire involved. 2 samples taken from this spill by R Castro #88889, 1 for pcb and 1 for flashpoint. Chain of custody # ee08711. Environmental yellow tag # 48598 applied. As per ert P Walsh, since the 2 spills are from the same source they can be combined in the same e2mis report.

7/11/05 08:08 Lab Sequence Number: 05-06797-001 < 1.0 ppm

7/11/05 08:24 Lab Sequence Number: 05-06797-002  
Flash Point, PMCC > 176 deg F D93-00/EPA 1010.

7/11/05 12:28 Lab Sequence Number: 05-06807-001  
Analysis indicates the presence of a substance similar to a light fuel oil.

Update 7-11-05 @ 09:51. Lab Sequence Number: 05-06798-001 < 1.0 ppm

7/12/05 08:34 E. Pearson # 50628 underground splicer called to report that at 04:00 manhole 11600 the cleanup was completed. the tanker removed 300 gallons of water & fuel oil the structure was double washed with BG 760 The spill tag # 48597 was removed. The cleanup was done by himself & his parner K. Williams # 00098. R. Castro was the supervisor # 88889. The cleanup will continue in servicebox -11599

7/12/05 13:46 O. Mcghie # 85993 reports that Allstate did the cleanup in service box 11599. They used a flush truck an removed all liquids & solids. As reported by Abdul at Allstate there was 20 gallons of water and 200 gallons of sludge. The structure was double washe with citrus cleaner The spill tag # 48597 was removed.

**Caller Remarks:**

ABANDONDED BOILER IS IN REAR OF ADDRESS SINCE DECEMBER AND IS CAUSING THE APT TO SMELL BAD COMPLAINTANT REFUSED TO GIVE HIS NAME AND ANY OTHER INFO

---

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

---

**The following DEC Investigator Remarks were available prior to 1/1/2002:**

DEC Sigona and DEC Rossan performed a PBS inspection on 4/10/2001, inresponse to a complaint over abandoned boiler. Found that boiler was abandoned causing minor petroleum odors. Requested that facility manager remove abandoned boiler. Inspection of the petroleum storage facility revealed that facility filed improperly registered 2,500 gallon tank as 1,500 gallon tank to avoid higher fees. Also, building owner encased aboveground tank inside sheetrock wall preventing required monthly inspections. Reported violations to NYC Buildings Department and Fire Department. Noticed fumes from boiler, which appeared to be emanating from backflow into boiler exhaust stack. DEC Sigona suspected that chiminey may not have bbeen cleaned during boiler replacement. Reported findings to DEP, who would send inspector to investigate. A follow-up letter was sent by DEC Rossan, and referral will be sent to DEC Legal Affairs.

## E2 MIS REPORT

4/03/00

Approximately 20 gallons unknown oil mixed with approx. 100-gallons water...very strong odor of gasoline. Unable to verify sump.  
No sewer connection as per conduit plate 32-K-2. Spill was found while working on FDR layout for future cable installation. PCB &  
ID sample taken...also ert states amount of spill is 56 gallons.

PCB 80 PPM LAB-RESULTS 00-03144 AROCLOR 1248

DATE AND TIME THE CLEANUP WAS COMPLETED : 04/05/00 , 05:30 AM.

CLEANUP PROCEDURE : OIL AND WATER REMOVED VIA TANKER, SHOVEL LEAD CONTAMINATED OILY MUD AND SOLID HAZARDOUS WASTE IN DRUMS. FLUSH  
OPERATION USED A HIGH PRESSURE HOSE TO DOUBLE WASHED THE WALL'S AND FLOOR WITH BIO-GENESIS SOLUTION (SLIX), MANHOLE WAS THEN  
RINSED BY FLUSH TRUCK.

SOURCE OF SPILL : OPEN PRIMARY CABLE END'S (DIELECTRIC FLUID)

REPAIRED : YES - BY PLACING THREE CONDUCTOR SHRINK CAPS AT THE OPEN ENDS.

**Caller Remarks:**

10 gal leaked on blue stone contained with pads and pigs oil samples will be taken not leaking now

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

Con Ed e2mis #125412:

6/8/99 Transformer #4 on fdr 38M31 leaking dielectric fluid. Approx 30gal spilled. 20gal on top of transformer, 10gal on bluestone. Gasket failure in A phase primary bushing. Probably due to increased nitrogen pressure in the transformer. High temp and heavy system load were probably a factor in increased pressure.

Maximo work order 22648 put in for repairs. Cleanup to continue tomorrow. Affected bluestone will be removed. Assuming 50–499ppm PCB.

LSN 99–05888, <1ppm PCB.

LSN 99–05957, <1ppm PCB.

Cleanup of oily bluestone completed on 6/9/99. An outage has been scheduled for 6/15/99 to perform repairs and cleanup. Absorbant booms and pads were placed to prevent oil accumulation from the top of the bank.

Repairs completed 5/9/00.

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

## DEC Notes:

6/3/03 During inspection, found repairs and cleanup had been completed. (KMF)

Con Ed e2mis #121032:

11/4/98 1030hrs

Station Operator found 3drops of pothead fill leaking from cap bank #2 onto steel plate. Pending outage.

11/9/98 Operator reports cleanup completed on 11/5/98 1330hrs. Samples were taken for PCBs.

Repaired by Maintenance Grp. Seal in the leaky pothead was tightened. Traces of material wiped clean using absorbant pads. Assumed 50–499ppm PCB. Cause was a defective seal on terminator. Found during routine inspection. Product is insulating fluid from the terminator.

LSN 98–12171, <1ppm PCB.

Caller Remarks:

UNKNOWN BY POTHEADS, ON BLUESTONE: NO TO 5 QUESTIONS CLEANING UP NOW:

DEC Investigator Remarks:

e2mis no. 152804:

4 oz. of dielectric fluid on the bluestone. He says it is leaking from a pothead associated with feeder 38M32. He waited there to see if more dripped down to determine a drip rate but no more dripped in that time, he thinks that the rain might have washed the fluid off the pothead & onto the ground. He will turn this in for repairs. He states that in is non-pcb. He will shovel up some of the bluestone & dirt around the effected area & put down pads.

At 10:00 Anderson shoveled up the oily bluestone & placed it into the drum for non-hazardous waste.

Update: 10/25/04, M. Pillig, 86856

Trans Ops employee Al Tallini, 34062 inspected FDR 38M32 on 10/02/04. No visible leak or sign of any oil. Pot head wiped down and was reinspected on 10/04/04. Again, no sign of any leak. Spill will be closed as of 15:00 HRS. on 10/04/04.

1 PINT CON ED NUMBER 146175

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"  
Con Ed e2mis #146105:

11/21/02

Brian Teehan #03177, Substation Operator, reported at 11:39 hrs. that he found at 11:00 hrs. approx. one pint of motor oil had spilled from a vehicle onto the bluestone in East 75th Street Substation, which is located at 525 East 75th Street. He was walking through the station yard when he discovered the spill. The motor oil leaked from an unknown vehicle that was parked. The vehicle is no longer in the station. The source of the spill is from an unknown vehicle and the cause is unknown. There was no fire or smoke involved and no sewer or waterway was affected. No injuries were related to the spill and no weather conditions contributed to the hazards of the spill. No private property affected. No samples taken since motor oil is a non-PCB substance. Cleanup of the spill was started at 11:10 hrs. by Brian Teehan #03177 and completed at 11:39 hrs. He used a shovel to pick up the oil stained bluestone.

## Caller Remarks:

NO SEWERS NO WATER WAYS AFFECTED SPILL WILL BE CLEANED UP IN THE MORNING.

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
 6/1/00 No free product. Discolored soil and odor.(JHO)

5/16/01 Construction project. Will inspect trenches when open. (KMF)

