

How many cars outside your
window do you think are stopping
in your neighborhood?

It's less than you think!

Neighborhood streets become highways

GRID LAYOUT

Due to the grid layout in most of the city, non-local commuters and trucks can use what would otherwise be quiet local neighborhood streets to avoid congestion.

APPS

Google Maps and Waze have exacerbated the problem.

THIS RESULTS IN CUT-THROUGH TRAFFIC!

What if **a single approach** can deliver all of these outcomes?

Exploring a Neighborhood Approach to Reduce Cut-Through Traffic

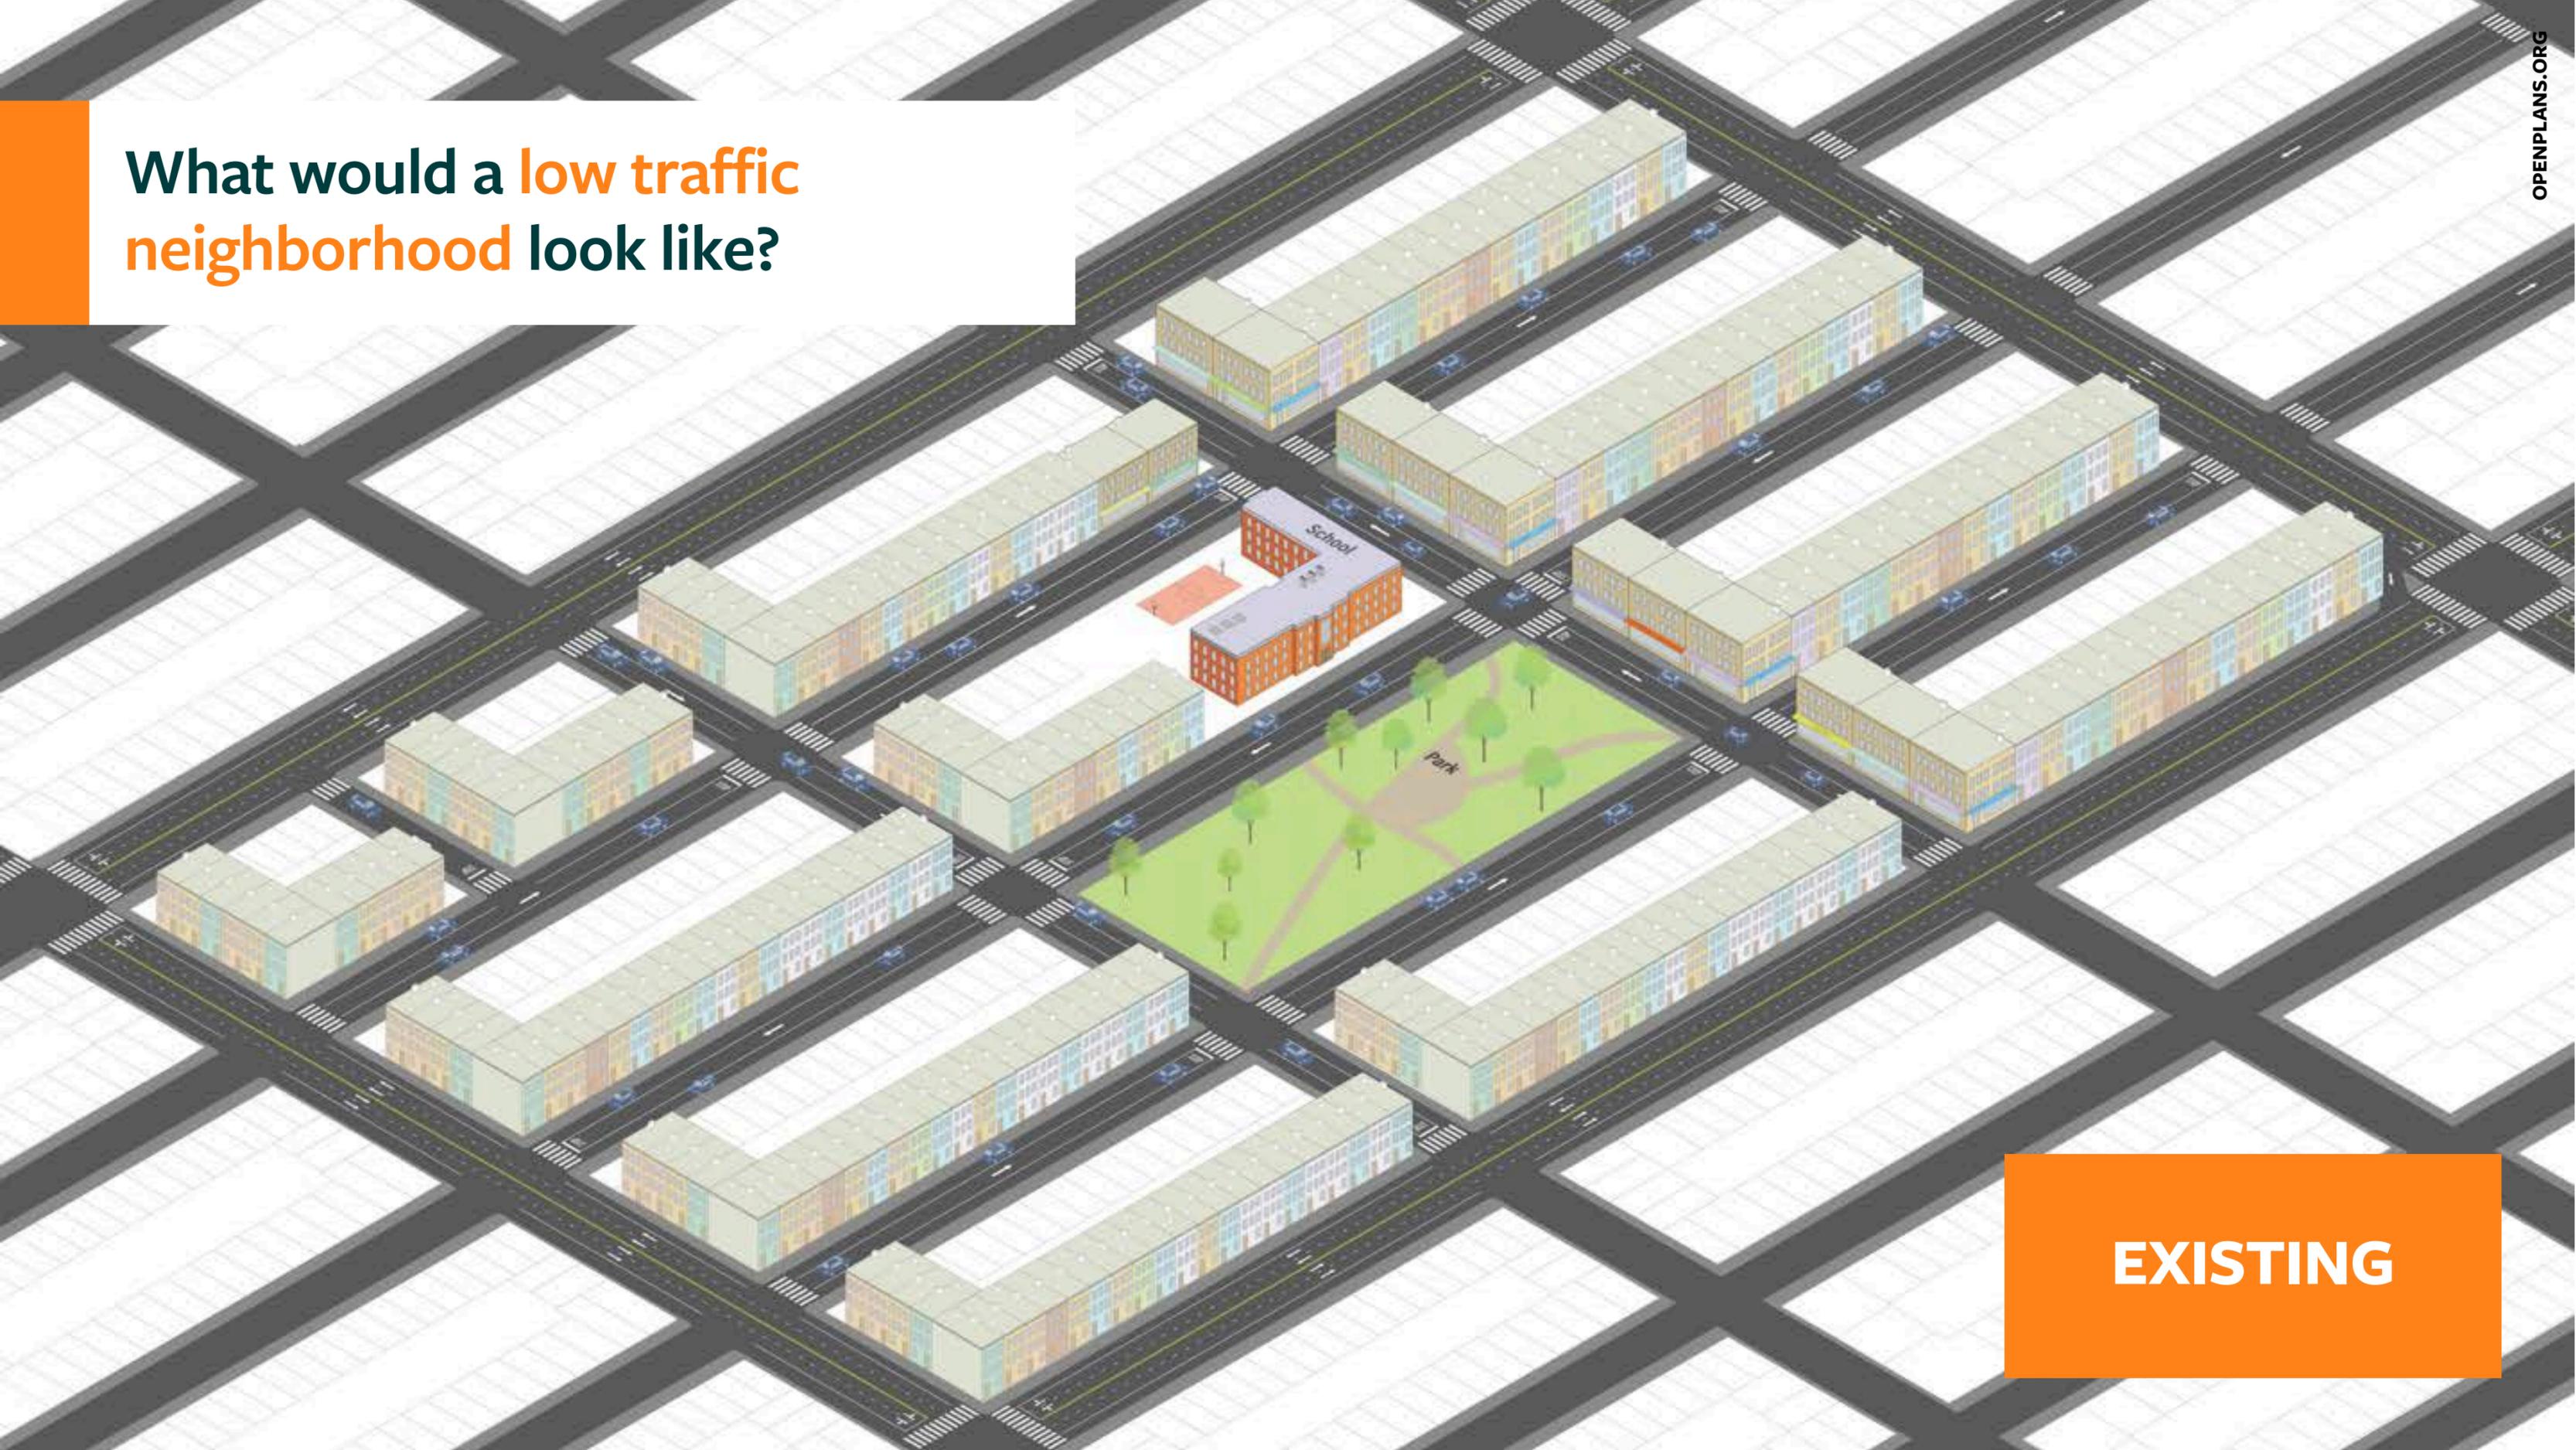

What is a **Low Traffic Neighborhood (LTN)**?

A neighborhood approach to managing traffic in a way that redirects through-traffic away from residential areas. The primary aim is to **enhance safety for everyone who uses the street.**

LTNs promote walking, cycling, and socializing, creating a healthier, more welcoming environment for all.