6/3/03 During substation inspection, spoke to contractor working on site when odor was detected. He explained that area has been reexcavated and nothing has been detected since the first incident. Contaminated soil was removed during construction. (KMF)

~~~~~

Con Ed e2mis #131666:

6/1/00 Contractor working on station property near battery room. Excavated dirt and found soil mixed with unknown oil about 5gal and approx 500lbs soil. Barricaded area and will take sample. Finder, G. Lang, reported he smelled kerosene.

Excavated soil pile is estimated as 2–3yrs.

Construction Mgmt and engineering are going to evaluate the need to continue digging for the test pit. If they need to proceed they will use 40hr trained individuals from Felix Construction. If additional soil excavation is required the soil will also be placed in covered piles. Construction Mgmt is requesting the following samples: BTEX, TPH, TLP Metals, PCB, Ignitability, Oil ID.

6/7/00 0448hrs

LSN 00–05373, <1ppm PCB

6/2/00 LSN 00–05374–001 Oil ID from soil pile indicates sample is similar to transformer oil.

6/8/00 LSN 00–05387–001, TPH 941ppm

6/8/00 LSN 00–05387–002, Flash Point >212 Deg F

TCLP analysis hits SW846 8260/624/1311

Barium 0.83ppm

Lead 0.14ppm

Selenium 0.052ppm

Silver 0.067ppm

6/12/00 LSN 00–05389, BTEX results

Xylenes 27.7ppb (total)

Toluene <1.71ppb

Benzene <2.45ppb

Ethylbenzene <2.2ppb

Test pit was lined with plastic and backfilled with clean fill. It is likely that this area will be reexcavated in the future.

6/16/2003

On Jun 3rd the following people inspected the substation;

NYSDEC: Kerry Foley, Sam Arakhan, Abraham Rodriguez

ConEd: Patrick Keelan, Joe Susco, Robert Sanchez

This spill incident was agreed by all to be cleaned up.

**Caller Remarks:**

con ed # ??? material is in man hole on the surface of water in man hole transformer in in man hole unk if water level is constant or not sample have been taken clean up pending lab results

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ"  
 Con Ed e2mis #141957 Notes:

In V-5087 found an un-diaper able unknown oil sheen on top of approx 50 Gal of Water. His first call was at 14:45, and at this time this desk suggested that he try oil pads. At 16:20 he reported that this was not working. CIG was called at 16:22 hrs spoke to Mr A.Natale #86017, and at this time he was informed that this clean up will be pending lab results, and the possible removal of Transformer in V-5087. Sump pump not working. Tag 27124 placed in vault. Samples taken for PCB, ID, and flash point.

Lab Sequence #02-02488-001 Flash point, pmcc > 140 deg F

Lab Sequence #02-02486-001 PCB 15 ppm

UPDATE: 3/26/02 @ 16:37 hrs.

Operating Supervisor inspected this vault today (3/26/02) and stated that a "Steam Jenny" is required to clean the vault in addition to the tanker & Vactor truck due to the chicken fat and cooking oil/grease in the vault.

Clean Harbors arrived on site on 5/24/02 and setup traffic control & confined space entry equipemnt. Crew removed one yard of solids with bucket & Cusco vehicle. They applied sodium hypochlorite detergent to walls & floor. This was rinsed with hot water, pressure washed and repeated. Walls & floor were washed again with Citri-Kleen solution. Cleanup completed at approx. 16:00 hrs.

TOTAL PCB 56 ppm

04/10/05 11:50

Lab Sequence Number: 05-03261-001

Oil Identification

-----  
Analysis indicates the presence of a substance similar to a light fuel oil.

Update : Due to the fact the oil ID came back as a light fuel oil, and no Flashpoint samples were taken, M54519 will be sampled for Flashpoint and this spill will be changed from a 24 DeMinimis to a spill, fuel oil.

04/10/05 12:00

D.Woods#21014, of the Underground, notified the control center on 04/10/05 at 12:00hrs. to report that a sample for Flashpoint was taken from M54519 and the new Chain of Custody foem number is #BB09598.

**DEC Investigator Remarks:**

03/06/06-Hiralkumar Patel. Spoke with Mr. Danny at Blair House Ass. as per him spill happened on solid concrete floor in property basement in boiler room while starting boiler. no cracks, no drain affected. not yet cleaned up. boiler has stopped and no more leaking. waiting to get boiler repaired. asked Mr. Danny to clean without waiting to get boiler fixed. Danny told me that it was around 1-2 gal of oil.

spoke with Mr. Jim Doyen, Super at building. he told me that there were 10-15 gal of oil spilled. all contained on concrete

floor. they sucked out with sand and speedy dry. still they are using sand to remove more oil from stain on floor as it was # 6 oil. no odor complaints in building. all cleaned up. case closed.

**Caller Remarks:**

SAMPLES TAKEN–CLEAN UP PENDING LAB RESULTS– CON ED #12596

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

**The following DEC Investigator Remarks were available prior to 1/1/2002:**

con ed e2mis notes:

Found transformer leak 40 gals on concrete floor. Count .4 ppm

Transformer capacity is 285 gallons, historical sample show 10 ppm pcb. DEP requested immediate clean up duew to possibility of rain. Waiting for feeder to go out. Feeder is out. Crew is proceeding with cleanup. Photo in file. DEC and DEP are satisfied with cleanup and are going off location. Partial cleanup complete. Raymond Lo going off location. Tanker removed 260 gallons of oil from unit.

---

DEC Investigator Remarks:

159159. 6-13-05 @ 22:30. K Ferraro # 06749 reports that while working on and area outage on 57 st, he discovered 1 pint of unknown oil on top of 400 gallons of water in m53310 & m53311 (1 pint in each of the 2 structures, a total of 2 pints of oil and 800 gallons of water ) located at nwc e 57 st & 1 av, easterly & westerly structures. There was or is no smoke or fire involved. No sewer or waterway affected. No injuries and weather had no affect. Account # f3445 is being used for this incident. No measuring device was used to determine the amount of the spill. Source and cause of spill are unknown. Environmental yellow tag # 38771 was applied to m53310 & tag # 38773 was applied to m53311. Water is standing. No visual water movement. No sewer connection as per conduit palte 31-k-3. No substantial cracks observed. Access anytime. 2 liquid samples were taken from each structure, 1 for id and 1 for pcb. Chain of custody # cc13065. Sample priority "e". Oil absorbent pads were applied to the spill. Cleanup is in progress at this time. Incident is classified as a 24 hour deminimus spill. J Moran # 01182

Update 6-14-05 @ 19:10. G Pearson # 50628 reports that the cleanup in m53310 is complete as of now. 4 barrells of ppe and debris generated from the cleanup. 315 gallons of oil and water mixed removed by tanker. Double washed with bio-gen and flushed all liquid removed by tanker. Cleanup crew and supervisor are listed in the event involved person screen. M53311 has multiple secondary burnouts and the cleanup can not be done until the structure is safe. J Moran # 01182

The environmental desk has made a decision to change the classification of this incident to " oil unknown type" due to the fact of the burnouts in the second structure. J Moran #01182  
CIG T Marcinek # 87549 notified @ 9:25. J Moran # 01182.

Update: June 15,2005 @ 11:00 hrs the following information is from voided incident 159201 as per ERT Andrew Fiore.#87976. Albert Munro 13615 O.S District 2 Underground on June 15,2005 @ 10:00 hrs Has discovered that in process to entering MH53310, that approx. one gallon of unknown oil and approx 1 gallon of has leached from adjacent MH53311 back into the above manhole that has just been cleaned. The reason he was entering this structure was to do a cut and rack job. He also reports that the source of this spill is from MH53311, and at this time due to secondary Burnouts are not able to complete clean up until emergency troubleman can make repairs. However, a tanker and cleanup crew are on location and at this time are in process of pumping unknown oil from MH53310. ( Over 50 tanker) And after repairs are made in adjacent manhole both structures will have to be cleaned at the same time.

There was no fire or smoke involved and no sewer or waterway was affected. There were no injuries related to the spill and no weather conditions contributed to the hazards of the spill. No private property was affected. The source of the spill is adjacent

manhole. There is no oil filled equipment in the structure. There is standing water and no substantial cracks. No sewer connection. Samples taken PCB & ID Chain of Custody # DD09516, Acct #12018, Yellow tag to be hung and will call back with information.

Update 6-15-05 @ 18:25. A munro reports that the cleanup is complete as of 18:25. 8 barrels of ppe and debris generated from the cleanup. 415 gallons of oil and water mixed removed by tanker. Double washed with bio-gen and flushed. Tags are to remain in place pending lab results. Cleanup supervisor and crew are listed in the event involved person screen. All employees are listed except for S Walsh # 02623 who is not in the data base. Source of spill was not observed during the cleanup.

Update 6-15-05 @ 20:03. Lab Sequence Number: 05-05774-001.  
no oil extracted for analysis from sample  
Lab Sequence Number: 05-05762-001  
no oil extracted for analysis from sample

Update 6-16-05 @ 00:08. Lab Sequence Number: 05-05761-001 TOTAL PCB 19 ppm

6-16-05 @ 01:35; As per A Drummings # 84163. Due to sample results of 19 ppm pcb from m53310, this incident can now be closed. The source of the spill was m 53311 and migrated to m 53310. The original samples that were taken on 6-13-05 are now missing (as per the chem lab). All repairs to cable have been made and the original source of the oil is unknown at this time. Both structures are now clean.....J Moran # 01182  
\*\*

Update 6-16-05 @ 02:40  
P Murphy # 00010 reports that from m53310 & from m53311 2 tags were removed, the #'s are 47214 & 38773. J Moran # 1182

Closed. 8-23-05. George Breen

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
e2mis no. 131949:

1 pint of unknown oil on 10 gals.of water in mh-53311. there is no sewer connections. Clean up pending lab results.

Lab-Seq# 00-05999 PCB 31 ppm

DATE AND TIME THE CLEANUP WAS COMPLETED: JUNE.21,2000, 20:30.

CLEANUP PROCEDURE: OIL AND WATER REMOVED VIA TANKER UNDER 50 PPM, FLUSH TRUCK FROM ENVIRONMENT OPERATIONS USED A HIGH PRESSURE HOSE TO DOUBLE WASHED THE FLOOR AND WALL'S WITH BIO-GENESIS SOLUTION (SLIX) , MANHOLE WAS THEN RINSED BY FLUSH OPERATION.

**Caller Remarks:**

oil is coming from ground and jerry believes it id from old abandoned oil line; are appling absorbant;

**DEC Investigator Remarks:**

05/09/07–Hiralkumar Patel. visited site on 05/08/07. met Hal Schneider and Jerry at site. found oil coming out from ground at entrance of tunnel, that runs from hospital to river. oil stians found on tunnel wall. there is old supply line runs through tunnel (aboveground) which was in use about 30 years ago, where barge used to deliver #6 oil to hospital. currently site has multiple #6 oil tanks.

Hal Schneider  
 Assistant Director  
 Coler Goldwater  
 900 Main Street  
 Roosevelt Island, NY 10044  
 PH. (212) 848-6747  
 FAX (212) 848-6708  
 Email: Hal.Schneider@nychhc.org

Jerry mentioned that there is an open spill case at site related to tank area. spill #: 0503272.

as per Jerry, there is no soil/groundwater data available in area between tank location and current oil seepage area.

05/10/07–Hiralkumar Patel.

multiple spill cases reported at this site:

1. 9704152: 1000 gal #6 oil spill. fuel oil heater malfunctioned. case closed without notes
2. 9714121: 100 gal #6 oil spill. loose hose during delivery. case closed without notes
3. 9800215: tank test failure for diesel tank. case closed as tank has closed. "no investigation done"
4. 9908536: mercury spill. case closed
5. 0303638: found contaminated soil at fill port. case closed.
6. 0503272: oil leaked from leaking fill line. DEC Leszek working on case

discussed with DEC Austin. after his approval, case #: 0503272 has administratively closed and will be investigated under current case #: 0701429.

found closure report for case #: 0303638. abstract: <-----

- found contaminated soil under fuel oil fill container
- excavated 64 cubic ft (4\*4\*4 ft) area and removed contaminated materials
- existing monitoring wells were monitored for contamination (no site specific groundwater flow direction available, could have monitored wells on upgradient side !!!!!)
- no endpoint samples

got following documents from DEC Leszek, submitted by Warren & Panzer Engineers:

- work plan, dated April 27, 2006.
- Groundwater Investigation report, dated May 2006
- Phase II investigation report, dated April 6, 2007

MOSF #: 2–2640

site has following tanks on-site:

1. seven 50,000 gal #6 oil USTs
2. five 25,000 gal #6 oil USTs
3. one 5,000 gal diesel UST
4. one 2,500 gal diesel UST
5. four ASTs for different oil

abstract of Groundwater Investigation Report, dated May 2006:

- product was not detected in any of the on-site wells
- no VOCs or SVOCs found in groundwater samples
- groundwater was encountered at approx. 10–11 ft bg
- groundwater flows southeast as determined from groundwater level measurement

- four monitoring wells monitor the groundwater around the 12 #6 USTs (two wells on west side of tanks and two on north–west side of tanks)
- one monitoring well monitor the groundwater around one diesel UST

no wells/monitoring done on south / southeast side of tank, which is downgradient as per report.

abstract of Phase II report, dated April 6, 2007:

- total 8 soil borings were installed to a maximum depth of 30 ft bgs
- no appreciable amount of groundwater encountered in any of the soil borings
- collected seven soil samples from six borings

|       | -----boring termination----- | -----sampling-----                        |
|-------|------------------------------|-------------------------------------------|
|       | depth (ft)                   | depth (ft)                                |
| SB-1  | 6.0                          | 0-4                                       |
| SB-2  | 4.0                          | 0-4                                       |
| SB-3  | 9.0                          | 0-4                                       |
| SB-4  | 15.5                         | 8-12-----12-16 (at groundwater interface) |
| SB-5  | 11.0                         | 8-12 (strong odor)                        |
| SB-6  | 8.0                          | 4-8                                       |
| SB-7a | 1.0                          |                                           |
| SB-7b | 2.0                          |                                           |

- no samples collected from borings SB-7a and SB-7b (as hit refusal at 1 and 2 ft)
- no VOC contamination found in any soil sample
- SVOC contamination found in all soil samples, almost at same level except soil sample from SB-4 (SVOC contamination could be from backfill material as coal and coal ash found in some borings)
- five 25,000 gal USTs were tested by PTC
  - \* tank #7: tight tank only (no information about line test)
  - \* tank # 10: dry leak. entire tank was empty during tank test <-----
  - \* tank # 11: tight tank only (no information about line test)
- seven 50,000 gal USTs were tested with "tracer" method by Praxair

Bryan Shaw  
The Warren & Panzer Group  
Ph. (212) 922-0077  
Fax (212) 922-0630

sent email to Hal requiring following information:

1. detailed site map with locations of all current and previous USTs, ASTs with associated pipings
2. information on all existing in-service tanks (#6, diesel and any other tank)
3. information/investigation report on diesel tank which was reported leaking on 04/06/1998
4. site specific groundwater flow direction with well survey data

based on available documents from previous spill cases and site map, oil that found at tunnel entrance could be from previously leaked fill container which was replaced in 2003–2004. oil stain that found on tunnel wall, that wall is towards this fill container area. <-----

05/14/07–Hiralkumar Patel. visited site again. met Jerry at plant. walked inside tunnel and found multiple spots where oil seeping into tunnel. most oil leak found at tunnel entrance, which is close to fill container. fill line runs aboveground from fill container to tanks. found oil and contaminated speedy dry at container bottom. asked Jerry to clean this container bottom and to check for reason of having oil at container bottom as fill box is contained.

found another spot where oil leaking into basement. this corner is close to tank #1 and about 30 ft south of tunnel entrance. asked Jerry to powerwash entire area in basement where oil stains and product is.

Jerry mentioned that Spill #: 0503272 was reported after tank test failure. they found line leak for tank #7. lines has been removed. asked Jerry for endpoint soil samples from line excavation area. tank # 10 was failed due to leak in elbow on tank. and tank # 11 was passed and never had any problem.

about diesel tank, which was reported leaking (spill #: 9800215). Jerry mentioned that that tank was replace entirely with existing double wall fibre glass wall tank. asked Jerry to submit closure report on diesel tank removal.

about leaking fill container in past: Jerry mentioned that after they excavated area of container, they found fill container was located between foundation wall, chimney foundation and bedrock and as per Jerry, area was contained by these three and as per Jerry, DEC Zhao visited site and confirmed this before closing the case.

summary:

- PTC will powerwash tunnel wall.
- Warren & Panzer will survey all existing wells to find out site-specific groundwater flow direction
- will take soil samples: one at tunnel entrance inside basement, one outside building close to fill container atleast to depth of tunnel bottom, one outside building on other side of tunnel (away from fill container area) atleast to depth of tunnel bottom and one in corner south of tunnel entrance where found oil.
- will submit diesel tank closure report
- will take endpoint samples from line excavation area for tank # 7

05/21/07–Hiralkumar Patel. received message from Jerry (Cell: 917–416–3305). they took endpoint samples from tank #7 line excavation.

05/31/07–Hiralkumar Patel. left message for Jerry.

06/01/07–Hiralkumar Patel. received message from Jerry. they cleaned fill container (as found oil on container bottom), took soil samples (as requested during last visit around tunnel and oil stain area) and groundwater flow direction. Jerry is waiting for results.

07/23/07–Hiralkumar Patel. received supplemental Phase II report from Warren & Panzer. they collected three soil samples from line area of tank #7. no contamination found in any samples. (see report on E-docs at case #: 0503272).

spoke with Jerry. asked him to submit investigation report for area where oil found with groundwater and groundwater flow direction data. he will call back.

07/24/07–Hiralkumar Patel. received fax from Mark from PTC with analytical data for four soil samples. fax doesn't included site map with sampling locations.

spoke with Jerry and asked him to submit site map with sampling locations. he mentioned that they haven't done any sampling in basement as he was under the impression the DEC will visit site again with marine personnel to evaluate situation (any flood condition from sampling). told Jerry that he has to get his consultant for such evaluation and asked him to take samples from these area in basement, as required during site visit.

09/06/07–Hiralkumar Patel. spoke with Jerry. he will call PTC to submit site map for last sampling event. they are also in process of signing contract with another company for proper cleanup. Jerry will call back on 09/10/07 with more details once he reach to office.