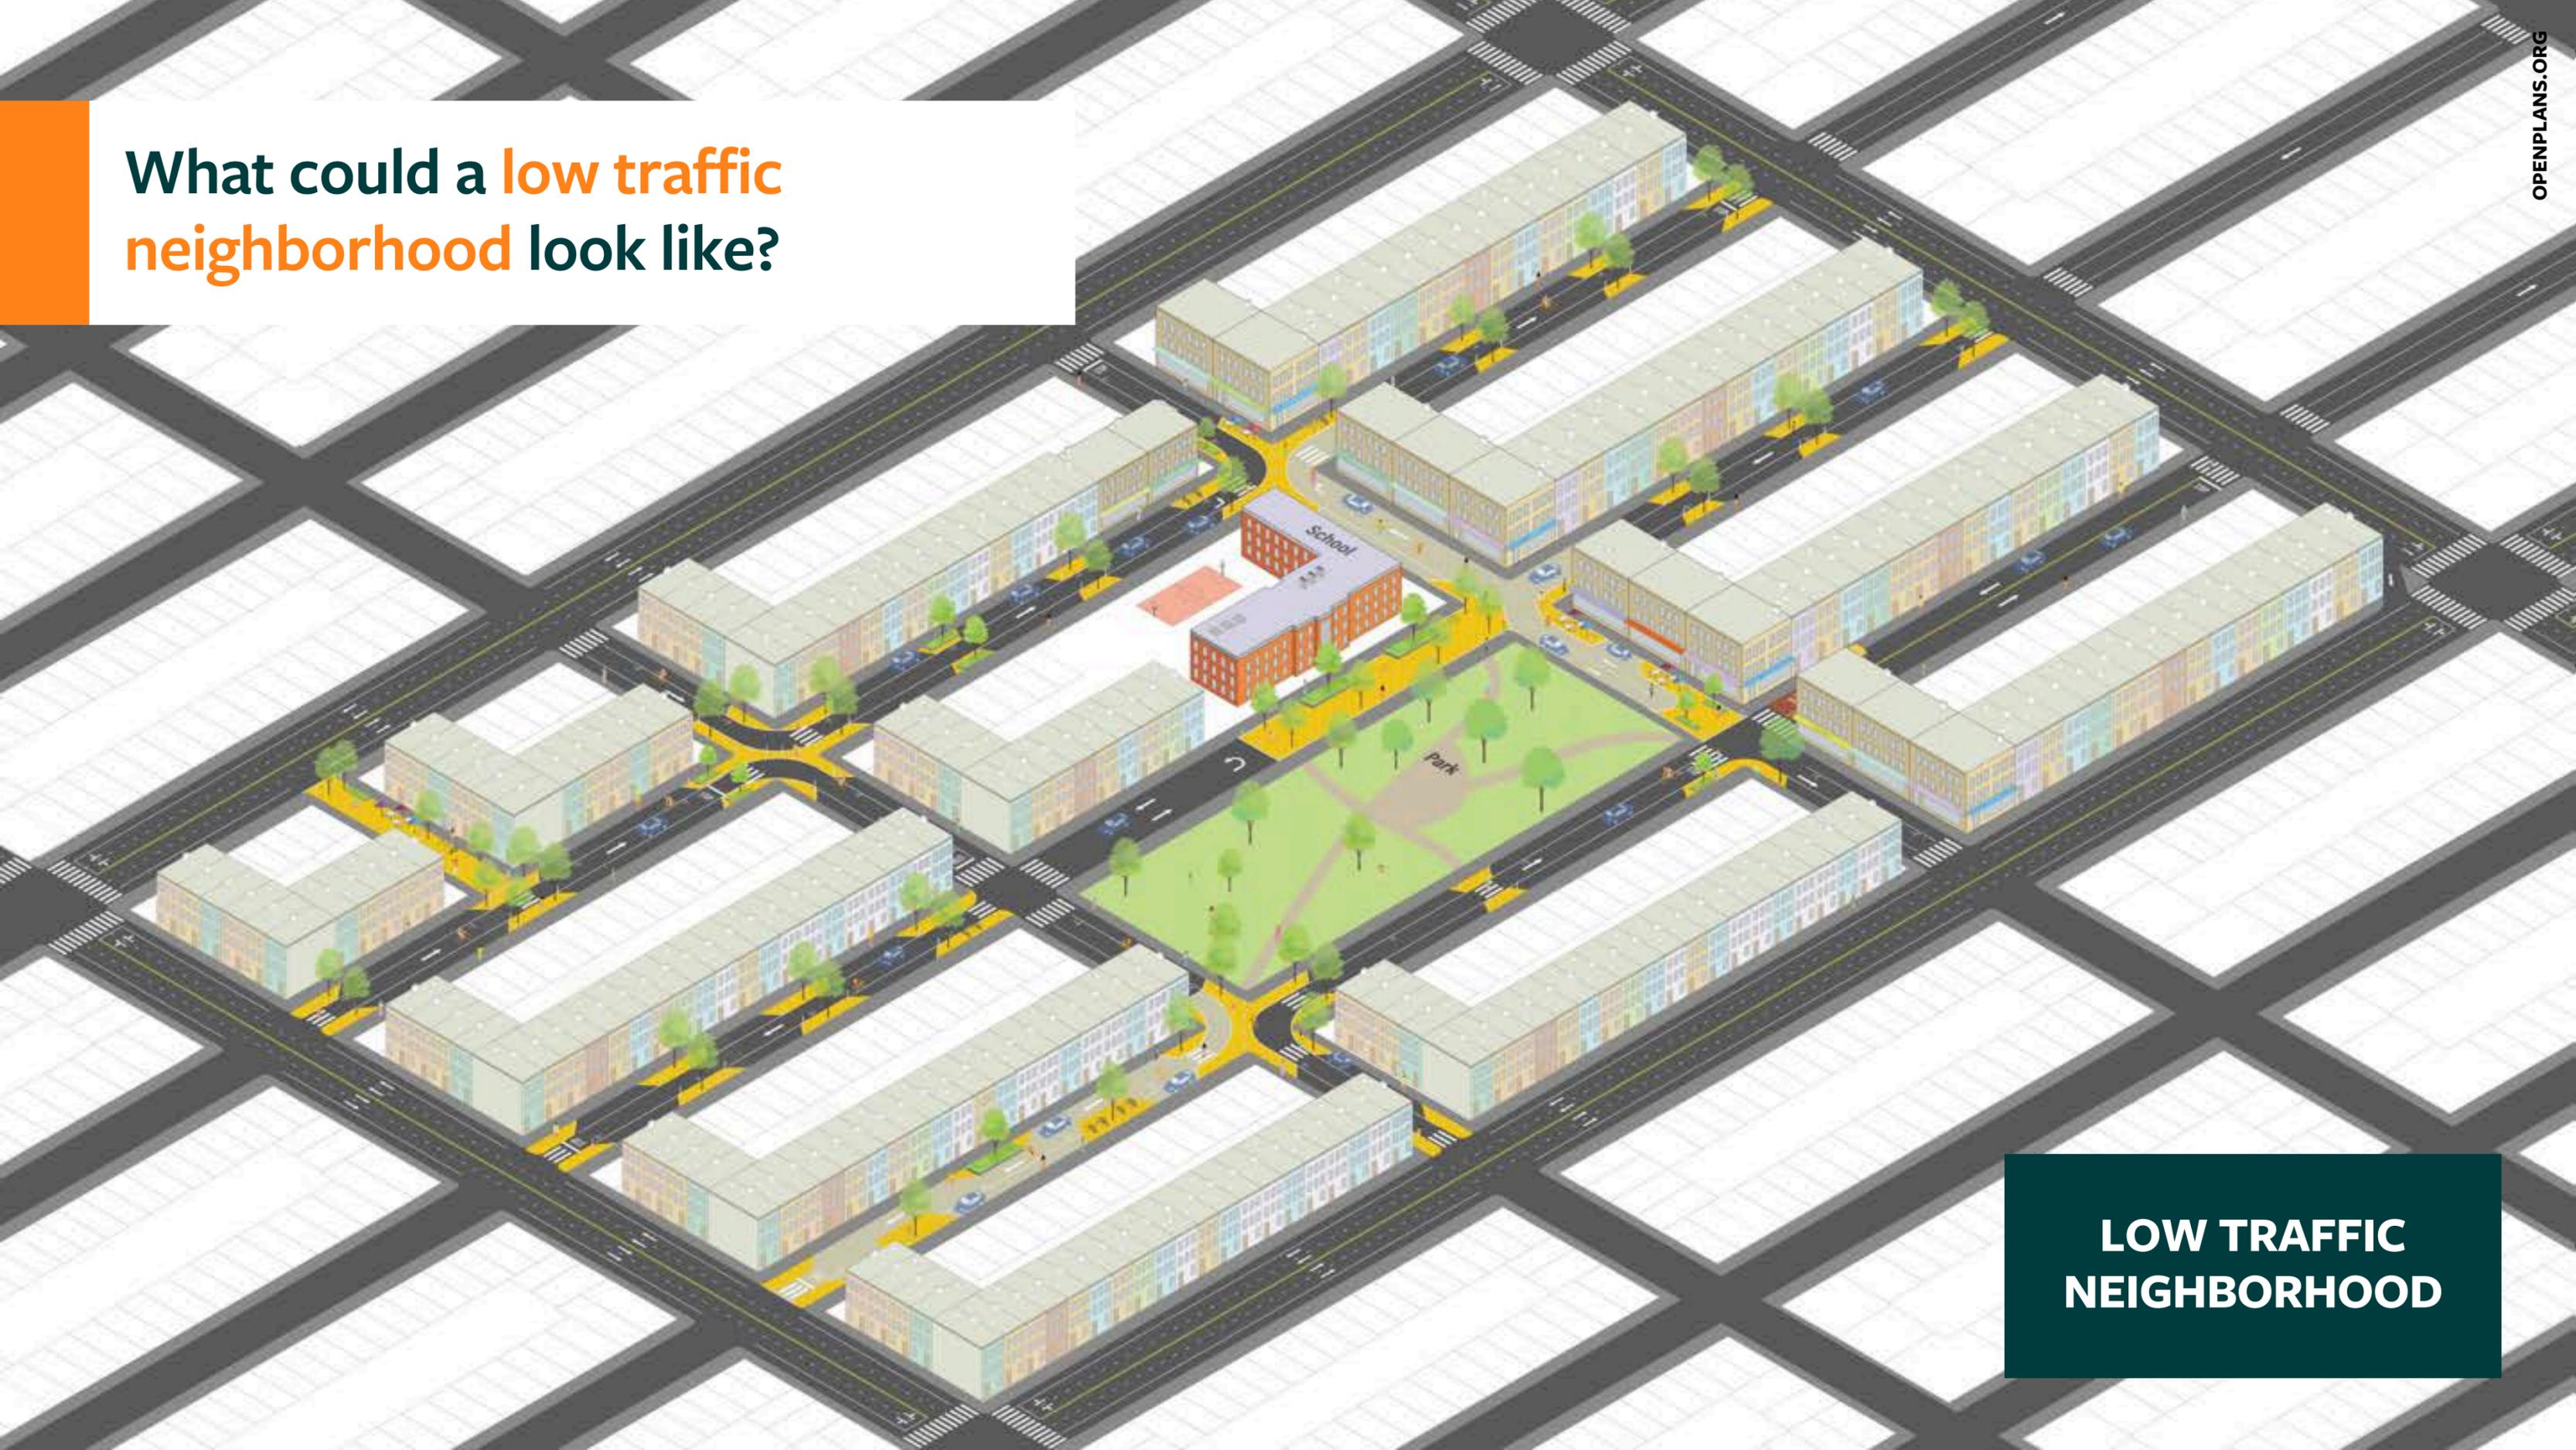

What would a **low traffic neighborhood** look like?