10/11/07–Hiralkumar Patel. left message for Jerry.

10/15/07–Hiralkumar Patel. received message from Jerry. they are still processing paperwork to start work. he will call once they done with paperwork and schedule a work.

11/30/07–Hiralkumar Patel. left message for Jerry.

12/04/07–Hiralkumar Patel. received email from Jerry. they are currently reviewing draft investigation report and once get approval, will submit to DEC.

12/13/07–Hiralkumar Patel. received Phase II report from Warren & Panzer. abstract:

- total of seven soil borings were installed around the vicinity of the utility tunnel
- four borings were installed outside of building on either side of tunnel
- three borings were installed inside the building
- all outside borings went down to depth of 8 ft below surface except boring #1, in which refusal was encountered
- inside borings were advanced just below the concrete slab and groundwater began to percolate into the basement, the borehole was immediately sealed and no samples were taken
- four soil samples were taken, from outside of building
- no contamination found in samples

based on following, they aksing to close the case:

- everyday monitoring of area and cleanup, if found any oil
- no soil contamination around tunnel
- it is #6 oil
- no VOCs and SVOCs found in groundwater samples from existing wells on-site
- recovery well inside basement is not possible, as could cause flooding

case could not be closed based on following:

- no samples taken inside building

- don't know depth of water level
- no monitoring well east of current fill port

spoke with Chet Bijoor (212-922-0077). asked him to provide depth of water in area of fill port. if water table is around 8 ft, then soil samples taken from outside of building (at 8 ft) would be considered otherwise, need to take soil samples at soil-water interface. asked Chet to install monitoring well in close proximity of current fill port and monitoring of that.

12/31/07-Hiralkumar Patel. received email from Mr. Bijoor. they found basement floor at 8 ft depth. they measured water table in existing wells and found groundwater at 16 ft bg, but the grade at the top of the monitoring wells is approx. 6 ft above the grade in front of the fuel oil fill port. therefore, depth to water table at fill port area is approx. 10 ft bg and soil samples were collected from borings at a depth of 8 ft, almost at water table. (so no further soil sampling needed). as required earlier, Mr. Bijoor proposing two wells down to approx. 15 ft below the ground surface or five feet into the water table. these wells will be installed on each side of tunnel, close to fill port and to the east of fill port. will submit groundwater investigation report.

Chaitanya (Chet) Bijoor, P.E., DEE  
Vice President & Chief Environmental Engineer  
Warren & Panzer Engineers, P.C.  
Ph. (212) 922-0077  
Fax (212) 922-0630  
email: cbijoor@warrenpanzer.com

01/03/08-Hiralkumar Patel. sent email to Mr. Bijoor approving well locations. asked him to provide work schedule. also asked Mr. Bijoor to include basement depth and previous boring depths in next report.

03/18/08-Hiralkumar Patel. received call from Brian. they tried to install well on north side of tunnel, towards East river.

visited site. met Brian. they were installing well on south side of tunnel, towards East river, near active fill box. went to basement and tunnel. found two more locations inside tunnel where oil/water seeping thorough floor.

07/14/08-Hiralkumar Patel. spoke with Mr. Bijoor at Warren & Panzer. he mentioned that investigation report is ready and currently under review by hospital.

left message for Jerry at hospital to submit report.

07/16/08-Hiralkumar Patel. received spill closure report from Warren & Panzer. abstract:

- installed monitoring well to a depth of approx. 11 ft bg where refusal encountered
- well was screened from 6 ft to 11 ft bg
- prior to sampling, the water was purged for only one volume (possibly due to low recovery) <-----
- no contamination found in groundwater sample

summary:

Warren & Panzer investigated soil along fill line for tank #7 which is being use to store #6 oil and as per report, this tank was

failed during tank test in 2005 (spill #: 0503272). but spill was reported for tank test for #2 oil tank. as per MOSF record, site doesn't have any #2 oil tank. so spill #: 0503272 might be reported to tank test failure for #6 oil. contractor took three soil samples along fill line for tank #7 and found clean soil.

spoke with DEC Jacob. he mentioned that each MOSF facility has true groundwater monitoring wells around tank field for purpose of monitoring which serve purpose of leak detection system also. DEC Leszek inspected the site and didn't find free product or sheen in any monitoring wells around tank field.

spill #: 0701429 was reported as found oil like #6 at the entrance of old utility tunnel. as per Jerry from building maintenance, they used to get #6 oil delivery from barge through fill lines which were running through/under tunnel and these lines might have leaked back in days. spill was reported as found about 2 gal of oil seeping through floor of tunnel at multiple spots. as per report from Warren & Panzer, "...large portion of utility tunnel is built into rock, therefore whatever amount of fuel oil may have lost have been trapped in the soil around the immediate vicinity of tunnel. however, occasionally the oil percolates into the tunnel in trickles. its not possible to remove this trapped oil without jeopardizing the integrity of the tunnel and the boiler operations. any attempt to drill a recovery well in the tunnel can lead to a potential flooding of the boiler room. since the trapped oil immediately outside the tunnel walls is confined and does not migrate down gradient, but only trickles into the tunnel, it is suggested that an active monitoring program be implemented to inspect the tunnel on a daily basis to recover any oil as trickles down through the cracks in concrete."

based on following, case closed:

- no contamination in soil samples from boring around tunnel
- no contamination found in groundwater sample from well installed on east side of current fill port, between fill port and East river
- no contamination found in any soil samples during Phase II investigation done in April 2007 (SB-6 was close to tank #1, which is closest from tunnel entrance and no contamination found in sample from SB-6 and that tank was passed tank test on 10/01/06)
- no product or sheen observed in wells around tank field during MOSF inspection in 2007
- no excavation/recovery wells possible inside tunnel (due to flooding)

**Caller Remarks:**

LINE TEST FAILURE, THE LINE COMES FROM A 20,000 GALLON TANK. LINE IS BEING REPLACED, DRUMMING UP CONTAMINATION

---

## DEC Investigator Remarks:

Two tanks – filling one tank it entered a second tank – some sort of problem with fill lines.  
 PTC opened up the sidewalk and found contaminated soil. Area is being dug out and new fill box & lines will be installed. PTC will take pictures, take endpoint samples and will forward a closure report to Sharif Rahman.  
 05/18/06 Sharif Rahman– Left a messege for Mark Salamik(PTC) asking to send closure report to DEC.  
 05/31/06 Sharif Rahman– Rec'd closure report prepared by PTC. No 6 oil was leaking from one of the fill line that runs under sidewalk. The sidewalk was excavated and lines were exposed, contaminated soil was removed followed by end point sampling. Analytes were found to be below TAGM 4046. Photographs and waste disposal manifest were provided. NFA required.

**Caller Remarks:**

1 PINT ON 50GAL OF WATER – CONTAINED

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

Con Ed e2mis #133232 Notes:

9-6-00 1pt cable oil mixed with 50gal water. Source was uncapped ends in MH-45130. No sewer connection as per conduit plate 33-J-4. Found 3 conductor primary cable ends uncapped in the manhole. Sample were taken for PCB analysis and returned <1ppm. Double washed floor and walls with slix. Found cement sump and no sewer connection.

UPDATE: 2/22/02 @ 18:18 hrs.

Information pertaining to cleanup: Cable ends were capped. Repairs to feeder were completed.

**Caller Remarks:**

con ed was working in the area and found material at location--

asked the four questions and all were answered no

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
e2mis no. 131765:

unknown fluid (possibly transmission fluid) in mh-57311. 20 gallons of water mixed with 2 gallons of unknown fluid in the manhole. Conduit plates show no sewer connections.

LAB-RESULTS 00-05588 PCB &lt;1 PPM

lab-results 00-5593 in mh57311 oil identification analysis -indicates the sample is similar to a light fuel oil.

DATE AND TIME CLEANUP WAS COMPLETED: 06/12/00, 05:45.

CLEANUP PROCEDURE: OIL AND WATER REMOVED VIA TANKER UNDER 50 PPM, FLUSH TRUCK FROM ENVIRONMENT OPERATIONS USED A HIGH PRESSURE HOSE TO DOUBLE WASHED THE FLOOR AND WALL'S WITH BIO-GENESIS SOLUTION (SLIX), MANHOLE WAS THEN RINSED BY THE FLUSH TRUCK.

**Caller Remarks:**

1 PINT OF UNK OIL ON 100 GALLONS OF WATER - CLEAN UP PENDING LAB RESULTS - SAMPLES TAKEN - REF #130911

---

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
 e2MIS no. 130-911:

April 16, 2000 10:27 hrs.

Andre Sahai #18615 Maint. Services reports that on April 16, 2000 @ 10:22 hrs he found approx. 1 pint of an unknown oil mixed with approx. 100 gallons of water in mh-57310 @ 411 E 76 Street. There is no visual movement and undetermined if there is a sump or sewer connection and conduit plate 37-L-1 is not on record.

A PCB sample was taken. Attempted to cleanup as a sheen and was unable. The cleanup is pending Test Results.

4/18/00 05:46 Received lab results, lab sequence # 00-03723

Aroclor - none PCB - <1.00 PPM. Lab Analysis SA00-03788-001 indicates an oil similar to Cooking Oil.

DATE AND TIME THE CLEANUP WAS COMPLETED : 04/21/00 : 12:00. CLEANUP PROCEDURE : FLUSH TRUCK FROM FLUSH OPERATIONS USED A HIGH PRESSURE HOSE TO DOUBLE WASHED THE FLOOR AND WALLS WITH BIO- GENESIS SOLUTION (SLIX), MANHOLE WAS THEN RINSED BY FLUSH TRUCK.

## Caller Remarks:

Caller reports a fire on the bridge. Around 3000 lbs of Black Beauty abrasive burned. This abrasive contains lead based paint. This burned and some went onto the East River. L & L Painting Company has started the cleanup.

## DEC Investigator Remarks:

10/19/05-Vought-Called Mani and left message to return call. Spoke to Mani and spill was contained on bridge except for waste water. Previous samples has 017% lead and hence calculation of 5lb of lead. Air monitoring samples being collected. Water runoff from FDNY with small amounts of lead entered East River and sewer system. Cleanup was completed and two remaining platforms will be cleaned. Vought gave number of NYCDEP and USCG and Mani will notify them. Spill closed by Vought due to no impact to soil and minimal impact to East River (making recovery not feasible due to water velocity and temporal nature of spill).

1 qt unk oil in 400 gals of water in manhole

12175

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"  
E2MIS 121755

12/07/98 00:46 TATEKAWA REPORTS HE FOUND UNKNOWN 1PT OF OIL MIXED IN 400GAL'S OF WATER IN MH-45114 N/W/C E.64 ST 3 AVE. ITS CONTAINED,DID NOT ENTER ANY WATERWAY OR SEWER,DID NOT TAKE A SAMPLE OR HANG

A SIGN IS WAITING FOR FOREMAN AND THAN HE WILL TAKE SAMPLE AND HANG A SIGN. HE WAS WORKING ON DC ELEMINATION AND THERE IS PRIMARY CABLE IN THE MANHOLE

If this is a Con Edison manhole it contains electrical cable and splices. Many manholes have a sealed sump in the floor which is used to allow runoff when pumping the structure. A hose is place in this sump and water on the floor will flow into the sump

allowing the floor to be cleaned. If cleaned prior to analysis of the fluid, the structure will be cleaned as >50 PPM and all liquid and waste will be manifested accordingly. The structure will be double washed with a degreaser, i.e. Slix. All cleaning material and PPE will also be treated as >50. If any sludge is found within a manhole it is treated as lead contaminated and manifested accordingly. The spill identification tag will remain secured to the structure until the analysis is completed and if <500 PPM the signage will be removed. If the analysis is >499 PPM, a grid will be prepared for wipe testing the area. Until the analysis of the wipes are proven to be <10ugs/100cme2 all additional waste produced from the structure will be treated as the original analysis.

If this spill occurred in a transformer vault containing a sump pump and there was a possible release, the drainpipe trap will be dismantled to determine if oil was released. Sludge found in a vault, through historical analysis, has been determined not to contain lead.

12/07/98 02:12 P.MCGRATH REPORTS SAMPLE TAKEN AND HUNG SIGN#21887 IN MH45114

N/E/C E.64 ST 3 AVEAVE...SAMPLE IS FOR PCB

Analysis received SA98-13500 = Aroclor 1260 / PCB <1.00 PPM ...

12-8-98 07:45

Cleanup complete 12-8-98 at 0600 hours supervised by J.McCabe 00305. 500 gallons oily water removed via tanker, mh was then double washed. 2-55 gallon drums hazardous waste generated, picked up by corporate transportation. EPA#NYP004033056. Tag removed. Crew: J.Hinojosa 16383, L.Morales 74700, and S.Johnson 00394.

**Caller Remarks:**

A petro tech found a bucket in the sump pit with oil in the pit. Unknown how much might have leaked into the pit. Customer was notified.

**DEC Investigator Remarks:**

10/21/08–Vought–Called Evelyn Brown (914–997–6730) and left message to return call to Vought and DEC Ahmed responding to spill due to proximity to site from other separate site visit. Vought received call from Evelyn Brown (cell 516–652–7587) and she provided contact for onsite building engineer (Luis 646–239–9773).

10/21/2008–HRAHMED–Responded to the site. Noticed oil water mix in the sump near the boiler. Noticed pipes running from sewer and boiler to the sump. The oil water mix was contained in the sump. Luis called me later and told that he cleaned the sump and put the mix in a bucket. As per him there was no leak or crake in the sump. Talked to Evelyn and told her to hire somebody to clean up the site and dispose the oil water mix properly and send a letter report and disposal manifest.

10/31/11–Hiralkumar Patel. case transferred from DEC Hasan to DEC Patel.

case closed due to nature of the spill.

#### Caller Remarks:

Caller reporting oil is seeping from an unknown source into an excavation. Best access is on 77th between York Ave and FDR Dr– John Jay Park– John Jay Bathhouse

#### DEC Investigator Remarks:

04/16/10–Hiralkumar Patel.

1:00 PM:– visited site. met Nadia Jarrett, construction manager from NYC Parks dept. as per Ms. Jarrett, they are renovating on-site building and installing new elevator in the building. during installation of four concrete pillars for new elevator, found oil in one area. about 10 gal oil/water recovered till now. Ms. Jarrett mentioned that they found concrete and bedrock during excavation in three corners of new elevator area, but found backfill material (bricks etc.) in fourth corner which is closest to the boiler. no odors on basement. asked Ms. Jarrett to collect product sample for fingerprint and age analysis. found bedrock about 1 ft below basement floor. site had #2 oil UST which was removed recently as part of on-going renovation and will install another fiberglass tank in same location. as per on-site person, old tank was installed within bedrock and no contamination found after tank removed. it was direct fill and supply/return lines were running aboveground in basement. during site visit, found clean water in same excavation in other corner about 5 ft away from impacted area and this clean water area was between old tank and impacted area.

based on observations during the site visit (oil in only one area and bedrock found underneath it) and information provided (as no contamination after old tank removed), asked Ms. Jarrett to excavate more in impacted area to remove contaminated backfill. informed her that the department may require additional soil and/or groundwater investigation based on results of additional excavation.

Nadia Jarrett  
 Construction Manager  
 NYC Parks  
 Ph. (347) 386-2131  
 email: nadia.jarret@parks.nyc.gov

PBS #: 2-604971. as per PBS record, site has one 1,500 gal #2 oil UST.

as per PBS application filed on 03/22/10, Empire environmental removed one 1,500 gal UST and will install one 1,000 gal UST.

3:16 PM:- spoke with Carol Castania (718-714-6898) at Empire. they removed tank on 03/30/10 and no contamination in tank area. asked Carol to submit tank removal affidavit.

04/19/10-Hiralkumar Patel.

1:00 PM:- visited site. met Alex Tsakidis (718-309-5977), a general contractor from Jemco. they excavated area further and found small concrete pit (2 ft by 2 ft by 1 ft), which was filled with contaminated debris. found some water in pit with little oil. asked Alex to drill through concrete pit bottom to see any soil contamination under pit. Alex mentioned that they will do drilling tomorrow morning around 9 AM.

04/20/10-Hiralkumar Patel.

9:45 AM:- visited site. met James Malin from NYC Parks. contractor drilled two holes in concrete pit and found rock underneath the pit. no oily water coming up from holes. very minor oily water found in pit (as compared to about 4 gal oil found at first day). Mr. Malin gave copy of as-built plan from 1940 which shows that pit was old boiler sump and that was built on bedrock. as per Mr. Malin, new boiler was installed about 5 years ago.

James Malin

Caller Remarks:

contained – clean up has not begun – spill 122069.

---

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
E2MIS 122069

If this is a Con Edison manhole it contains electrical cable and splices. Many manholes have a sealed sump in the floor which is used to allow runoff when pumping the structure. A hose is place in this sump and water on the floor will flow into the sump allowing the floor to be cleaned. If cleaned prior to analysis of the fluid, the structure will be cleaned as >50 PPM and all liquid and waste will be manifested accordingly. The structure will be double washed with a degreaser, i.e. Slix. All cleaning material and PPE will also be treated as >50. If any sludge is found within a manhole it is treated as lead contaminated and manifested accordingly. The spill identification tag will remain secured to the structure until the analysis is completed and if <500 PPM the signage will be removed. If the analysis is >499 PPM, a grid will be prepared for wipe testing the area. Until the analysis of the wipes are proven to be <10ugs/100cme2 all additional waste produced from the structure will be treated as the original analysis.

If this spill occurred in a transformer vault containing a sump pump and there was a possible release, the drainpipe trap will be dismantled to determine if oil was released. Sludge found in a vault, through historical analysis, has been determined not to contain lead.

12/21/98...08:57 J.MCCABE #06470 REPORTS:

EMP. J.PELZER# 06470 WORKING ON DEAD FDR-24M87. FOUND APPROX. 300 GALLONS WATER AND APPROX. 1GALLON OF UNKNOWN FLUID, POSSIBLY DIESEL FUEL.. UPON ENTERING M.H 60281 ,N/S E 77 ST. 137FT. W/O YORK AVE.

**Caller Remarks:**

DURING TEST DRILLING ABOVE MATERIAL DISCOVERED. TEST WAS STOPPED.

DEC ON SITE. FOR ADDITIONAL INFO CONTACT DOMINICK DEGEORGIO

@ 718-706-2707.

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

1/18/00: During trenching operation to locate former MGP structures, contractor encountered free product at about 5' below grade.

Possible leak from No. 1 pipeline (Astoria to Ravenswood) related to pressure spike on 9/3/98. Called Barry Korman (Con Ed Steam Ops). He indicated line had been filled with #2 oil, then low-pour #6 oil. He will check with Con Ed legal to see who retains

responsibility for the line (property belongs to KeySpan).

1/19/00: Barry Korman called back – he spoke with Peter Thurlow (CE legal). KeySpan owns that portion of the pipeline on their property and all associate contamination. According to Korman, the person in charge at Con Ed was Sal Bacuzzi – pressure was increased from valve at street towards Astoria. There was no pressure spike from the valve box to Ravenswood. Pipeline was cut and capped just inside Ravenswood property boundary.

1/19/00, 10:14 AM: called Pat Van Rossem (KeySpan) – told him that Con Ed interprets contract to read contamination is KeySpan's problem. Pat has checked drawings – there is also a pipeline to 74th St. Generating Station in that area that is still active. I asked him to check with 74th Street – have they experienced a pressure drop? Is there any way of detecting a leak on the active line? His drawings also show that the Astoria pipeline is encased in concrete in the area of the trench.

3/27/03: CLOSE OUT – TRACK UNDER SPILL # 0108018 (JHO)

4 oz unk oil on 100 gal of water in manhole – samples taken and

clean up pending results – con ed 128586

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

Con Ed e2mis #128586:

10/22/99 1105hrs

Substation operator reports finding 4oz unknown oil on top of 100gal water in station MH16422 while telephone company employees were going into it to do work. MH has only telephone cables in it. Appears to be contained at this time. Cleanup pending oil sample results.

4/19/00 1130hrs

Oil in manhole non-detect for PCB as per LSN 00-03407. Bklyn/Qns Environmental Operations will respond to pump out manhole.

UPDATE 02/9/04 1530 Hours

This is a returned closeout request from the NYSDEC. BKLYN/QNS Env Ops responded to the incident on 4/20/04. The hole was pumped out, double washed and waste removed by a vactor on 4/20/00 and cleaned up complete at 1600 hours. Bklyn/Qns Env Ops estimates that between 200–300 gallons of water was removed. There is no repair associated with this manhole since it was found in a telephone company manhole with no Con Ed equipment associated with it.

500 gallons of water in a manhole being treated 50 to 499 but appears to be just water – sample sent out and will be pumped into tanker

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
CON ED E2MIS NOTES 6-01-99

Found 500 gals. unknown liquid in hole. Treating as 50-499 due to feeder outage. No sewers or waterways affected. Tag #20500 installed.

5-30-99 0531hrs.

Original incident report was input wrong. Shift Mgr. Artie Patterson, ravenwood gave Mr. Jacobi flush supervisor and B/Q shift Mgr. J. McBride misleading information that at 0303am no incident report as needed as per environmental mgr. Dominici DeGeorgio. Hole was then pumped out at 0345am. D. Georgio arrived on location and called ERT, they were then told to make out incident. Sample was taken from water remained in the hole.

Lab Seq#99-05609 6ppm

UPDATE - 6/10/99 - ENVIR OPS SUPV R. HUTCHINSON REPORTS CLEANUP COMPLETE AND ENV TAG # 20500 REMOVED.

#### Caller Remarks:

4 OUNCES OF UNK OIL IN AN EXCAVATION – NEAR EAST WALL AT 38TH AVE GATE – SAMPLE TO BE TAKEN – CLEANUP IN PROGRESS

5/25/99 – met with Georgia Fairweather (Con ed Const. Mgmt) – excavation is on generating station property near 38th St. gate for installation of metering equipment. they encountered some contaminated soil. Soil was drummed, sampled for disposal. No sample was taken for oil ID. The excavation is plated over until Tues. 6/1, when excavation will be completed. I requested Chem Lab to be on-site at that time to collect sample for oil ID. (JHO)

6/1/99, 1:45 PM – met at site with G. Fairweather. She said Chem Lab had been on site earlier but didn't collect samples because they didn't know what parameters they were analyzing for. Will call Pat Keelan to confirm oil ID analysis. (JHO)

7/28/99: sample results e-mailed to me by ERTs.

7/25/06 – cross-reference to spill no. 9411975 and 0504119. Close out. (JHO)

#### DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

5/21/99 spoke with Dominick DiGiorgio, Con Ed Env. Manager. He believes samples were only collected for TPH, PCB and TCLP hazardous waste determination. Excavation is plated, but not backfilled. Called ERT and requested copy of e2mis report. (JHO)

5/25/99 on site with Georgia Fairweather, Construction manager. Excavation is on generating station property near 38th Avenue gate for installation of water metering equipment. They encountered some contaminated soil. Soil was drummed, and sampled for disposal. No sample was taken for oil ID. Excavation is plated over until Tues 6/1, when excavation will be completed. They will

arrange for Chem Lab to be on site to collect sample for oil ID. (JHO)

6/1/99, 1:45 pm – on site. Met with G. Fairweather, who said that Chem Lab tech had been on site earlier, but didn't collect sample because they didn't know what parameters they were analyzing for. Have to call Pat Keelan at Chem Lab to confirm oil ID analysis. (JHO)

7/21/99: e-mail to ERTS requesting lab results. (JHO)

7/28/99 – results received for TCLP waste characterization only. (JHO)

9/1/99 – second e-mail request to ERTs:

"Following requests were originally made on 7/21/99:

1. Con Ed #124-930, DEC #9901825, 5/17/99 – Ravenswood Generating Station. During excavation for installation of new metering for the divestiture contaminated soil was discovered along the east wall of the complex near the 38th Ave. entrance gate. The Department requested samples for oil ID. Have samples been collected for analysis? Specify the sampled medium and the analysis being performed. If analyses are complete, please forward results and an updated e2MIS report." (JHO)

9/2/99 – response from Pat Keelan and ERTs that "oil ID analysis was not requested and arrangements were never made to have the samples taken for ID. If the material is still there we can take the samples anytime." (JHO)

11/7/99 – following additional requests for clarification from Con Ed, received the following e-mail from Dave Perez (Con Ed ERT): "The oil ID analysis was never requested by Ravenswood station and therefore it was never performed by the Chem Lab. This was indicated in Pat Keelan's [e-mail]....dated September 2, 1999. Your first request for information, received on July 21, 1999 arrived subsequent to the sale of the station. The closing date of the sale was July 18, 1999. Even if the material is still present on the site, since this is no longer Con Edison property, we cannot get a sample. I apologize for the initial confusion, for the delayed response and any inconvenience this may have caused..." (JHO)

7/26/06 – close out and cross-reference to spill #'s 9411975 and 0504119. (JHO)

**Caller Remarks:**

CALLER REPORTING DISCHARGE FROM SUMP PIT WENT INTO CITY SEWERS. AFTER BEING TESTED, POSITIVE RESULTS FROM PCB'S WERE FOUND.

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

**DEC Notes:**

PIT HAS OPENED BOTTOM; SAMPLE TAKEN. DEP ON SITE FOUND CONNECTION TO SEWER IN SUMP .74 PPB- PCB'S (MAY BE SEDIMENT), SEWER LIMIT IS .1 PPB. AREA ROPED OFF DRUM WILL BE SET UP TO ACCUMULATE WATER & TREAT AS HAZARDOUS.

e2mis no. 122-005:

Sump pit and corresponding pump exists in the tool room which discharges to NYC sanitary sewer. Review has determined that the pit has an open bottom and fills with both rain water that enters the tool room from under a roll-up door and groundwater. Sample was taken to determine if the water meets NYC sewer limits.

12/17/98 PCB results received 0.74 ppb, limit is 0.1 ppb. Area roped off and power to the pump disconnected. A drum will be set

up to accumulate and will be handled as PCB. No auto pumping will be done. Amount of water pumped is unknown, sump pump has been in place for more than 10 years. NYCDEP rep Carlos Twano on site to view location of sump pit. He was given a copy of the analysis results showing 0.74 ppb of PCBs. Mr. Twano indicated that he didn't feel the results are a problem since they are less than 1 ppm, but that he would check with his supervisor.

1/7/99: Updated results received on a new sample indicating 0.31 ppb of PCBs and 3.4 ppm TPH. Requesting clean up contractor to clean the sump pit area since there might be contamination of the concrete.

1/15/99: Faxed all analyses results to Twano of the NYCDEP as requested. No further action requested.

**DEC Notes:**

9/24/98 1441hrs

ERT Bernice Jones– 300gal into moat. Used oil coming from fans inside the plant. Notes in field book. (CAE)

9/25/98 1855hrs

ERT Dave Perez– found hole in tank. Oil spilled in moat. (CAE)

9/23/98 Notes from Chris Engelhardt's field book: On location at 1505hrs. Ravenswood Generating Station. Wayne McKinley–Operations Manager (718) 706-2706. Dave Torres–General Watch Supervisor (718) 706-2753.

Oil discovered in moat today by workers checking vibration on fans (Mr Robert Bishop (718-706-2748)). Source unknown. Tanks don't appear to be leaking but could be leaking at very bottom that can't been seen due to angle. Tanks hold oil waste lube oil from operating equipment (fans, auxiliary equipment) 2gal-5gal per bearing. The oil is drained into carts which is drained into tanks before disposing of oil. Normal procedure to check oil for PCBs before disposal.

Inspected tank and surrounding area. Oil had greenish hue. Observed green salts on top of NW tank and on some of piping above the tank. This comes from when they wash the air preheater for combustion. They do the washes with city water. No oil was observed on top of tank or on adjacent walls or on nearby equipment. Went to next level above tank. Saw no splattered oil. Only equipment that leaked oily was pump which sits in moat. This pump is innactive and used to pump oil to boilers to burn. Sampled oil. Instructed him to send to outside lab. OK to split.

Called Clean Venture at 3:00. Expect to be on scene by 5:00. Will treat as hazardous and store on site until results return. (CAE)

3/5/03: transferred from Engelhardt to O'Connell.

4/8/08: review of e2mis report shows that source was leak from tank at cradle. Repaired prior to sale of facility to KeySpan. Close. (JHO)

-----  
Caller Remarks:TEST BORING BEING DONE. POSS OIL CONTAMINATION FOUND IN THE GROUND WATER. AMOUNT OF OIL AND WATER IS ABOUT 1 PINT  
-----

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
Test borings SP-2 and SP-3 at Gas Turbine site.

9/15/98: Contamination found while installing SP-2 and SP-3 borings downgradient of the kerosene tank, between the moat wall and gas turbine units. Dom DiGiorgio thinks it is same #6 oil seen approx. 50' down gradient during installation of oil-water separator unit (3/1/95 - spill # 9415584). On first day there was not enough oil to sample for ID, so they are taking sample today. DiGiorgio has a Sanborn map from 1939 which shows "#5" oil tanks in the vicinity of the oil-water separator.

- There are globs of oil in SP-3 - not enough to take a sample. I told Mariela Gonzalez to install a monitoring well to see if free product will collect in it.

- SP-2 - no oil. Ground water sample was collected on Friday for VOC, SVOC, PCB.

- SPW-1A they are down about 4 feet - hit cobbles. May try to extend 1 more foot before bringing in rig to install MW. Proposal is to extend edges of current boring (currently about 2' x 2') to allow for clearance (depth) of 5' to allow drilling. (JHO)

11/18/02: Close out - cross-ref spill # 0030035. (JHO)

Caller Remarks:

FIRE BROKE OUT ON PT TRANSFORMER SPILLING TO BLUESTONE AND SOIL – TESTING NOW TO SEE WHETHER OR NOT IT IS PCB

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"  
 \*\*UPDATE PCB 131 PARTS PER MILLION\*\* PER STEVE ROMERO CON ED

3/16/98 – Engelhardt for follow-up visit

spill area about 210 ft x 30 ft. Con Ed has excavated several inches from this area plus about 2 feet from a 7 foot diameter area around the failed transformer. Spoke to Joe Susco (Env Eng. – substations – 718–830–7462) and Mike Bonanno )Station Manager – 718–204–4420). Told them to take some endpoint samples and showed them where to take them from.

3/24/98 – received endpoint sampling analyses. all results below 1 ppm Aroclor 1260 for soil , which was type of PCB in transformer.

E2MIS 115213

09–MAR–1998 @ 1105 HRS SUPV M.BONANNO #74907 REPORTS THAT OPERATOR A. ROTOLA #49961

FOUND ON SECT 5E "C" PHASE PT OIL LEAK DUE TO FAULT & FIRE.APPROXIMATELY 40 GALLONS. NON DEMINIMIS . HIT BLUESTONE.

CONTAINMENT TO BEGIN AFTER FIRE IS OUT AND EQUIPMENT IS ISOLATED. CHEM LAB REQUESTED FOR PCB COUNT.SHIFT MGR T.BRYAN

#95970 NOTIFIED.REPORT ENTERED BY E2MIS RHEIN #52639 . NO RELEASE TO SEWERS OR WATERWAYS.

ON 09–MAR–1998 18:45:00 CHEM. LAB. GAVE RESULTS ON

SAMPLES FOR OIL–POTHEAD BUS 5E AND THE RESULTS WERE 131 PPM

10–MAR–1999 11:15 DURING INSPECTION, SUPERVISOR MICHAEL BONANNO INDICATED AREA WHERE FIRE OCCURED AND THAT CLEANUP WAS

COMPLETED ON 09-MAR-1998 @ 19:00. HE ALSO SUPPLIED TEST RESULTS THAT INDICATE A PCB COUNT OF 131 PPM AS PER LSN 98-02590. THE PT WILL BE REPLACED, AND THERE IS NO CURRENT POTENTIAL FOR A LEAK SINCE ALL THE OIL WAS DRAINED.

## Caller Remarks:

boons are in place–oil asorbant pads ffound in river

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

11/25/97: Barge is permanently moored at Ravenswood Station. Responded to site with Brian Mitchell @ 3:15 PM. Also on site was Anthony Henry from DEP. According to Ray Cadmus (Environmental Engineer, Con Ed) Jerry Waller (shift supervisor) was doing a routine inspection and saw oil-soaked absorbent pads floating in the river near the barge. There was no source from the plant or the barge, according to Cadmus, as no work was being conducted on site that day. S&D Contractors arrived within 20 minutes and picked up pads. When we went to the dock, we saw no sheen or pads in water.

11/26/97: Bill Murphy from Con Ed called to confirm that S&D performed cleanup.

**Caller Remarks:**

CON ED NEEDS TO SPEAK WITH REP TONIGHT. CON ED WANTS TO RUN PUMPS

AT RAVENSWOOD STATION. AND NEED TO GET PERMISSION FROM DEC..

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

9/2/97: SPOKE WITH TIBBE (PRIMARY) – SEAWATER USED TO COOL TURBINE HEADS. ONE OF HEADS SPRUNG A LEAK & FLOODED BASEMENT. TIBBE SPOKE WITH GLENN NEWELL (CON ED ERT), WHO SAID THERE WAS NO VISIBLE PRODUCT OR SHEEN, AND NO EXPECTED DISSOLVED CONTAMINATION, BUT CON ED NEEDS DEC PERMISSION TO PUMP OUT THE BASEMENT USING THE SUMP PUMPS. TIBBE TOLD THEM O.K., BUT GRAB A SAMPLE.

10/30/97: CALLED CON ED ERT TO FIND OUT RESULTS OF SAMPLE ANALYSIS. BERNICE JONES SAID THAT NO SAMPLE WAS TAKEN. SHE SAID THAT CON ED'S NOTES INDICATE THAT DEC REPRESENTATIVE TOLD THEM THEY DID NOT NEED A SAMPLE.

10/30/97: CALLED MARK TIBBE (OFF-HOURS RESPONDER) – HE SAID THAT HE DEFINITELY TOLD CON ED TO COLLECT A SAMPLE. HE WILL FAX HIS NOTES ON THE SPILL TO ME.

12/9/97: REFERRED TO BRIAN MITCHELL, DEC WATER UNIT FOR FOLLOW UP, POSSIBLE ENFORCEMENT.

#### Caller Remarks:

they have a leak coming from a wall from an unknown source.unknown what the material is.the spill is 4 ounces so far.

#### DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

#### ~~~~~ CON ED E2MIS NOTES

At Rainey Oil Farm, there is an existing crack that after heavy rains sometimes leaks water and a oily appearing substance. Estimate approx. 4oz. of this mixture contained on pads on concrete floor. Floor drain next to wall drains to "D" tunnel which pumps to oily water seperator at Rainey. If any oil drained into into drain line it would go to seperator before discharging to river.

Inspector was not notified at the time he visited the spill that the drain was hooked up to the internal system, so his notifications were made based on the storm sewers only. Oily water leaked through ...was caused by heavy rains raising the water table and any othe contaminants at the same time and leaked through the wall.

---

**Caller Remarks:**

a turbine leaked oil and created a sheen on the ast river in the arae of the generation plant – booms are in place on the water to absorb and contain the oil

---

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"  
COAST GUARD AND WOULD LIKE A DEC RESPONSE TO THE SCENE

Engelhardt notes: Al Webb, Pete Piniero (USCG), Dom DiGiorgio (Con Ed). Report of sheen in discharge tunnel – spotted by Con Ed (Ed Gallagher). Con Ed deployed soft boom. Source of sheen not found – sheen stopped. Sheen first observed 10' in diameter, eventually got to 25'. USCG arrived at 1020 hrs, but sheen had dissipated. Develop specific response plans when sheen is observed in outfalls with specific checklist for sources of oil. Sheen alarm did not go off.

Source eventually identified as plug in line from no. 20 demister to the bowser. Resulted in oil backing up in the vapor line to the roof and then entering the roof drain which discharges to the river. Line was cleared.

**Caller Remarks:**

unk amount of unk oil leaked into storm drain and eventually into

east river

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

3/26/96, Engelhardt notes: Received call from Dom Digiorgio (Ravenswood) re: sheen coming from sewer near steam house. This has been ongoing problem for about 1 year.

Weather sunny, ~60 degrees, slight breeze from east. No rain yesterday or today.

NYCDEP arrived and checked regulator on GT side of fence. Regulator is operational. Sheen can be observed in river. Contained with sausage boom. Con Ed has made attempts to collect and analyze oil in past but the results are inconclusive. According to Dom Digiorio, the tunnel head house separator and the steam house drain both feed to the outfall. There was sheen on water near regulator on river side of it. Dropped bucket into regulator – no sheen observed on water in bucket.

Tony Faiello, DEP – checked both regulators (RBLL 21 at GT and RBLL 20 at 38th Ave. and Vernon Blvd.) – both are operating properly.

10/10/97: TRANSFERRED FROM KATZ TO O'CONNELL.

**Caller Remarks:**

sheen found on water

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"

2/20/96: Steve Romero, Con Ed – believe discharge might be coming from sewer – contained in boom. Saw slick coming from sewer outfall. Will have Ensign White (USCG) call me (718) 706-2781.

2/20/96, 1420 hrs: Dom DiGiorgio, Con Ed – manhole covers on Ravenswood property are covered with bluestone. Sheen stopped. Checked tunnel head house, steam plant oil/water separators – no problems observed. Thinks that with melting snow regulators opened, allowing illegally dumped oil to be discharged. Shut off station separator as soon as saw sheen and it kept coming out of the sewer.

**Caller Remarks:**

oil was discovered in a concrete tunnel

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"  
 Oil seepage into Tunnel "A" through weep holes. Aprox 3 gallons total.

1/4/96: Con Ed internal memo states that weep holes were sealed by contractor. (JHO)

1/18/96: Con Ed internal memo indicates that source of oil is "ground contamination". (JHO)

3/27/03: Location of seepage seems to be in vicinity of #6 oil plume found during installation and monitoring of MW-26 (see spill # 0006311). (JHO)

Caller Remarks:

sheen on water discharge/investigation underway

-----  
DEC Investigator Remarks:

4/26/12–Vought–Duty desk officer. RSE received call from USCG as well onsite. Called Ray Lopez (Ph:718–706–2753) and sheen has stopped and all circuit and lube oil coolers were stopped. Boom was deployed by Kens Marine by discharge tunnel and amount of spill less than one gallon. Not sure of specific source and are still investigating source. Another contact is Greg Pryor (Ph:917–670–7893). Spill closed due to nominal and unrecoverable sheen and shutting of source (circuit and lube oil coolers). Lopez and Pryor may also return call with source once or if discovered. Vought received call later during day from Pryor and location of leak was determined to be "20 East Circuit Oil Cooler" and cooler was removed from service and leak will be sealed. USCG was also onsite earlier as well. Spill remains closed.