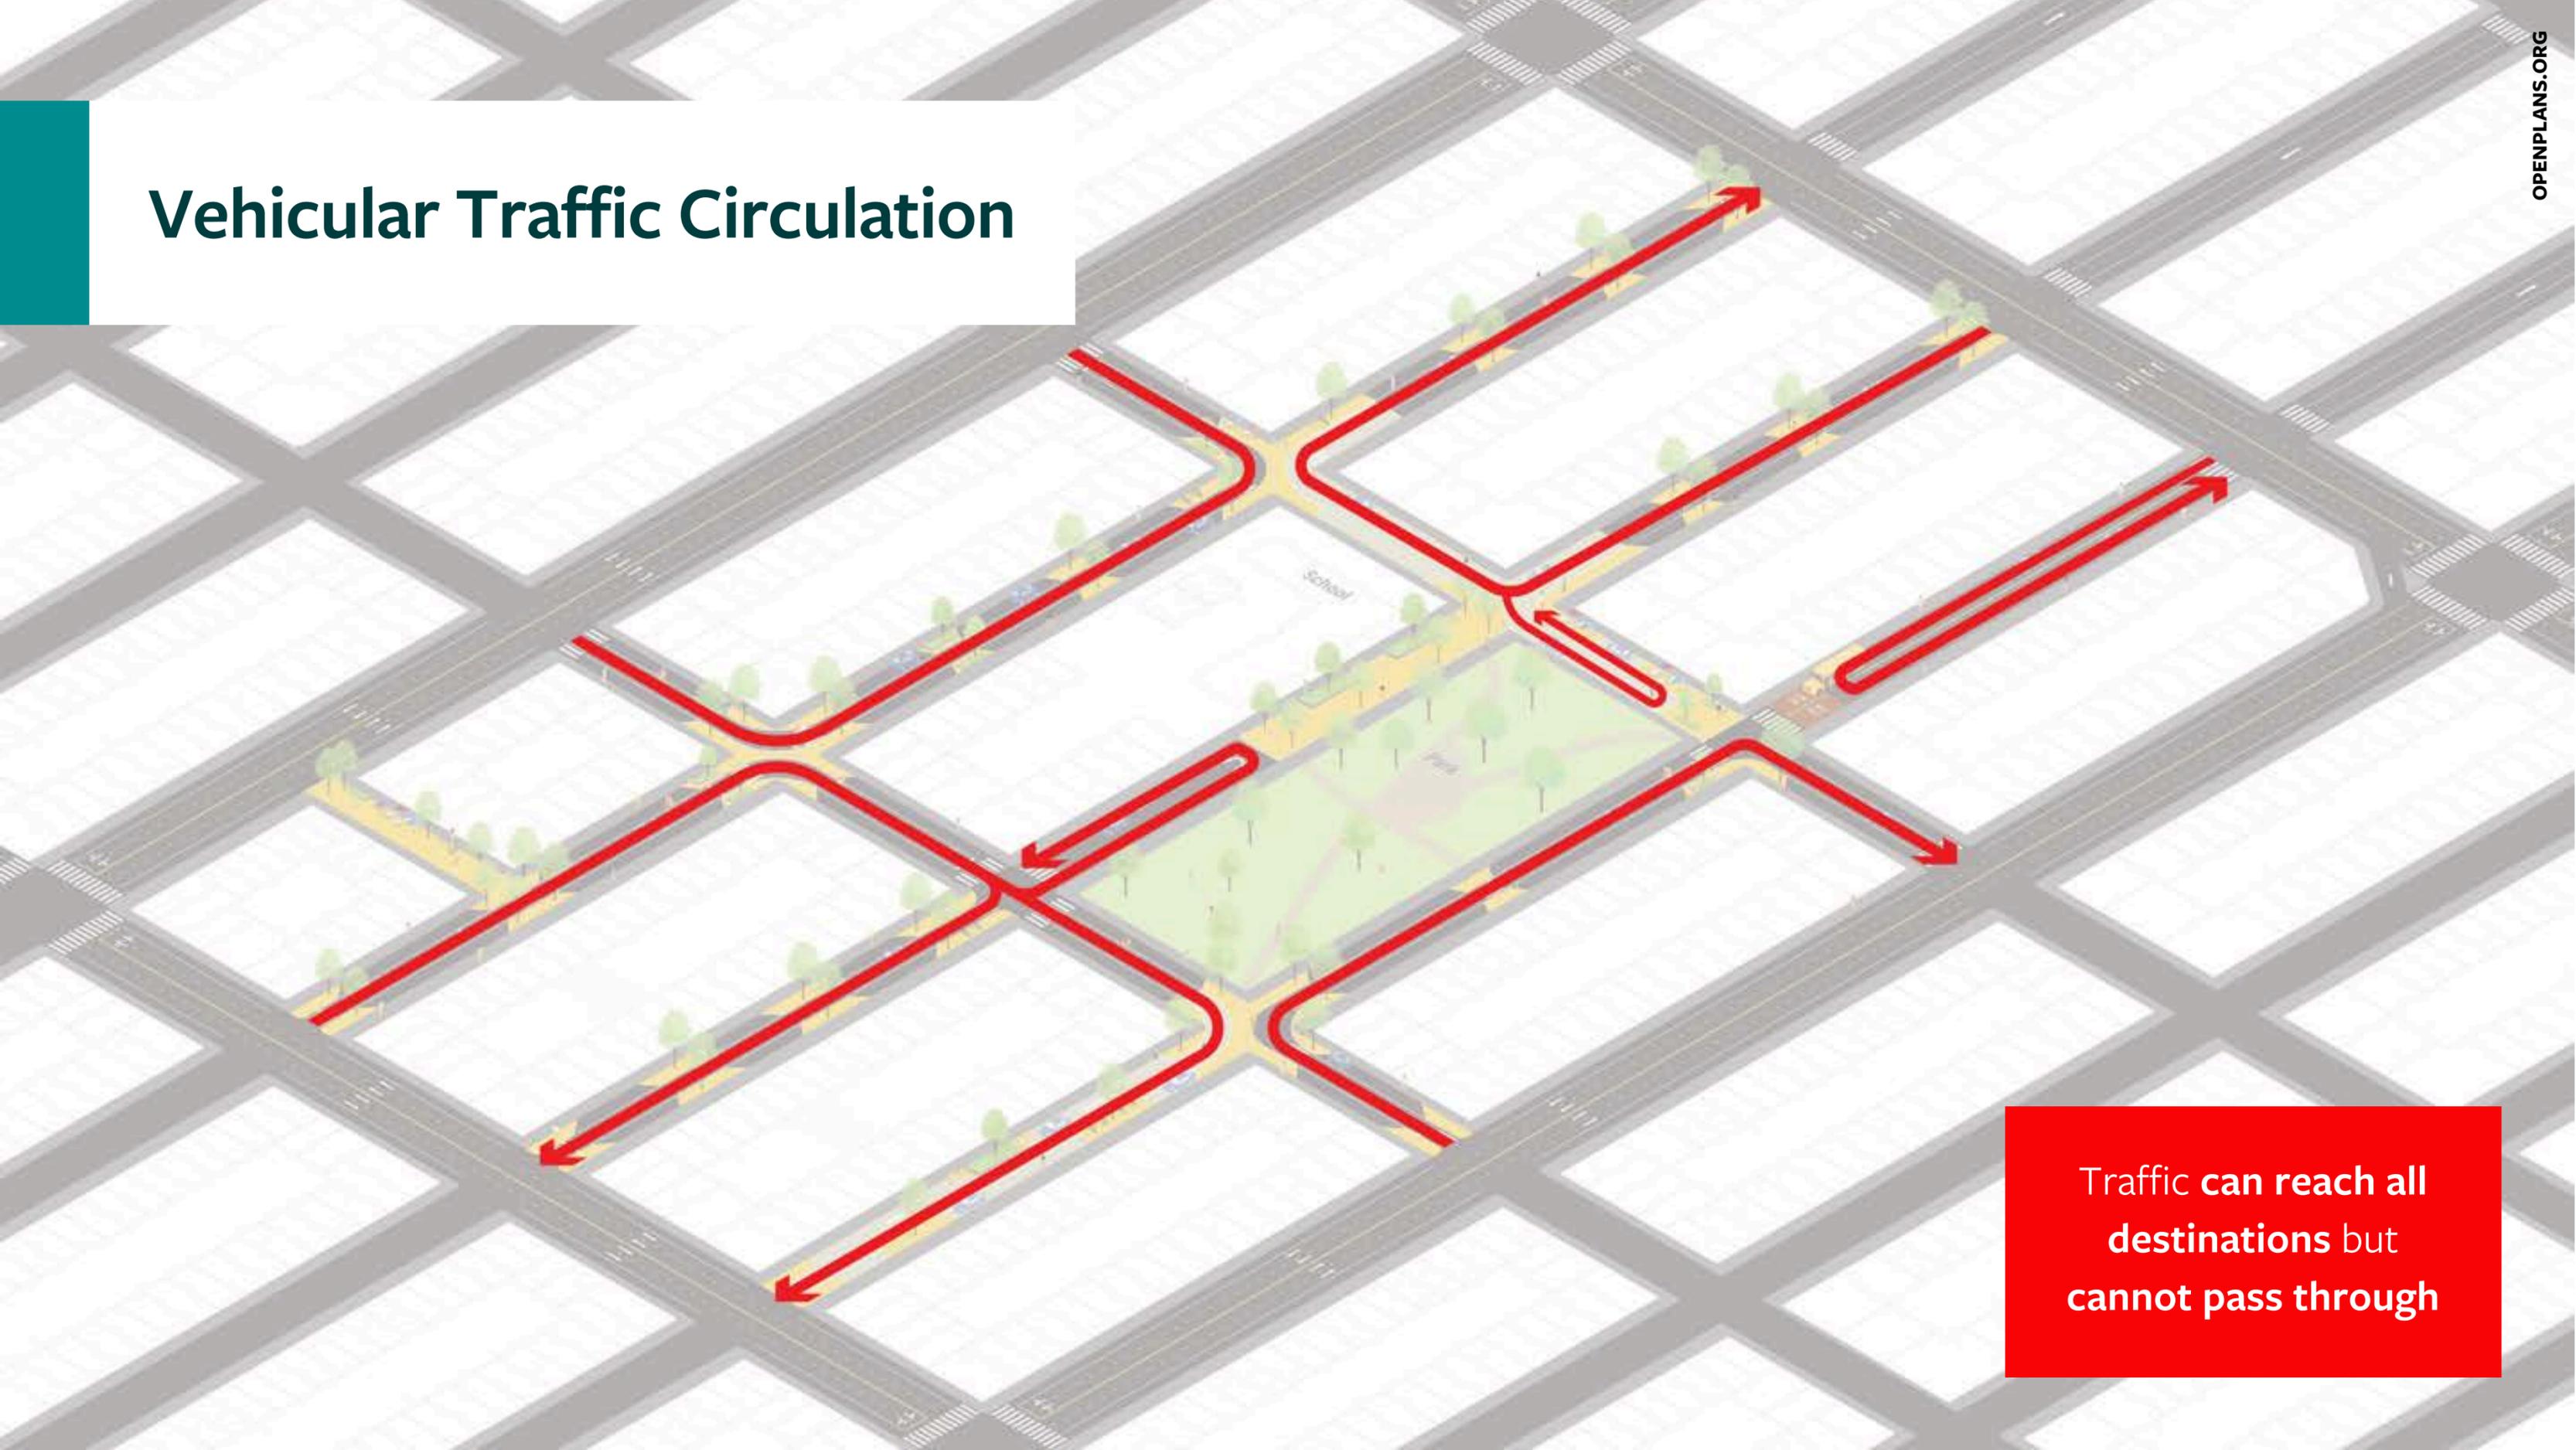

EXISTING

What could a **low traffic neighborhood** look like?