#### Caller Remarks:

Caller advised received a call advising an unknown amount of unknown oil was spilled into the east river. Caller advised that the facility is shared by Conn Ed and Trans Canada and it is unknown who is responsible at this time.

#### DEC Investigator Remarks:

Sangesland spoke to ERT. They saw a sheen which they believe is due to heavy rain water run off. Reponse team has deployed booms and they are trying to trace the source.

8/19/11 – Austin – No source for oil found at either Con Ed or TransCanada, according to them – TransCanada contained and cleaned up the spill – See documents in eDocs files for more info – Case closed – end

#### Caller Remarks:

overflow pipe – fully contained in concrete of building – cleanup in progress –

#### DEC Investigator Remarks:

1/18/11–Vought–Primary off–hours responder. Called Trans Canada (Adam Sadowsky (718)706–2753) and spill was turbine oil and cause of spill was tank overflow due to "valve position on flush" and spill was contained to concrete and cleaned up via vacuum truck and speedi dry and no sewers or drains or soil was affected. Spill closed by Vought.

## Caller Remarks:

clean up underway

## DEC Investigator Remarks:

7/30/10 – Raphael Ketani. Today, about 0.01 gal. of dielecteic fluid spilled to the ground. The fluid is believed to have come from a breaker switch nearby. The spill took place at the Vernon Boulevard substation. The EMIS is #222738. I spoke to the ERT desk attendant and he said that the spill had been cleaned up.

10/18/10 – Austin – 1-pint spill from breaker – Con Ed cleaned up effected soil as part of excavation work being done for equipment replacement project (40 tons of soil removed) – Con Ed contained and cleaned up the release – see eDocs documents for more information – closed – end

Caller Remarks:CALLER STATES THAT THERE IS A SPILL UNDER 10 GALLONS TO THE EAST RIVER UNK SOURCE.  
-----

## DEC Investigator Remarks:

07/31/09--Vought--Duty desk officer. Called Larry Conway (718)706--2873 and spill was less then ten gallons and was near discharge tunnel for cooling water from plant. Spill is boomed and some pancakes that escaped boom and they were recovered. Discharge is diminishing and USCG is onsite and Station is performing trace back to drains. Vought left cell phone contact information and requested that Conway return callback to Vought when source is found.

08/03/09--Vought--Called for status update and Larry out till Thurs and Vought was transferred to Environmental Unit (Kevin Fennessey 718--706--2873x706) and Vought left message to return call with update as soon as possible. Received callback from and spoke to Fennessey and no more oil observed flowing out of discharge pipe during weekend and source suspected is lubricant oil cooler (one of two). Suspected leaking cooler was taken off line and spill (approximately 5--6 drips per minute) stopped soon after. USCG off site and boom still in place but will be removed today. Spill closed by Vought as no impact to surface water and shut off of suspected source.

**DEC Investigator Remarks:**

210123. see eDocs

3-4-08. Inspected site with Leon Paretsky, Pete Sudol and Xmission Ops people. Feeder trifucates in MH. Nine gallons was found there. ConEd excavated on both sides of the MH. Small quantities of what appeared to be aged oil were found. If the feeder is leaking, the point of release has not yet been found. There is nothing to clamp, nothing to repair. Trying to determine if the oil found is from a source other than this feeder. Samples sent to lab. Investigation and vacuuming continuing. (Breen)

3-5-08. Pete Sudol reports that investigation has found no evidence of a feeder leak. Seems to be entirely historic contamination. Tanker contained 1400 gallons of water with no measureable oil; just a sheen. Con Ed expanded the two trenches along the feeder working out from the MH in both directions and found the feeder to be intact. ConEd is terminating the excavation work now, and waiting for the results of the soil samples they took. Next step will be preparation of a plan for remediating the historic. (Breen)

3-6-08: e-mail from Con Ed (Pfeiffer):

"From: Pfeiffer, Chad

Sent: Thursday, March 06, 2008 3:10 PM

To: 'Jane O'Connell'; 'George Breen'

Cc: Sudol, Peter J.; Pfeiffer, Chad; Mahoney, Sean; Suarez, Joseph

Subject: Vernon SS

"The excavation around Fdr 38M06 was extended west and soils were visually clean in that direction. It looks like the historic contamination we may have encountered in the soil is concentrated around the west wall of the manhole vault. Yesterday, we collected samples along the north and south walls and the floor of the excavation to get an initial determination of TPH concentration in the soil. Attached is the sampling sketch and some photos of the excavation. I'll send the results when we get them from the lab." (Breen)

3/11/08: e-mail from Con Ed (Pfeiffer):

"Attached are the results and updated sampling map for the excavation at Vernon SS. As you can see, the results on the south walls are pretty high and we'll have to excavate down a little deeper as well. Moving south from this excavation, we do have some obstructions, a cable trough and equipment foundations, that may limit how far we can go, but we'll get as much out as we can. The results on the north wall look to be ok." See eDocs for results and sketch. (JHO)

3/20/08: On site with Con Ed (Joe Suarez) – AllState crew was on-site this morning to expand the excavation, however rain last night had partially filled the original excavation and AllState did not bring a liquids truck. Have re-scheduled for tomorrow for soil vactor and liquids tanker. (JHO)

3/21/08: On site with Con Ed (Suarez, Pfeiffer, Sudol) – original excavation has been pumped down – some small globs of oil visible on mud at bottom of hole. AllState crew is now digging down to the south of the original excavation to remove contaminated soil. They have already dug down on the west side to the same depth as the feeders, and will be collecting post-ex. samples.

Later that day, received e-mail from Con Ed (Pfeiffer): " At around 3' below grade, we encountered contaminated soils, consistent with what we saw in the original excavation. Unfortunately, the Allstate crew had to be pulled off this job to respond to Transmission Ops emergency call this afternoon so we didn't get down to 4' as we had intended. We'll pick

this job up again next week with Allstate and also bring in sheeting/shoring contractor to go deeper and wider to see how far the contamination spread. I'll let you know what our schedule looks like for this." (JHO)

See eDocs for 2008 Substation Inspection Findings and for response from Con Edison relative to this spill.

4/7/08: Received results of soil samples in e-mail from Pete Sudol, along with sampling map. All results OK. Requested clarification as follows: "when I was out there on the 21st I thought there was another, shallower excavation to the south-southwest of the manhole. Soil was visually clean but you indicated that it was to be sampled. Do you have those results?"

Received clarification from Con Ed (Pfeiffer): " The area that we expanded that was visually clean but we agreed to sample was around sample points 1 and 5 on this side. This is the part we looked at that day you were here. The area on the north/northeast side of the manhole was only excavated for construction purposes, to reseal the manhole wall. That side was all clean sand with no indications of contamination or staining. It was backfilled after construction was complete." (JHO)

4/14/08: E-mail from Con Ed (Pfeiffer): "Attached is the Vernon sampling map with some updates like you had requested. I added the extended excavation area and the sampling points from the original excavation area along with the adjacent manhole. Let me know if you have any questions or need any other information." See eDocs for revised sampling map. Close out. (JHO)

IN PROCESS OF CLEANING UP:

## DEC Investigator Remarks:

Ken Yager (718-706-2702) reports that a release was discovered on the ground at the 74 Street head house to ConEd after the storm. He has no idea how it occurred. No one, employee or otherwise, admits to it. Keyspan reported it, had it cleaned up. It was about five gallons of No. #6 FO. Ken will provide details in writing and then we can close this out.

August 13, 2007

Mr. George D. Breen  
New York State Department of Environmental Conservation  
Region 2  
Bureau of Spill Prevention and Response  
Spills Management Programs  
Hunters Point Plaza  
47-40 21st Street  
Long Island City, New York 11101

Re: Ravenswood Spill Reported 8/8/07: DEC #0705296

Dear Mr. Breen,

On August 8, 2007, while conducting a routine inspection tour, a Ravenswood employee noted several gallons of oil spilled on the gravel area next to the 74th Street Meter House. Once notified, the Shift Supervisor immediately reported the spill to the New York State DEC, and was assigned spill number 0705296.

A thorough inspection of the area was performed in an attempt to discover the source of the spill. All fuel oil equipment in the area was intact and no leaks were discovered. The source of the spill was indeterminate. Ravenswood contacted Waste Recycling Services to perform the cleanup. Waste Recycling reported on the afternoon of August 8th, and completed the cleanup the same day. Approximately five gallons of oil were spilled.

This is notification that the cleanup actions for spill number 0705296 are complete, and the case is ready to be closed out in your records. If you have any questions, or require any additional information, please call me at (718) 706-2773.

Sincerely,

Kevin M. Fennessey  
Ravenswood Regulatory Compliance

718-706-2773

Closed on the basis of the above report. GB

**Caller Remarks:**

SHEEN OF TURBINE OIL COMING FROM DISCHARGE CHANNEL. ENVIRONMENTAL COMPANY (KEN MARINE) HAS BEEN CONTACTED REGARDING CLEAN UP.

**DEC Investigator Remarks:**

12/13/04 10:15 AM

Sam Arakhan was informed by Mr. Patterson of KeySpan that leak/sheen is intermittent. Clean Harbors and Ken's Marine are on-site to respond to this incident.

12/14/04 0830 AM

Sam Arakhan was informed by Dom GiGiorgio that the sheen is dark/dirty, not indicative of a fresh spill. He suspects that the city sewers overflowed from the recent heavy rains ( this is the second occurrence).

Update 12/21 @ 10:13 AM

Dom DiGiorgio called to state that no leak/sheen observed since 12/16/

 Caller Remarks:
 

---

 caller suspects a hole in barge. spill not stopped yet
 

---

## DEC Investigator Remarks:

 12/16/2002: The Rhode Island barge was transferring #6 oil to the Rainey Tanks when the barge personnel noticed some pieces of
 

---

oil in the water. This happened as the station started to pump the oil in the morning to the Rainey tanks. The 1 hour contractor Oil Mop had a boat and placed boom around the barge. They removed the oil from the water using a fishing net. There was no evidence of oil at the time of inspection. The Coast Guard arrived at the station to study the situation. Moran (owner of barge) will take the barge to a ship yard in staten island for inspection. The oil did not come from the pipe connection. It might have come from the side of the barge, below the surface of the water. (ARS)

1 oz spill in the tunnel. oil/water separator and there was high levels of pcb. nrc # 631321. no con ed # as of yet. they are still investigating poss causes of spill.

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
 E2MIS NOTES 146319

10-DEC-2002 – At 10:25 Env Sec Manager A. Schmitz #84229 reports a SPDES permit exceedence at the Ravenswood Tunnel site on

12/9/02 of unknown oil & grease. Lab results report 34.7 PPM Oil & Grease. The allowable limit is 15 PPM. Cause is unknown. There was no fire or smoke. Tunnels and Gas EH&S are investigating. CIG T.Marcinek #87549 and ERT, D.Duke #88158 notified at 10:35. As a precaution ERT Duke reported SPDES exceedence to the National Response Centre

2/3/2003

Spill was referred to Water. No enforcement will be done due to the fact that this is a unusual violation of their SPDES permit limit. The facility has been in compliance for the past 3 years. No further action.

**Caller Remarks:**

caller states during excavation 2 steel drums that were buried ruptured causing content to spill – unknown liquid material spilled

some product has been vacuumed up

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

10/31/02, 1:30 PM: Spoke with Pat Van Rossem (KeySpan) – They found 2 x 550 gallon tanks encased in concrete. Tanks are likely associated with former MGP (identified on site plans as "oil tanks" or "oil drip tanks"). While contractor was breaking up the concrete, they accidentally punctured one of the tanks – some liquid leaked out into the excavation and was pumped into a frac tank. Took samples for PCBs, waste characterization. Tanks will be pumped out and then a decision will be made whether to remove or close in-place. P. Van Rossem will send lab results when received. (JHO)

11/4/02, 10:14 AM

E-mail from Pat Van Rossem:

"Jane,

On Friday, three (3) 550 gallon steel tanks were removed from the

Ravenswood Cogen. site gas compressor building area after receiving the laboratory results indicating that the water in the first two tanks was non-hazardous for PCB's (13.1 ug/l for the north tank, and 0.37 ug/l for the south tank). They were abandoned drip oil tanks remaining from the the MGP site. High PCB's are not typically associated with this type of tank but the PCB analysis was done anyway to be sure. The tanks were pumped out prior to removal.

The tanks were encased in very thick (about 18 inches thick) concrete (not in a vault), and they were in good shape upon removal. They were filled with water which is very good, and the soils around the concrete tank enclosure were not visibly affected. We did wait until later in the afternoon Friday to remove the tanks since you had indicated that you would try to visit the site Friday morning.

As we discussed on Thursday, some water was released from the tank on Thursday when the top of the tank was hit by the excavator upon discovery. This was reported as a spill (DEC Spill # 02-07948). The excavation around the tank was dewatered extensively Thursday and Friday and the pumping recovered the water that was released from the tank and transferred it to the frac. tank for proper disposal. I will also send you the PCB analytical results and some digital photos later. Please

give me a call if you have any questions. Thanks.

Pat"

Caller Remarks:

CALLER NOTICED SHEEN ON RIVER – STATES IT IS NOT COMING FROM HIS FACILITY – APPEARS TO BE COMING FROM THE NORTH

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
 See spill # 0204491. Spoke with Frank McIntosh (KeySpan) who reported a sheen in the East River near the Ravenswood plant during the period of the fire (spill # 0204499). This sheen was observed outside KeySpan's boom, and is probably related to the foam from the Reliant transformer fire. (JHO)

E2MIS NOTES 143359

Charles Davoren, Supervisor, reports during inspection, historic contamination was found at PH 2. The flooring consists of a removable metal plate over a sub floor. By visual inspection the surface layer underneath the sub floor appears to be stained. The quantity released is unknown, however the approximate size of contamination is 4 inches wide, for reporting purposes the volume has been entered as –1 gallon. This plant is known to have a concrete moat. The substance is unknown, however it is likely to be identified as dielectric fluid. The source of contamination is unknown. The cause of contamination is unknown. There is no active fire/smoke at this time. Release to sewer/waterway is not verified at this time. No private property has been affected. A station remediation plan will be prepared to determine the priority order for addressing this and other historic incidents as per SSO's letter to NYSDEC region II dated February 20, 2002. Housekeeping and maintenance activities, as required, will be documented.

e2mis no 157793

3/25/05 10:35 HRS A. ROTOLA #49961 SEN SUB–STA OPER REPORTS FINDING APPROX 10 OZ OF DIELECTRIC OIL LEAKED FROM VALVE#37 AT PUMPHOUSE #2 IN VERNON SUB–STA ONTO SOIL. THIS WAS FOUND WHILE DOING ROUTINE STATION INSPECTIONS. THERE WAS NO SEWERS, WATERWAYS, OR PRIVATE PROPERTY AFFECTED. THE SOURCE OF THE SPILL IS THE VALVE ITSELF, WHICH HAS BEEN TURNED IN FOR REPAIR. ABSORBENT PADS HAVE BEEN PLACED UNDER THE VALVE, AND THE OIL IS A KNOWN NON PCB OIL. ENV STOP TAG# 1420101 HAS BEEN PLACED BY THIS VALVE.

See eDocs for 2008 Substation Inspection Findings and for response from Con Edison relative to this spill.

**Caller Remarks:**

while doing an excavation for a power generator at location a slug

of #6 fuel was found – approx 5 gal – all material cleaned up

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

1/24/02: On site with Steve Sellinger (DER on-site inspector for MGP cleanup) – he showed me excavation north of fresh water reservoir where 2" and 6" fuel oil lines had been removed over the weekend (1/19 to 1/21). Small amount of oil visible in pockets along the length of the excavation floating on groundwater. The excavation is approximately 25' long x 2' wide. I told Jack Rodak (KeySpan construction manager) to call this in as a new spill since we did not have any historical findings in this area. Also instructed him to place pads in excavation to absorb the oil. (JHO)

1/25/02 – spoke with Bob Cantagallo (Foster Wheeler) and told him spill had still not been reported to the Hotline. Also asked him to coordinate with Jack Rodak to collect soil samples. (JHO)

See eDocs for site photos. (JHO)

see eDocs for closure request. Breen

 CON ED E2MIS REPORT

While doing an inspection at the Ravenswood Tunnel a spill of 0.5 pt of lubricating oil from a gas main ROV vavle was discovered outside the tunnell. The spill was contained to an area of bluestone and did not enter any sewers/wayerways or subsurface structures. The spill was cleaned up with spill kit and the area of bluestone was removed from the area in plastic bags. The fiting on the valve was tightened and this stopped the spill.

2 oz oil found in soil and approx 2ft by 3 ft area with and oil smell to it. clean up pending test results – con ed 136-014

**DEC Investigator Remarks:**

08/27/08 – See eDocs for Con Ed report detailing cleanup and closure.

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"

Con Ed e2mis #136014:

3/20/01 1312hrs – Anthony Rotola # 49961 Sr. S/O S/S Operations reports he found 2 oz unknown oil in excavation on w/s Pump House # 6 and on e/s Pump House # 6 excavation he found 2' x 3' area of dark soil with petroleum odor at Vernon Station. He advised me foreman will have chemlab come to location to take sample and flashpoint. Env tag # 142-0150. Clean up pending test results. Will advise of chain of custody # when chemlab/foreman arrives.

3/30/01 13:20

As per hard copy documentation, cleanup completed by McEnerney #27908 on 3/20/01 at 13:35hrs. Liquid/solids were

removed/recovered, absorbents were used to remove residual fluids, and visible traces of oil were removed. An absorbent sock was placed at the west end of PH #6 foundation. There was no visible oil after cleanup was completed.

4/4/01 17:05

LSN# 01-02935 indicates < 1.00 ppm PCB. No repairs necessary.

~~~~~

6/24/03: Verify no contamination under pumphouse – SSO survey indicates "not verified". (KMF)

See eDocs for 2008 Substation Inspection Findings and for response from Con Edison relative to this spill.

#### Caller Remarks:

overflow due to rain classified as 3

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"  
3/14/01

Met with Dom DiGiorgio. S&D Environmental was on-site yesterday sweeping up the muck and sheen from East River. Overflow during heavy rainfall occurred from city storm sewer. DiGiorgio stated this has happened before. DEP and Coast Guard were both on-site yesterday. Storm sewer outfall is located approx 200' south of intake tunnel of #1. DiGiorgio also mentioned that an employee reports having seen an oil truck spill about 50gal into street last week along Vernon Boulevard. (KMF)

11/12/02 Received letter from B.J. Polizzotti (forwarded from Region 1) dated 10/29/02. Requests closure for spill. Included spill incident report, spill incident form, and spill notification directory.

Incident report describes spill as approx 5gal that appears to be #6 oil within containment boom. Possibly sewage. Heavy rain is a possible cause. Sewage drain or barge is a possible source. S&D Environmental is the contractor.

Incident form indicates oil spill contingency implementing procedure (OSCIP) started. Made appropriate notifications.

#### Caller Remarks:

APPROXIMATELY 1 QT. – CONTAINED, IN PROCESS OF BEING CLEANED. TRANSFORMER LEAK.

#### DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"  
 6/23: Mr. Cribbin, CIG – above ground transformer, 0 ppm PCBc.

6/27: Gail O'Neil, Shift Supervisor – chem lab sampling @ 0800 hrs for PCB analysis. "Potential transformer" – used to be metering. In process of re-gasketing and making new gaskets – outage scheduled for October. Replacing pads on regular basis. Transformer holds only ~5 gallons.

6/30: Gail O'Neil – checked PCB at Section 1E – 4mg/100 cm2.

1/21/03 Inspected substation and found area cleaned and repaired. (KMF)

Con Ed e2mis #106562:

5/11/95 1230hrs

Transformer oil leak on bus section 1E of PT (C-phase). 1gal leaked to bluestone. Pads were placed and leak contained. LSN 95-06142-001, no PCB level given. Pending replacement.

10/3/99 1200hrs

During inspection with supervisor Mike Bonanno and Peter Sudol, it was decided that the status of the leak be changed to active. Chem Lab called to sample bluestone prior to contacting a contractor for the disposal of oily debris.

1/13/03 1815hrs

Area under 1E C-Phase PT was inspected and found to be free of any staining. It is evident that the PT was replaced since the last inspection. NYSDEC inspection of station scheduled for 1/21/03.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "RODRIGUEZ"  
 Con Ed e2mis #146010:

14-NOV-2002 0800HRS P SUDOL # 80493 EHS MANAGER REPORTS THAT E. MCINERNEY # 27908 CONST MANAGEMENT REPORTED TO HIM THAT HE FOUND 1 GALLON UNKNOWN YELLOW SUBSTANCE ON A 4' X 16' AREA 1" DEEP ON BLUE STONE AND DIRT. FOUND WHILE INSPECTING. NO ELECTRIC EQUIPMENT IN AREA. NO FIRE OR SMOKE. NO PRIVATE PROPERTY AFFECTED. NO INJURIES. NO SEWERS OR WATERWAYS AFFECTED. THIS JOB WAS CALLED INTO CIG BY P. SUDOL BEFORE THE 2 HOUR TIME LIMIT AND REPORTED TO THE DEC. CONFIRMED THIS WITH CIG MCKEEVER @ 1012HRS. WILL SAMPLE THIS WHEN CHEM LAB COMES TO JOB SITE.

## DEC Notes:

11/14/02 Foley inspected area of contaminated soil with Pete Sudol. During construction to install a feeder across the property, a patch of discolored soil was found (4'X14'X1"). Appears to be "spray-on" black asphalt material (not yellow as stated above) which we saw at Jamaica Substation. It was explained then (by Al Butler) that it was commonly used to provide a working surface. Samples were taken to characterize the soil. It will be treated as hazardous until sample results return. There is no oil filled equipment in this area.

1/24/03 Received analytical results from Pete Sudol. Inspected excavation on 1/21/03. No contamination evident. Con Ed in the process of installing feeders to Keyspan property.

Caller Remarks:

IN BASEMENT AND UNKNOWN CAUSE: FIRE DEPT ON SCENE

DEC Investigator Remarks:

02/08/08–Vought–Site visit by Vought and NYCFD and OEM Richard Wilde (ph: 718–422–8468 fax:718–422–8939) onsite with building management company Laurnece Jaret (ph:212–407–2537 fax:212–407–2677). Approximately 350 gallons of #6 fuel oil spilled into boiler room. Cause of spill as per Jaret was oil filter was being repaired yesterday and spill was caused this morning with no recent deliveries indicating poor maintenance of system and hence sole responsibility of building owners. No vapor complaints from resident to date and basement being ventilated via leaving doors open during cleanup. Boiler room floor well sealed with epoxy over poured concrete floor (no pathways to subsurface) and sump filled with oil and disconnected. DEP enroute to scene. Unable to confirm cause of spill as three inches of oil on floor and unable to examine exact location of spill.

Vought sent CSL with above requirement and one month due date to:

Mr. Laurence Jaret  
Rudin Management Company, Inc.  
345 Park Avenue  
New York, NY 10154  
Fax: (212) 407-2677

Vought called NYCOEM Wilde and left message that he was sent fax of letter to Jaret.

01/29/09–Vought–Spill closed due to no impact of petroleum to soil or groundwater and cleanup of spill by AL Eastmond.

#### Caller Remarks:

LEAKING PISTON IN THE ELEVATOR SHAFT ABOUT 100 GALLONS SPILLED TO THE CONCRETE PIT. CLEAN UP PENDING.

#### DEC Investigator Remarks:

Sangesland spoke to Mr. Bolger of the Facilities/Engineering Dept at the University – His cell # 917-440-6700  
 The piston on the elevator shaft was leaking and approx 100gal of hydraulic oil spilled to the elevator pit floor. Area is totally contained.  
 He will hire someone to pump out the oil, clean the pit and then repair the system.

\*\*\*\*\*

8/20/2009 E-mail to DEC from Mr. Bolger at the University:

Hydraulic Oil Spill Completion Report.  
 Rockefeller University  
 1230 York Ave. NY 10021.

On August 13<sup>th</sup> at 1.30pm I received a report that there was an oil leak in the elevator pit at Abby Aldrich Hall. on the campus of Rockefeller University, at 1230 York Ave. NY 10021.  
 The elevator was taking out of service, which stopped the leak at 1.40pm.

The leak was coming from the piston rings in the elevator pit, all hydraulic oil was contained in the pit and there was no damage to the environment.

A.B.oil Service LTD.1599 Ocean Avenue, Bohemia NY.11716. Telephone # 631-567-6545.

State ID #NYD987023371. was called to vacuum out the pit and they placed absorbent pads on the floor\*.\*

Type of waste generated, liquid and solid, Manifest Document No 61470.

The elevator piston will be repaired or replaced before the elevator is placed back in service.

Sincerely Yours  
Brendan F Bolger  
Chief Engineer and Manager  
Office. 212-327-8425.  
Cell. 917-440-6700.

\*\*\*\*\*

08/19/09-HRAHMED-Spoke to Mr Bolger. As per him spill was contained in elevator pit and their contractor vacuumed all the oil from there. They will keep the elevator out of service until they fixed the piston which spilled the oil.

This case is closed.

**Caller Remarks:**

oil was spilled during a transfer operatiopn-contained within brick wall 2nd containment-being picked up with absorbent pads-cleanup underway-

---

**DEC Investigator Remarks:**

05/29/2007-Vought-Off hours responder. Vought called and spoke to Bolger and spill caused by opening wrong valve during oil transformer. Oil was removed from containment by speedy dry which was drummed and drums will be removed. Secondary containment has no cracks or crevices. No sewers or drains were affected. Some odors in building and basement was ventilated with exhaust fans and no further complaints have been received. Tanks were 18,500-gallons. Tank is registred and registration was renewed last year. Spill closed due to no release to subsurface. Tank location in basement of ten stories with poured concrete basement.

#### DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "KRIMGOLD"  
01/26/04

Transferred from Rommel to Austin

02/17/04: Reassigned from AUSTIN to KRIMGOLD.

09/09/2005 – Changed DEC lead from Krimgold to Zalewski. (Zalewski)

03/9/2006 – Placed a phone call to Brendan Bolger (Rockefeller University). He checked his records and stated that this spill was the result of a leaking fuel oil line at their power plant. He said that the oil line runs in a three foot deep concrete "trench" that is sloped back towards a sump that has manually operated valves for the ejectors. The line was isolated and the leaking section was cut and replaced. The trench was cleaned by in-house staff and the oily debris was collected in a drum and disposed under the facility's solid waste permit. (Zalewski)

e2mis no. 155820:

10-14-04 11:15

@ 10:40 UG Mech. T. Lopez #85886. Discovered a spill, of 1 pint of insulatum in manhole 57127, located 22' S/E/C E 69 ST YORK AVE in the ctr lane. This is a leaking feeder. (de-fault hole). Drip rate can't be determined by reporter. De-fault tag # 00756. Source of spill; joint. Two samples taken 1 oil id and 1 pcb. No sewer connection.

10/15 @ 00:15

Lab Sequence Number: 04-08374-001 Analysis indicates the presence of a cable oil.

10/15 @ 02:55

Lab Sequence Number: 04-08373-001 TOTAL PCB 818 ppm

Update 12-2-04 @ 11:50

As per mcc shift manager J Mejias, this incident is still pending positive identification of feeder and d-fault repair.....J Moran #01182

Cleanup setup for 23:00 HRS on 12/4

Transportation notified and faxed documentation for an OVER 50 tanker UG notified through Feeder control Vactor services notified and faxed documentation

12/4 @ 21:45

Cleanup made to be re-scheduled due to lack of crews needed for a Feeder outage cleanup # 156462

D.Brunner#90216, of the underground, notified the control center on 12/10/04 at 05:45hrs. to report the partial cleanup in M57127 was completed. There was one barrel of debris removed and approx. 100 gallons of oil and water mixed removed from M57127. The liquids were removed via tanker. The method used to clean was, triple washed with slix. The yellow environmental tag #41964, was left in place pending the results of the wipe samples test. The cleanup crew were;

D.Brunner#90216, J.Miller#87417 and L.Morales#74700. The source of the spill was a leaking joint, that has since been removed and replaced. The partial cleanup was completed on 12/10/04 at 05:00hrs.

12-17-04

Lab Sequence Number: 04-10449-001

---

## DEC Investigator Remarks:

09/13/06--Hiralkumar Patel. received during off hours on 09/12/06. visited site. met Bruce Farco at site. as per Mr. Farco, cleaning crew was trying to remove one unused transformer from sub-basement. during this, transformer dropped down and oil spilled on concrete floor. floor had hair-like cracks to upper part of concrete. found oil on top of water. as per Mr. Farco water was leaked from one of overhead pipe. Trade Winds was hired for cleanup and they were working to remove all contaminated material. asked Mr. Farco to submit color photographs after cleanup and disposal manifests to the Department.