**LOW TRAFFIC
NEIGHBORHOOD**

Vehicular Traffic Circulation

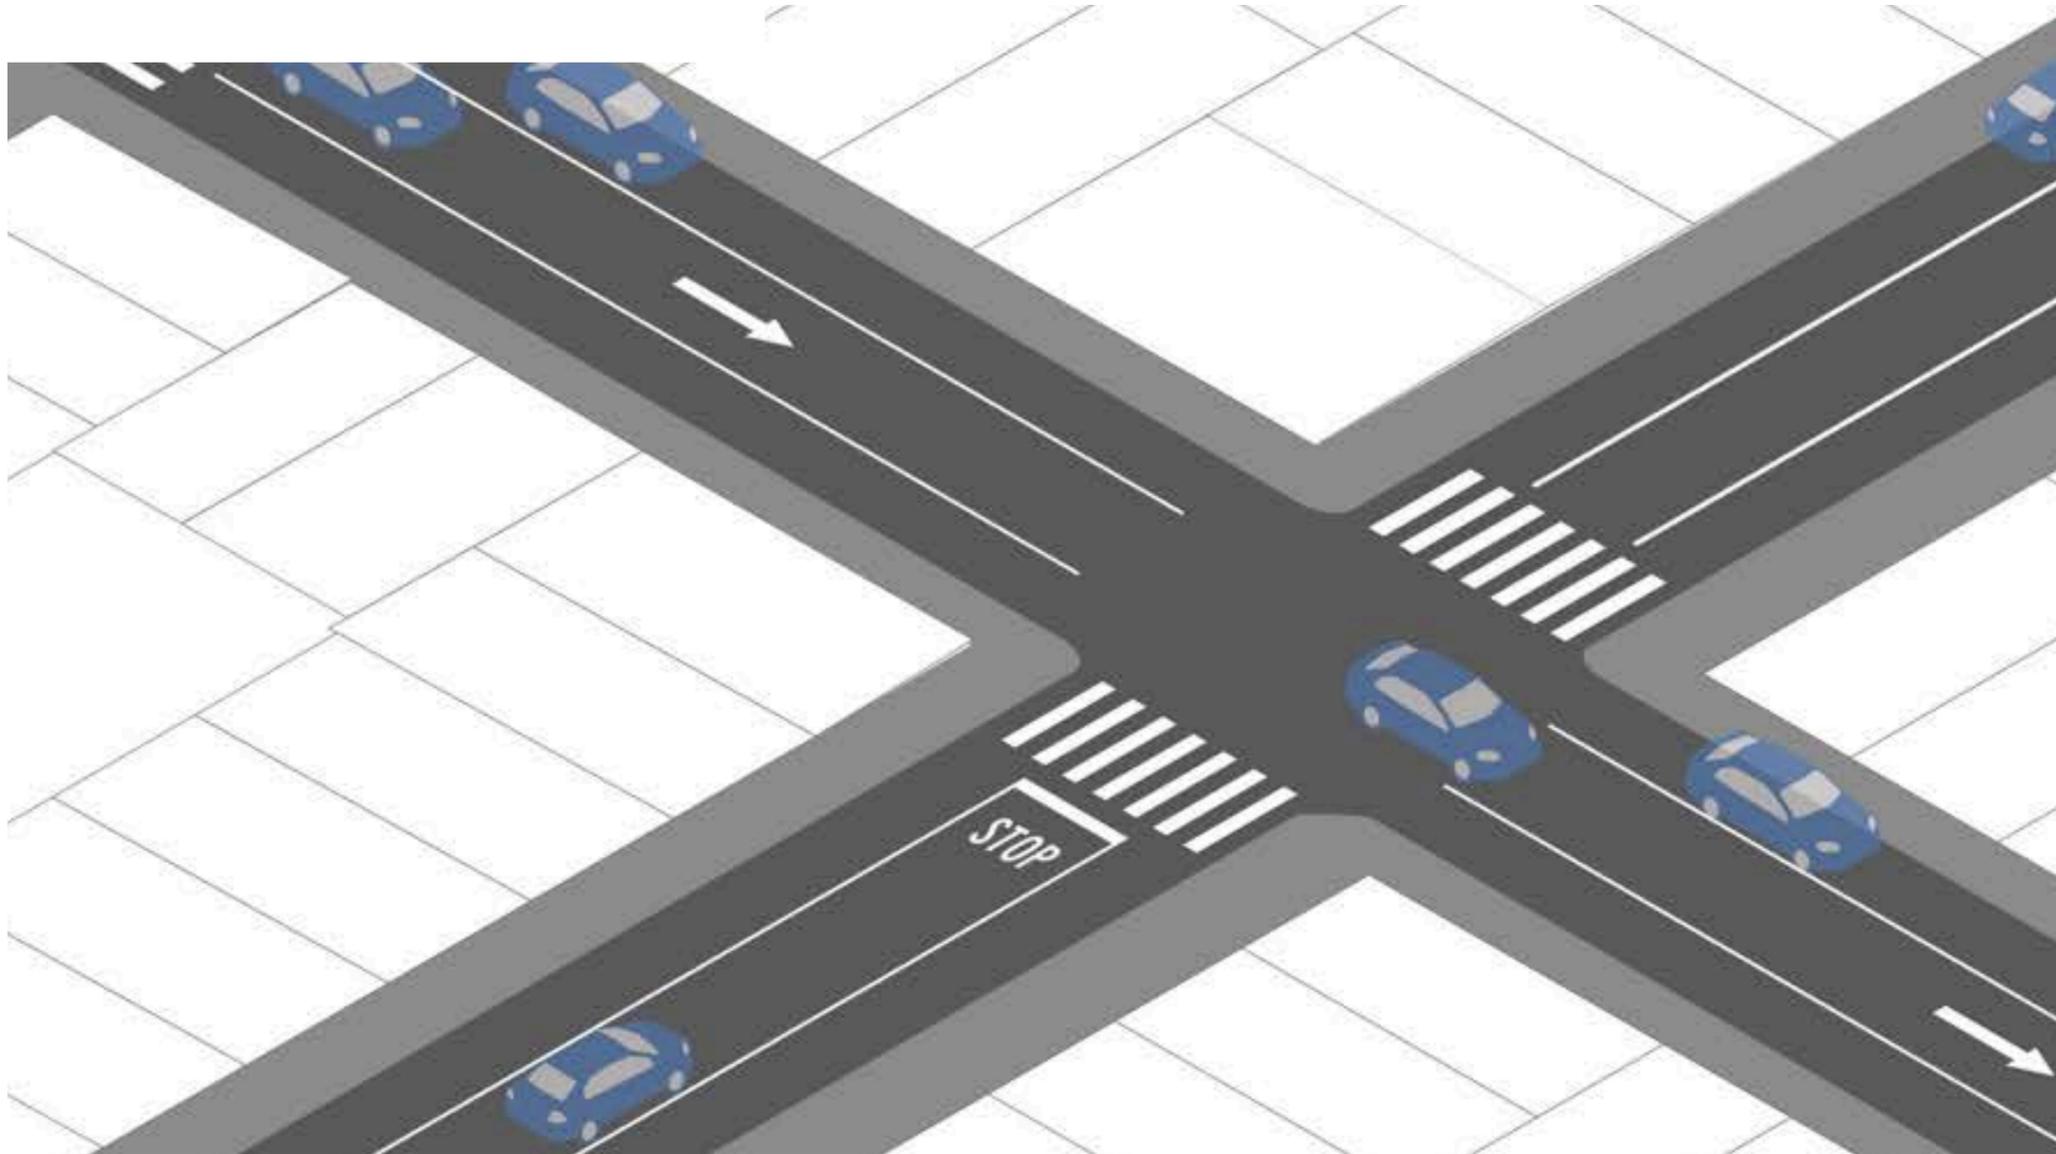

Traffic can reach all destinations but cannot pass through

Bikes and Pedestrians

Bikes and pedestrians have **full access**

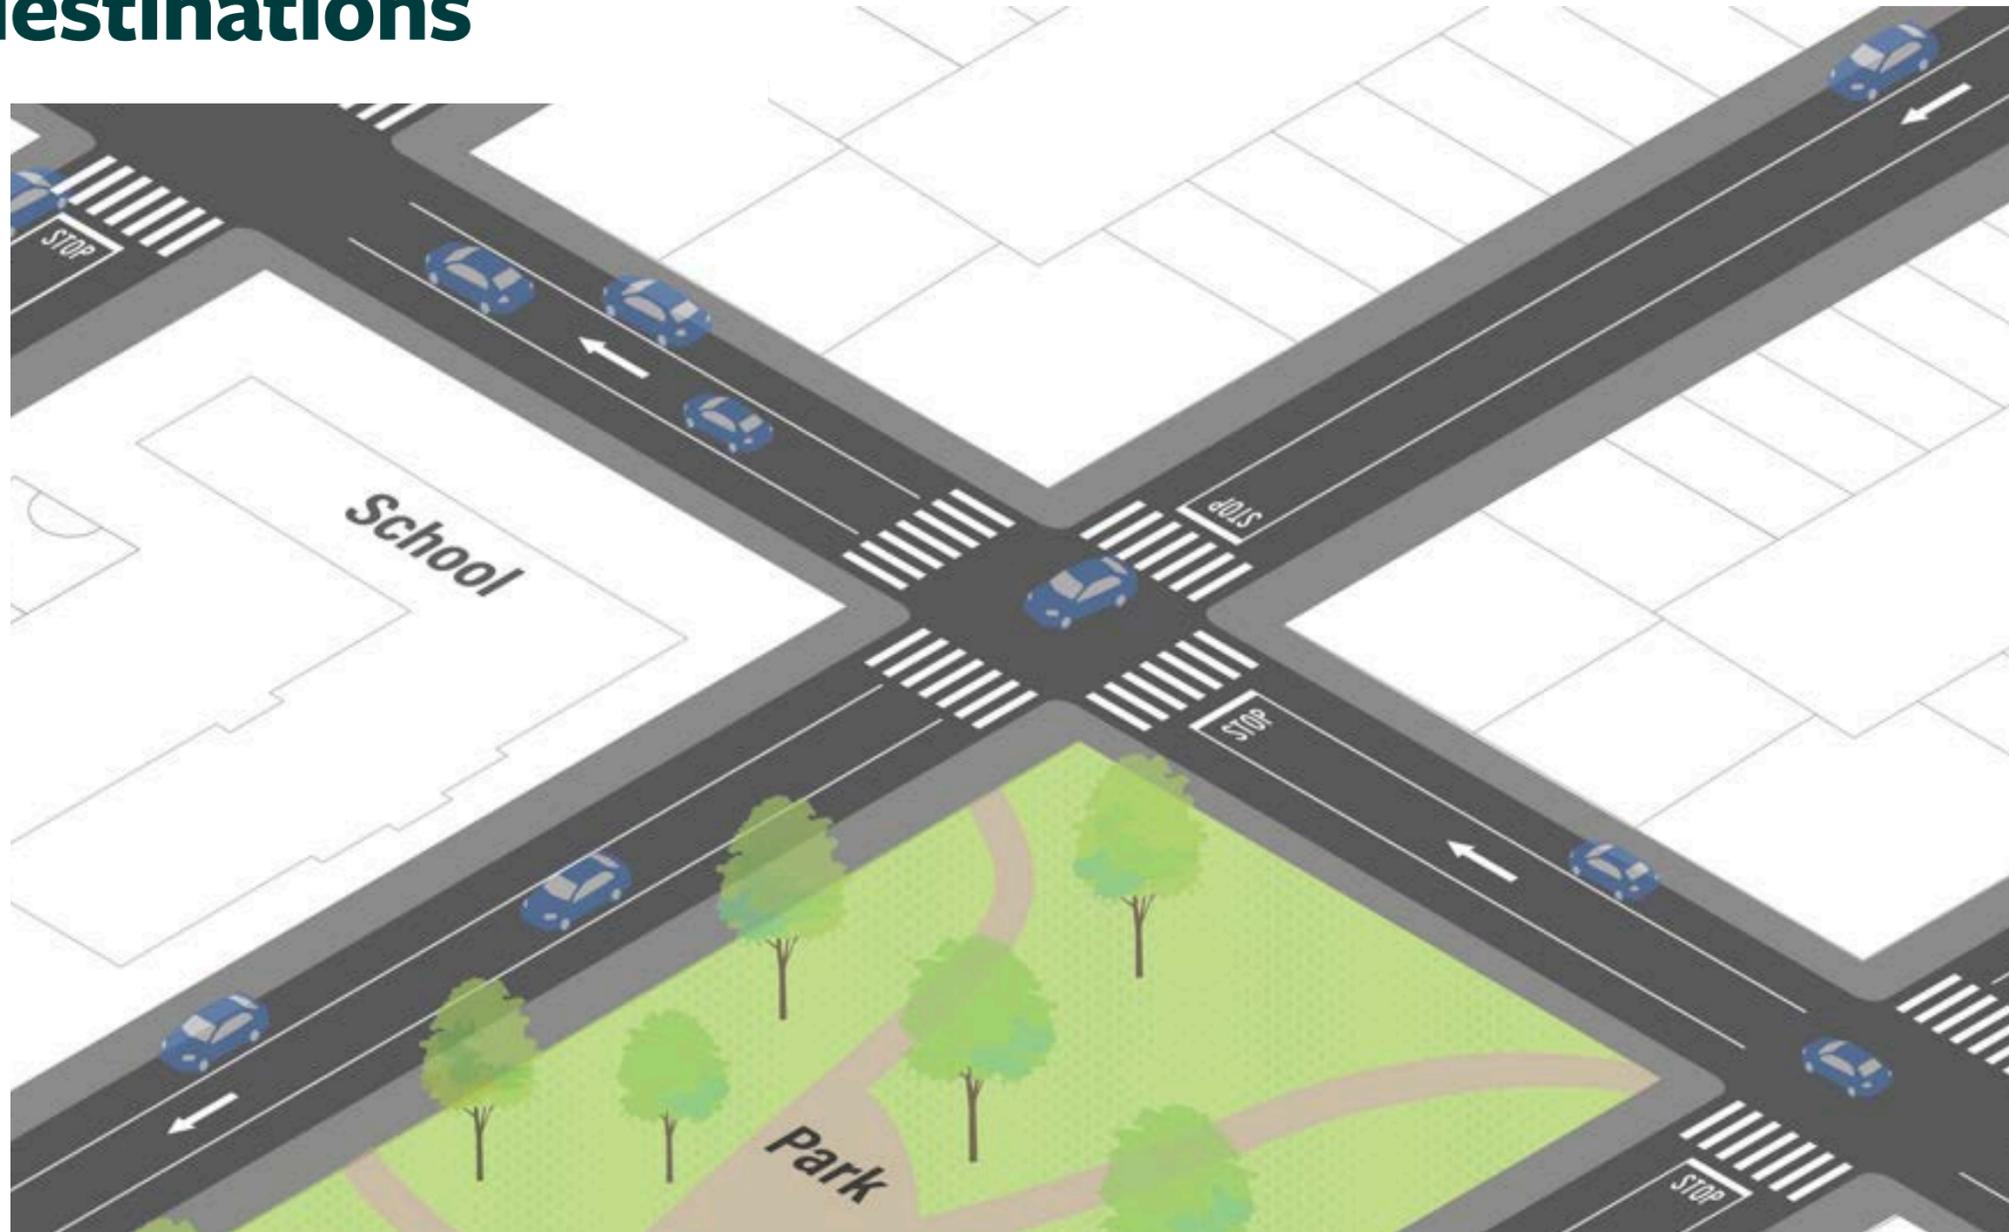

Diagonal diverters

Diagonal diverters

Plaza blocks near key destinations

Plaza blocks near key destinations

Shared Space Streets

Shared Space Streets

This neighborhood approach is gaining ground **worldwide**

📍 BERLIN, GERMANY

📍 PORTLAND, OREGON

📍 LONDON, UNITED KINGDOM

📍 LONDON, UNITED KINGDOM

📍 LONDON, UNITED KINGDOM

📍 BOGOTÁ, COLOMBIA

📍 BARCELONA, SPAIN

📍 QUEENS, NEW YORK

📍 LONDON, UNITED KINGDOM

Benefits for the neighborhood

01

Through driving is redirected as cars move to perimeter roads for necessary car trips.²

↓ **46.9%**

reduction in traffic volume

Traffic on **boundary roads** stayed **largely consistent**, with a slight average decrease of

↓ **1.6%**

02

They make streets safer, by **reducing crime**³ and **slowing down cars**⁴ in residential neighborhoods.

↓ **50%**

reduction in car-related casualties

In LTNs, there is a **10-18% reduction in crime**

Benefits for the neighborhood

03

Air quality is improved with less emissions in the neighborhood.⁴

concentration of nitrogen dioxide fell

↓ **5.7%**
within LTNs

↓ **9%**
on boundary roads

04

Boosts active travel, leading to **health benefits** that include increased life expectancy, reduced mortality, and fewer sick days.⁵

+ **25%**
more active travel

🛡️ increases life expectancy by 200 days

🛡️ **In London:** prevented 37 deaths and half a million sick days annually

LTNs are **self-enforcing** and don't require programming or other daily maintenance (like moving barricades)

01

Extra space is allocated to **the community**: trees can be planted, public seating areas or playgrounds can be added

With lower traffic volumes and speeds, LTN streets **naturally integrate into the bike network without needing further investment** and separate infrastructure.

LTNs are **inexpensive to implement** and over time, saves the city a lot of money with the health benefits.

LTNs are **self-enforcing** and don't require programming or other daily maintenance (like moving barricades)

Extra space is allocated to **the community**: trees can be planted, public seating areas or playgrounds can be added

02

With lower traffic volumes and speeds, LTN streets **naturally integrate into the bike network** without needing further investment and separate infrastructure.

LTNs are **inexpensive to implement** and over time, saves the city a lot of money with the health benefits.

6

LTNs are **self-enforcing** and don't require programming or other daily maintenance (like moving barricades)

Extra space is allocated to **the community**: trees can be planted, public seating areas or playgrounds can be added

With lower traffic volumes and speeds, LTN streets **naturally integrate into the bike network without needing further investment** and separate infrastructure.

03

LTNs are **inexpensive to implement** and over time, saves the city a lot of money with the health benefits.

Extra space is allocated to the **community**: trees can be planted, public seating areas or playgrounds can be added

With lower traffic volumes and speeds, LTN streets **naturally integrate into the bike network without needing further investment** and separate infrastructure.

LTNs are **inexpensive to implement** and over time, saves the city a lot of money with the health benefits.⁶

What LTNs are **NOT**

LTNs are NOT pedestrianization

Unlike Open Streets, LTNs are self-enforcing and don't require programming or other daily maintenance (like moving barricades).

📍 LONDON, UNITED KINGDOM

Do not require removing parking

Do not prohibit vehicle access

Do not reduce emergency response times

What LTNs are **NOT**

Not pedestrianization

LTNs do NOT require removing parking

Additional improvements can be made by removing parking, but an LTN can be created without removing any parking.

BOGOTÁ, COLOMBIA

Do not prohibit vehicle access

Do not reduce emergency response times

What LTNs are **NOT**

Not pedestrianization

Do not require removing parking

LTNs do NOT prohibit vehicle access

LTNs maintain full access for all essential vehicles including emergency services, garbage trucks, deliveries, and local traffic