Bruce Farco  
Evening Supervisor  
525 East 68th Street  
New York, NY 10021  
PH. (212) 746-6430  
FAX (212) 746-8930  
Email: brf9005@nyp.org

09/15/06--Hiralkumar Patel. received photographs of site after cleanup from Doug (dschrimpf@tradewindsenvironmental.com) through email.

---

Hi Kumar-- As our discussion please find enclosed pictures of cracks and small holes size of a quarter in basement floor were transformer oil

Spilled. PCB field test confirmed oil tested positive for PCB's ,I should have lab results by Tuesday to confirm. Any questions please call.  
Doug

---

photo shows little cracks on floor. discuss with DEC Austin as spilled oil might contain PCBs. as per Austin, cracks in floor doesn't look too bad but further investigation is depends on soil analyticals. and disposal of contaminated material is also based on these analyticals. spoke with Doug at Teadewinds. contaminated material is still on site and will disposed off after they get lab analyticals.

09/22/06--Hiralkumar Patel. received lab analytical for oil sample from Doug. discuss this results with DEC Jene. as per Jene, transformer oil would be considered as hazardous if PCB level is more than 50 ppm. as this sample shows less than 2 ppm, no soil samples required.  
left message for Doug to remove drums from site and to submit disposal manifests.

11/14/06--Hiralkumar Patel. left message for Doug at Treadwinds.

11/20/06–Hiralkumar Patel. received disposal manifest from Doug.

#### Caller Remarks:

A FEW DROPS SPILLED FROM A DROPPED THERMOMETER; APT IS 24 O(AS IN ORANGE); ATTEMPTED TO CLEAN BY SWEEPING THE AREA AND USING A HANDLE HELD VACUME;

#### DEC Investigator Remarks:

1/22/08 – Raphael Ketani. I spoke to Parun Kewalramani (646) 489–0732. He said that he had tried to vacuum up the mercury. However, he called the NYFD. They cleaned up the home. The vacuum, broom and other materials were bagged. The NYFD cleaned the floor. I told him to ventilate the apartment well. He said he will.

Based upon the NYFD cleaning up the spill, I am closing the spill case.

## DEC Investigator Remarks:

e2mis no 158531

Biliski discovered approx 5 gal dielectric and 5 gal water. No sewer/waterway affected. The source is the Transformer and the cause is a Bottom leak. The spill is in the concrete strucutre. No substantial cracks were observed. Environmental tag # 42046 was hung. Two samploes were taken for PCB and ID. The sump piping will be taken apart to see if there was any relaese situation. Absorbent pads were laid down. The cleanup will be pending Feeder out of service.

Biliski took apart the sump piping and it returned clean and no release to the environment.

5/11/05 20:07 Received lab results, Lab Sequence Number: 05-04387-001. TOTAL PCB 26 ppm

5/11/05 20:29. Lab Sequence Number: 05-04388-001. Analysis indicates the presence of a transformer oil.

5/11/05 20:43 S. Asfour # 49908 Reports that tanker removed 50 gallons of water/oil from the pit.

The unit will be drained 5/12/05.

Update 6-11-05 @ 12:34. J Bencivnga # 39929 reports that the cleanup is complete as of 11:30. 10 gallons of oil and water mixed removed by vactor truck. Double washed with bio-gen degreaser and flushed. Cleanup supervisor and crew are listed in the event involved person screen. Tag # 42046 removed. Transformer was removed and a new one installed. Transformer was the cause of the spill. J Moran # 01182.

Closed. 8-12-05. George Breen

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"

## e2mis Notes:

Approximately 1 gal fuel oil leaked from vehicle and travelled along curb and approximately 2 oz. entered a catch basin at the northwest corner of 63rd St and York Ave. The spill did not enter any waterways or underground structures. EH&S Gary Windham reports spill has been cleaned up as of 11:30 4/6/01. Absorbant pads and speedy-dry were used to clean street. The catch basin cover was removed and basin was cleaned using absorbant pads to remove fuel oil on surface of water and simple green was used to clean walls of catch basin. All clean up materials will be disposed of properly in the E 16th St Yard. Windham reports the oil did not appear to have escaped the catch basin. It appeared that the oil never reached the water in the catch basin. The dirt that the oil dripped on was removed and the walls were washed with Simple Green. M. Walsh reports that Felix Industries has sent a mechanic to the field and is in the process of repairing the truck. KMF 4/9/01.

## Caller Remarks:

CONTRACTOR WORKING FOR WATER DEPT. WAS DIGGING – PIERCED CABLE. CONTAINED TRIPLE H2 THEY WILL CLEAN UP. CONTAINED IN EXCAVATION – WILL REMOVE SOIL DIRT – CON-ED IS VACUMMING OUT NOW.

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

11/8/93, 3:00 PM: Tim Fitzgerald and Tom Coffin of Con Ed on scene. Contractors working for City water dept (DEP) struck dielectric cable with backhoe at about 10:00 AM. 3000 gallons of cable oil was removed by AAA along with 17 yards of contaminated soil. There did not appear to be any more oil in the soil that was still in trench. DEP was on scene earlier. Tim Fitzgerald claims there was no oil in sewer. This makes sense, as there was not time for it to migrate from the point of release. Leak was clamped and crew was preparing to put freezes on line. (CAE)

11/9/93, 9:30 AM. Called Pete Fehn of AAA. He does not have all paperwork yet but that 4000 to 5000 gallons of oil were taken to Astoria along with 17 yards of contaminated soil. (CAE)

10/10/95: This is additional information about material spilled from the translation of the old spill file: DIELECTRIC FLUID.

3/13/03: transferred from Engelhardt to O'Connell. Appendix B site no. 7.

Update 12/8/05

This spill is being closed based on Site 7b investigation report in eDocs link for spill # 0111140. (SKA)

---

Caller Remarks:

DURING REMOVAL OF COAL TAR WRAP A FEEDER LEAK WAS DISCOVERED. FEEDER HAS BEEN SHUT DONE. SAMPLE TO BE TAKEN. CON ED NOT AVAILABLE

---

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"

## Con Ed e2mis Notes:

Maintenance Services was doing an abatement of coal tar wrap when dielectric fluid began to leak from the bottom of the feeder pipe. The oil is filling the manhole at a fast rate. Approximately 650 gallons was initially reported. The 138kV feeder is 38M35 in manhole #M61861. The leak is probably due to corrosion. Maintenance Services tried to put a clamp on the pipe to stop the leak but the pressure was too high. The feeder was removed from service at 13:56. At 14:25 the feeder was put on reduced pressure of 70psi. Con Ed tankers were requested to location. Clean Harbors was called to respond to pressure wash the manhole. A temporary cleamp was installed and holding at 15:40. Transmission Operations mechanic was sent to take measurements for a custom barrel.

Feeder removed from service since pressure was not holding. Clean Harbors asked to respond to power wash manhole. Temporary clamp installed and holding. Coating removal continues to find good pipe to install barrel repair. Took measurements for barrel.

PCB count is 184ppm.

Because coal tar wrap was being removed from the feeder pipe when the leak occurred, there was concern that some coal tar became entrained in dielectric fluid that was removed from manhole and contaminated tanker. Coal tar wrap is assumed to contain PCBs and asbestos, and when removed from pipes with painted surfaces, lead, cadmium, chromium. Chemist took samples. Tanker held at Astoria pending analysis.

Clean Harbors triple washed manhole and treated debris as lead, PCB. Removed 210kg from manhole in two drums. Cleanup completed on 7/31/01. Custom 22" long 20" diameter barrel fabricated to go over 2nd joint sleeve to cover clamp. Samples taken from Con Ed tanker on 7/31/01. Barrel installed 8/1/01. Normal pressure returned and feeder returned to service.

Dielectric fluid from feeder 38M35: PCBs <1ppm

Coal tar wrap off manhole floor: PCBs 184ppm, Asbestos 7.3%, TCLP Lead 0.084ppm, TCLP Cadmium <0.010ppm, TCLP Chromium <0.001ppm.

Tanker 60536: PCBs <1ppm, TCLP Lead 0.43ppm, TCLP Cadmium <0.010ppm, TCLP Chromium <0.015ppm, Benzene (top) 0.30ppm, (middle) 0.17ppm, (bottom) 0.19ppm.

Tanker 60538:

DEC Inspector Notes:

7/30/01 Con Ed tankers were pumping oil from manhole while installing temporary clamp. Clamp was installed and feeder continued to leak at a rate of 2gal/hr. Barrel was to be welded on while on suction. Waste disposal became an issue when it was discovered that the oil was not tankered from the surface. There was a possibility that the coal tar wrap and paint debris, assumed to contain PCBs and metals, had entered the tankers. Sam Arakhan allowed Con Ed to temporarily store the tankers at the Astoria Transportation Yard. Sample results are expected to return on Wednesday, August 1. (KMF 7/31/01)

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

10/25/93, 10:05 AM: Spoke with John Hegerty (Con Ed). Leak is 50 to 100 gph, 2000 gallons so far. Did visual over weekend, did not find leak. No leak on bridge. Checked main manholes, now shecking side manholes. First freeze will be 1st Ave & 59th St Bridge.

10/25/93, 12:30 PM: Met with Petty Officers Dooley and Spendsen (USCG) – they said Con Ed examined the cable along the bridge and found no leaks. Con Ed crew was on site at 1st Ave & 59th St excavating to perform freeze on line to find leak. Left scene at 1:30 PM. (CAE)

10/25/93, 8:00 PM: Oil started coming up in road on 1st Ave between 70th and 71st St. When I arrived, Con Ed crew already excavating for freeze test. Con Ed had thrown sand on road to absorb oil. By 8:30 found leak, wedged wooden spike in it. By 9:15 had clamp on hole. Oil started seeping back into trench from surrounding soil.

While spill was still ongoing, checked manholes – found oil/water flowing in manhole at intersection of 71st St/1st Ave – sewer, high flow, 15 – 20 feet deep. Original excavation trench was about 4' x 8'. Con Ed planned to excavate another 2' on the south side of the trench and 18" on the east side. Left scene at 9:40 PM. (CAE)

10/26/93, 11:00 AM: Con Ed crew is welding barrel onto pipe. Bob DePass (Con Ed) showed me copies of the incident report for spill. The reason there was a delay in reporting was because the substation waited 19 hrs to report the loss of fluid to CIG.

There is still free product leaching into the excavation. DePass is taking samples but they are saturated with oil. Mr. Silva is supervising the repair – they are going to put steel sheeting over pit and not backfill right away. Says they are going to excavate soils and allow seepage to continue and pump out. Told DePass we may ask them to do borings in the area to determine extent of contamination.

10/28/93: spoke with John Hegerty and Bob DePass – total leak amount 8375 gallons.

11/9/93: spoke with Pete Fehn of AAA – he said only 200 gallons of liquid oil was removed from scene, along with 20 yards of contaminated soil. The majority of the 8375 – 200 = 8175 gallons still in the ground. Using porosity data for contaminated soils (assuming 50% saturation), calculated that approx. 6200 gallons still in ground. (CAE)

3/13/03: TRANSFERRED FROM ENGELHARDT TO O'CONNELL. APPENDIX B SITE NO. 7.

Update 12/8/05

This spill is being closed based on site 7b investigation report in eDocs link for Spill # 0111140.

Material Spilled		Material Class	Quantity Spilled	Units	Quantity Recovered	Units	Resource(s) Affected
DIESEL		PETROLEUM	100.00	GALLONS	0.00	GALLONS	SOIL, SEWER

Caller Remarks:

A generator failure caused above fuel to spill and run down the block into the storm sewer.

DEC Investigator Remarks:

9/9/08 – Sangesland spoke to NYFD & Clean Ventures. Patel responding to the site.

Apartment building has a back up generator which had a problem with it's tank. 100 gal of diesel spilled to the street and down the storm sewer. Heavy rains are expected within the next 1–2 hours. Clean Ventures (908–354–0210) was called for the cleanup – they should be there by 10:45AM.

09/09/08–Hiralkumar Patel. visited site. subject site is located at the corner of East 71st Street and 1st Avenue and garage entrance is located along E 71st street. site has one 300 gal diesel tank in the basement, and one 250 gal diesel tank paired up with a generator on the roof. building contractor recently installed the tanks and the generator system, and they were testing the system today. during testing, they started pumping diesel from the basement tank to the tank on the roof. pump stopped successfully after completing the tank fill cycle, but due to some mechanical problem, fuel from the tank on the roof dropped back to the tank in basement via a suction line. as the basement tank was full, oil was pushed out through a vent pipe. oil spilled onto the concrete sidewalk, and ran on the asphalt paved street to a storm drain located at the intersection of York Ave and 71st street. FDNY responded and spread out sand on the oil slick on street along the curb. as per FDNY, about 3 inches of oil was also found inside the storm drain. there is ConEd vault next to this storm drain area that mayt have been impacted. DEC Steve notified ConEd regarding possible oil seeping into their vault. inspected the basement tank room and found a very minor (about 1 gal) spill on a new concrete floor. as per building super, there was no spill from the tank on the roof. there was no subsurface impact. FDNY and OEM were on scene.

CABLE OIL	PETROLEUM	100.00	GALLONS	0.00	GALLONS	SOIL

#### Caller Remarks:

cable oil spilled into a manhole

tests reveal it may be dielectric fluid

#### DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

Engelhardt notes: John Hegerty – no cable in steam manhole. Oil actively leaking into manhole. Feeder 38M35 suspect by inventory (<1 gal/hr). Flow meters being installed into substation pumphouses for confirmation. Will know tomorrow. If they confirm

feeder, will have contractor dig from steam pit to pipe to find leak.

5/24/96, 1340 hrs: Update from Con Edison – analysis results indicate cable oil. Loss of 400 gallons detected on feeder 38M35 running along 1st Avenue over an 18 day period.

5/26/96: leak located outside of steam manhole, clamp installed. Total amount lost = 500 gallons

4/18/05: Spill submitted for closure by Con Ed, with following comment: "The spill reported in MH-7293 (located on 72nd St. E/O 1st Ave.) in 1996 has been reviewed by Steam EH&S and determined that the condition has been corrected. Upon inspection of MH-7293, there is no presence of oil. The manhole was rebuilt during the Steam Enhancement Program during September 1998." Close out. (JHO)

James,  
Here are the results you requested. A leak on a 2" nipple coming off our feeder pipe was located and clamped by 16:10 hours. There is evidence of dielectric fluid coming into the manhole at the north wall penetration. We will be obtaining an emergency DOT permit to excavate north of the MH wall, make the necessary repairs and remove any contaminated soil. Post excavation soil samples will be taken to verify effectiveness of the cleanup and will work with the NYSDEC for final closure of the spill. Please feel free to contact me with any questions you may have.  
Mike Pillig

-----  
Sent from my BlackBerry Wireless Device

5-14-07. Conferred with Mike Pillig at site. ConEd has excavated on the north side of the vault down to 12 feet. The excavation is 8 by 8 feet across. They stopped at 12 feet because of a sewer pipe that runs east – west. They have removed impacted soil from the four foot level down to the bottom. There is water and floating product over the half of the bottom closest to the vault. Mike intends to try using pads to remove the oil. If that is not successful, he will bring in a tanker. Mike will sample the periphery of the excavation. Some of the remaining soil looks to be impacted. It seems likely that a well will have to be installed. It would be monitored as a long-term project by Barry Cohen and Matt Madsen. A reference tank was located outside the north wall of the vault with a penetration at the four foot level to connect the tank to the feeder. The vault wall is stained from this penetration on down. Breen

10/4/07: e-mail from Con ed (Pillig): "Here is the diagram and sample results for the spill on FDR 73 at York Ave. and 73rd St. To refresh, there was approx. 4000 gallons contained in the manhole. Some DF had escaped through the north end penetration. We excavated to the north, conducted a first round of sampling and found elevated levels to the west of the excavation. We then

backfilled the original excavation and opened a new one to the west. We dug down to bedrock and did not observe any oil. There is however a water main which runs parallel to the MH as illustrated in the diagram provided. While we were unable to excavate under the water main, we did excavate west of the water main down to bedrock. We then sampled the west wall of the new excavation and found that very little migration to the west occurred. To the extent we removed the contaminated soil, notwithstanding that which remains between the water main and the bedrock, we would like to request permission to close this spill." (JHO)

10/9/07: Spill submitted for closure by Con Ed (Pillig). Post-excavation sampling results indicate that a small amount of residual contamination remains in soil beneath a NYC water main. This soil is inaccessible for excavation, and is covered by pavement. All post-excavation sampling results to the north, south, east and west of the water main are clean. See eDocs for analytical results and site sketch. Close out. (JHO)

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "FOLEY"  
Con Ed e2mis #137921:

6/28/01 @ 04:55 hrs.:

27-JUNE-2001 04:55 hrs

@ 04:11 hrs Field Operator Mechanic R.Jack #17064 was dispatched to the following location to due emergency repair work when he discovered approximately (200) gallons of transformer fluid mixed with approximatley (75) gallons of water located in V5525 located in front of 356-54 E.72nd Street. Sewer connection could not be verified, Concrete sump could not be verified, There was no visual water movement, No sump pump running, And there were no substantial cracks. There was oil filled equipment in the structure & there is a dielectric filled feeder in the structure. this is on feeder run of 24M91. A yellow tag #20736 was issued. (2) samples were were taken (1) for ID & (1) for PCB. A chain of custody #BB05278 was issued & no pre-cleanup or action has been taken. ERT is on location @ this time & is reporting that @ this time from what he can see @ this time the oil in the structure is stagnant. when the I&A dept arrives on location they will further investigate & give updates during the cleanup process. Spoke with CIG @ 04:29 hrs. Spoke with M.Schlagel #18276. There is an historical record for PCB of (7) PPM last dated 16-July-1997

Bob Biliski, I&A Supervisor reported at 11:40 hrs. that oil and water was pumped from the floor of the vault. The transformer is presently being drained. He verified that there was no entry into the sewer or waterway due to the operation of the oil minder that was installed by the pump. Oil was sensed by the probe and the pump was shut down. Partial cleanup of the vault is presently in progress.

EPA # NYP 004 085 494 was issued by the ERT.

01/15/02 11:48 J. Bencivenga #39929 Cable (cleanup) forman Reports that at 11:45 this structure was cleaned 100%. There was 250 gallons of water /oil mixture that was removed by a tanker. The structure was double washed with slix & rinsed down with a flush truck. The spill tag # 20736 was removed.

## DEC INSPECTOR NOTES

5/6/2003 2:00 pm.

Sam Arakhan and I met with Con Edison representatives Steve Wong, Jimmy Fox, and ERT Bernard Pierre. The purpose of the visit was to inspect the fill box in which kerosene oil spilled. The fill box location is next to the station at 75th Street.

Con Edison was taking an oil delivery when the tanker truck driver noticed that oil was coming through the bottom of the fill box. He reported having delivered 114 gallons of oil until he stopped the transfer. At the time of the inspection, oil was visible, Con Edison was instructed to clean the excess oil with pads and secure the fill box.

Con Edison will test the two adjacent fill box connections to see if they could use them. These connections all connect to the same manifold which divides in 5 to feed 5–20000 gallon tanks. They also have the alternative to connect the tanker truck hose directly to the manifold.

Con Edison has started to obtain the necessary permits to open the sidewalk. The sidewalk appears to be recently repaired (less than two years). (ARS)

6/9/2003: FOR SIMPLICITY, I WILL CLOSE THIS SPILL AND FOLLOW IT ON SPILL 0301656. CON EDISON SUBMITTED A CLEANUP WORKPLAN ON 6/4/2003. (ARS)

~~~~~  
E2MIS 148245

11:10 hrs – Shift Supervisor notified EH&S Manager of a problem with a kerosene delivery that had just started and requested that he come to the kerosene fill connection on 75th Street.

11:15 hrs – EH&S Manager arrived at kerosene fill connection. The operators and tanker truck driver report that as they started pumping kerosene into the fill connection, some product started bubbling up around the outside of the fill pipe (but contained within the connection box in the sidewalk). They promptly stopped pumping, but 114 gallons had already registered on the tanker trucks meter as having been transferred. It appears that there is a break in the fill pipe as it runs underground into the Station.

#### Caller Remarks:

VALVE LEFT OPEN TOO LONG.

#### DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "ENGELHARDT"  
 07/30/97: Spill was inadvertently assigned to Region 7 by Dispatch Center. This is a region 2 spill (county = new york).  
 AMChieco.

e2mis 107844

04:20 hrs – OMA Flemming found the chemical mixing moat overflowing and the chemical mixing tank fill valve open. The emergency condensate pump was shutdown and chemical mixing tank fill valve was closed.

Approximately 25 gallons of caustic mixed with water and overflowed into the 6th floor moat. The area was secured and clean-up was begun.

Note: the chemical mixing tank fill valve had been replaced by maintenance and had inadvertently been left open. The emergency condensate pumps are used to fill the boiler when the boilers are off-line. Boiler 122 was being filled using the emergency condensate pump. The emergency condensate pumps are used as normal supply water to the chemical mixing tanks.

07:00 hrs – The chemist checked the ph of the flooded chemical moat on the 6th floor and found the pH to be 12.

07:05 hrs – The operators were dispatched to secure the area under and around the 6th floor chemical moat.

07:18 hrs – CIG Masseria was notified that there was a chemical spill of a dilute sodium hydroxide solution, ph of 12, and that several hundred gallons spilled into the moat and that the moat is overflowing.

07:50 hrs – As per the spill response plan, the chemical spill clean-up vendor, AETC, was notified that support is required. An answering service was contacted who stated that AETC will be notified.

08:15 hrs – A follow-up call was made to AETC. The answering service informed the station that Walt Bertell of AETCc has taken the call and will be contacting us shortly.

08:30 hrs – The area under the 6th floor moat was secured by operations personnel.

08:33 hrs – Mr. Eckhard Debbart of AETC called the station confirming with GWS Tweed that a 5000 gallon vac truck with enough hose to reach the 6th floor moat has been dispatched.

10:30 hrs – All sumps in the basement were tested for pH by the station's chem. techs. The pH in the sumps were normal with a pH of 7.1 and 8.6. As a precaution, the sumps were secured to prevent operation.

11:00 hrs – AETC vendor "bird dog" arrives at the station to determine the clean-up job scope.

11:30 hrs – Using the AETC vac truck, the moat is being vacuumed and all the captured liquid is being transferred to the waste neutralization system via the

AETC truck.

18:28 hrs – The clean-up of the moat and the surrounding areas was completed.

## Caller Remarks:

PH POF 7.8 AT THE DOCK SITE – SOLUTION IS 1% MIXTURE – SPILL WAS CAUSED BY TANK RUN OFF.

## DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

Zhitomirsky 9initial responder) notes: Leak in the boiler. Some oil from burner went on the floor (~100 gallons of #6 oil). All contained. Con Ed was doing an acid wash, they have to neutralize the water. Soda ash (~10 gallons) was leaking from the bottom of the boiler. In acid wash soda ash used to neutralize. Some HCl leaked in the containment, it was pumped out, then soda ash solution leaked into the containment (~50 gallons). It was pumped out. Then some of the #6 oil (~50 to 100 gallons) leaked into the containment. They are pumping this product out. No product, no soda ash in river (pH 7.6–7.7). USCG inspected and they were satisfied.

8/28/95 (Engelhardt's notes): Len Gelford – USCG gave approval to remove boom on Friday. Moat awaiting repair. Presently removing loose concrete from moat. Leak caused by valve being left open. Have been neutralizing everything with the waste neutralization system. Need to repair valve on waste neutralization line.

---

Caller Remarks:

CALLER REPORTING THAT OIL HAS LEAKED FROM PUMP HOUSE MOT AND IS CONFINED. SAMPLES TO BE TAKEN AND CLEAN UP PENDING RESULTS.

---

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"  
reference spill #0007132

DEC Notes:

3/1/00

ERT Masood Akbar reports that ERT Joe Arcoleo on-site. Leak from pumphouse into moat. Contained in concrete moat. Cleanup tonight on 3-11 shift. Sample taken for PCBs (unknown why--cable oil has no PCBs). Akbar did not know if leaking equipment was repaired.

Substation Operator, Brian Teehan (212) 861-2001.

3/2/00 Spoke with Brian Teehan--cleanup not done yet. Chem Lab on-site for samples. Revised estimate to 10-20gal based on visual examination.

3/2/00 O'Connell and Tipple on site and met with Stu Hanebuth (SSO Env Mgr.) and Brian Teehan (operator).

Oil is in 10ft deep pit beneath series of valves. One of the valves is dripping, but is being diverted to a drum--not source of oil in pit. O'Connell found source on far end of pit--valve is leaking. Station operator did not see it before. They did not know what the source was. Pit is concrete on 3 walls and floor, brick on 4th wall. The brick wall also has many conduits in it--pathways for oil. O'Connell told Hanebuth to get PCB results, vac out pit to complete cleanup and epoxy the brick wall and possibly seal conduits. In meantime, Teehan must get repairs done--also needs to see where conduits go.

3/25/00 Gave all above info to Christine Koehler. Sample results show no PCBs, <0.013ppm benzene and oil is similar to dielectric fluid.

Con Ed e2mis #130198:

03/01/2000 @13:06 Brian Teehan #03177 reports he found approximately 100 gallons of dielectric fluid contained within a concrete moat at the E.75 St. Substation pumphouse. The spill does not involve water, smoke or fire. Samples are pending Chemlab and sign S01594 has been placed. Cleanup is pending sample analysis.

All state Power Vac recleaned the moat again, Sr. Environmental Specialist S. Hanebuth 85259 inspected the moat on October 12, 2000 and found no oil/water or debris left in the moat.

**NO MATERIAL INFORMATION GIVEN FOR THIS SPILL****Caller Remarks:**

ONE OUNZE OF MATERIAL AND IT HAS BEEN CLEANED UP. THE C-PHASE POTHEAD ON FEEDER 31, SUPPLIES TRANSFORMER #4: CON ED#156314

**DEC Investigator Remarks:**

e2mis 156314

Stephen P Grell 83964, Senior Substation Operator Was in process of doing an inspection on TR# 4 on feeder 38M31 and found that C Phase pothead had leaked approx. 1 oz of dielectric fluid to the bluestone. He has done a clean up removing bluestone; But the C Phase Pothead will not be repaired until feeder 38M31 becomes dead. He also reports that oil pads have been placed under leaking pothead. There was no fire or smoke involved and no sewer or waterway was affected. There were no injuries related to the spill and no weather conditions contributed to the hazards of the spill. No private property was affected. Spill Tag 3000277 placed.

6/13/05

Trans Ops employee H. Watson re-inspected the equipment associated with this spill on 5/17/05. No evidence of spill observed. No further action or repairs required. We are submitting this spill for closure. M. Pillig, 86856

Caller Remarks:

FUEL OIL HEATER MALFUNCTION

DEC Investigator Remarks: DEC INVESTIGATOR REMARKS NOT AVAILABLE FOR THIS SPILL ACCORDING TO THE LAST UPDATE.

**The following DEC Investigator Remarks were available prior to 1/1/2002:**

DEC (Sigona) conducted MOSF inspection on 10/29/97. Inspection of the equipment confirmed that the oil leaked on the inside of pre-heater system and drained through blow-down piping to new oil water separator which feed to City Sewer. There was no evidence of oil on concrete or leaks to seals. According to Goldwater Reps Jim Stuart, the oil did not escape system, and contractor (MEG) pumped separator twice over 1,000 gallons and cleaned system. No impact to river.

Left 2 messages for FF Flynn

11:00

Spoke to John from S&J Supply Inc. He said the forklift was unloading the truck and pierced the saddle tank. The FD responded and pumped out the remaining diesel in tank and threw sand and foam on the spilled diesel. They are taking the virgin diesel, and hiring a contractor RA Enmtl from 134th Street in the Bronx to clean and dispose of the sand. John will call me when the work is complete.

**Caller Remarks:**

Reported by Con Ed as required under Consent Order.

---

**DEC Investigator Remarks:**

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

2/23/04: Letter from Con Edison states the following:

"The spill occurred... due to a failure in Feeder 38M04. Con Edison's internal spill reporting records indicate that the spill was cleaned up following the repair of the feeder, but specific documentation could not be located. However, spills occurring subsequent to Spill # 9113340 in the same area have been satisfactorily cleaned up and the spill cases closed by the DEC... Con Edison believes that, had any residual contamination associated with Spill 9113340 remained, it would have also been addressed in the cleanup and closure of the subsequent spills."

5/13/04: Response to Con Ed:

"The February 23 letter transmits information on NYSDEC spill no. 9113340 which had been requested by the Department in order to assess the adequacy of cleanup of the spill. The information is inadequate to determine if the spill was remediated. During a meeting this morning, Con Edison staff indicated that this spill may have occurred at or near the feeder risers on the east side of Vernon Boulevard. This is an area that had not been previously remediated, as was stated in the Feb. 23 letter. Please provide copies of documentation regarding the spill location and cleanup." (JHO)

5/27/04: Con Ed transmitted photos of the spill area. TBTA is using the area around the feeders for equipment storage related to work on the bridge. The area immediately surrounding the feeders (approx 10' x 10') is fenced in. Suggested Con Ed collect soil samples from area inside fence area – since that is the area that would have been most heavily impacted (oil would have leaked down the feeder pipe). (JHO)

6/14/04: on site with Matt Madsen, Kalyani Jasti (Con Ed Remediation) and Chem Lab. Collected 3 samples from depth of approx. 1 foot below grade around the feeders inside the fenced area. Will analyze for TPH modified 8100. (JHO)

6/22/04: Lab results received – TPH ranged from 177 ppm to 529 ppm. Close out. (JHO)

NO MATERIAL INFORMATION GIVEN FOR THIS SPILL

Caller Remarks:

THE ACTUAL LOCATION IS THE RAVENWOOD TURBINE LOCATION.DURING DEC MANDATED WORK THEY LOCATED A BURIED 55 GALLON DRUM.THE DRUM DID NOT LEAK.UNKNOWN WHAT IS IN THE DRUM.JANE OCONNEL FROM DEC REQUESTED THAT INCIDENT BE ISSUED A SPILL NUMBER FOR TRACKING PURPOSES.

DEC Investigator Remarks:

Prior to Sept, 2004 data translation this spill Lead\_DEC Field was "O'CONNELL"

11/3/99: call from Dom DiGiorgio – Drum has been uncovered – top is bent back and drum is filled with possibly contaminated soil. Samples taken for PCBs, oil ID. Duplicates taken by Clean Harbors to be sent to outside lab. (JHO)

11/10/99: on site with Dominick DiGiorgio (KeySpan Env. Manager). During pre-drilling clearance for GT site investigation, uncovered drums (1 each thus far at GT Unit #8, 9 and 10). Drum at each location is directly next to GT foundation. There is a metal beam laying across the top of each of the drums. One of the drums was opened and sampled (oil ID, PCBs plus hz. char. for disposal). I told DiGiorgio to have structural engineer examine excavation/beam before attempting to remove drums. (JHO)

12/16/99: Update from Patrick Van Rossem – while drilling boring GTSB-7 at GT Unit #10, found soil contamination. Samples collected. (JHO)

11/18/02: Based on the information presented in KeySpan's Site Investigation Report dated May 2002, prepared by Foster Wheeler Environmental, this spill has been closed. (JHO)