7

Do not reduce emergency response times

What LTNs are **NOT**

Not pedestrianization

Do not require removing parking

Do not prohibit vehicle access

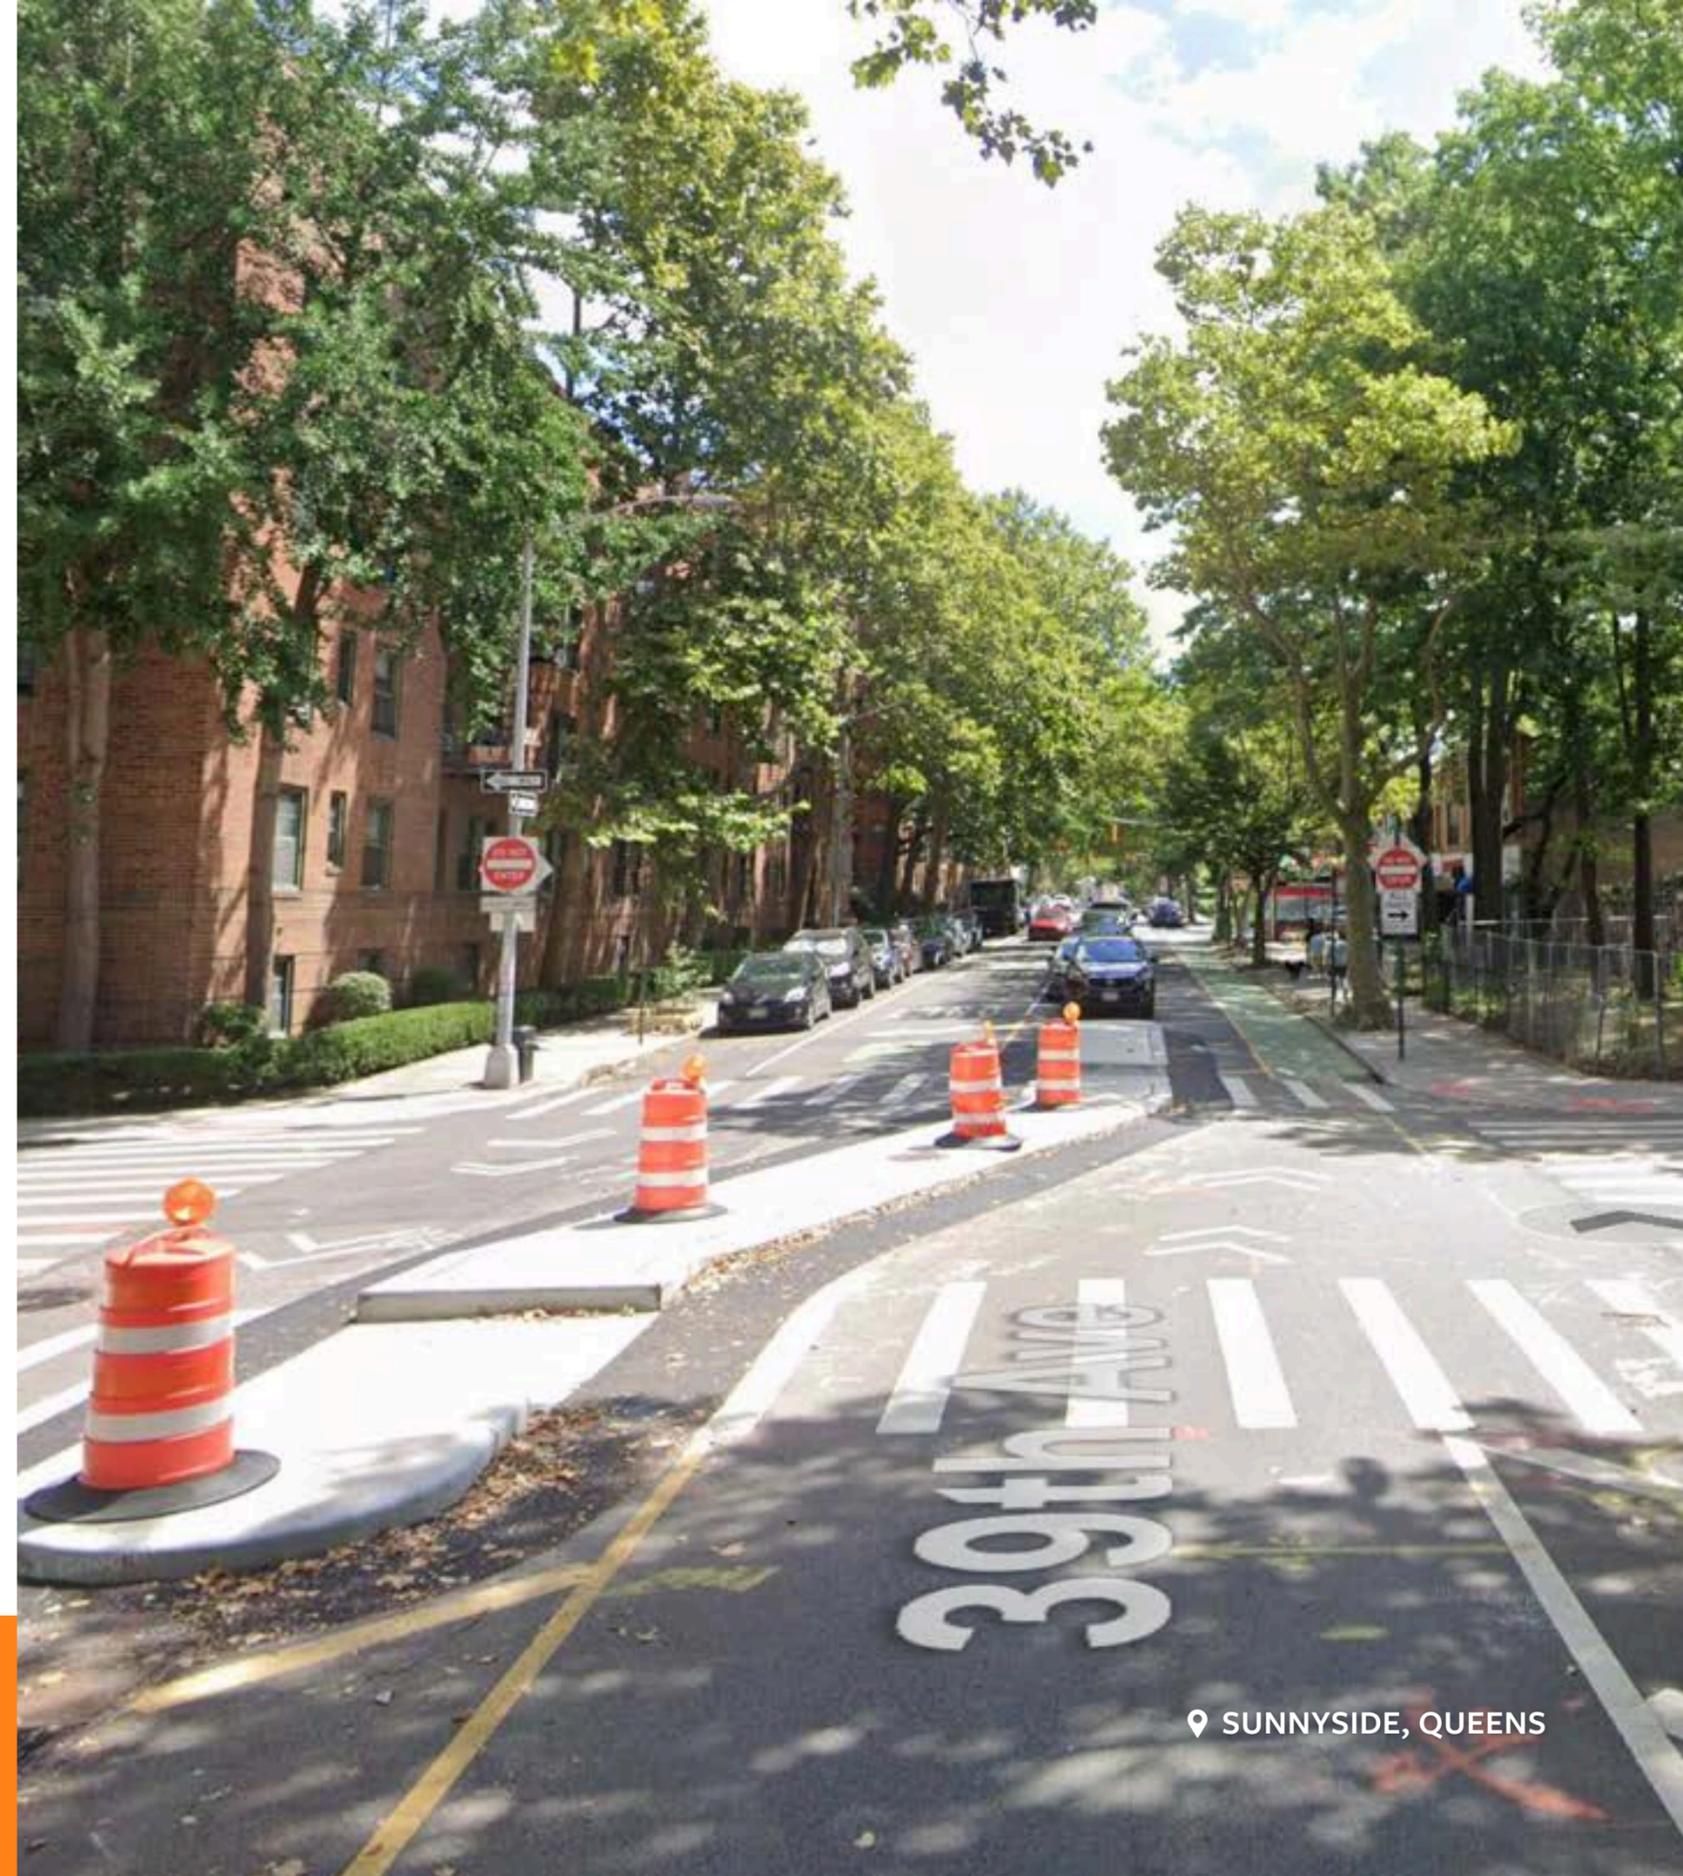

LTNs do NOT reduce emergency response times

According to several studies in London, because LTN's reduce traffic, emergency vehicles are able to more easily access their destination without the obstruction of obstacles like double parked vehicles or congestion.

What about New York City?

NYC already applies these elements successfully in various neighborhoods

NYC's current toolbox includes...

Pedestrian Friendly Spaces

1

📍 PASEO PARK IN JACKSON HEIGHTS, QUEENS

📍 39TH AVENUE BIKE BOULEVARD IN QUEENS

Bike Boulevards

2

📍 SLOW ZONE IN CLAREMONT, THE BRONX

Slow Streets

3

Redirecting flow

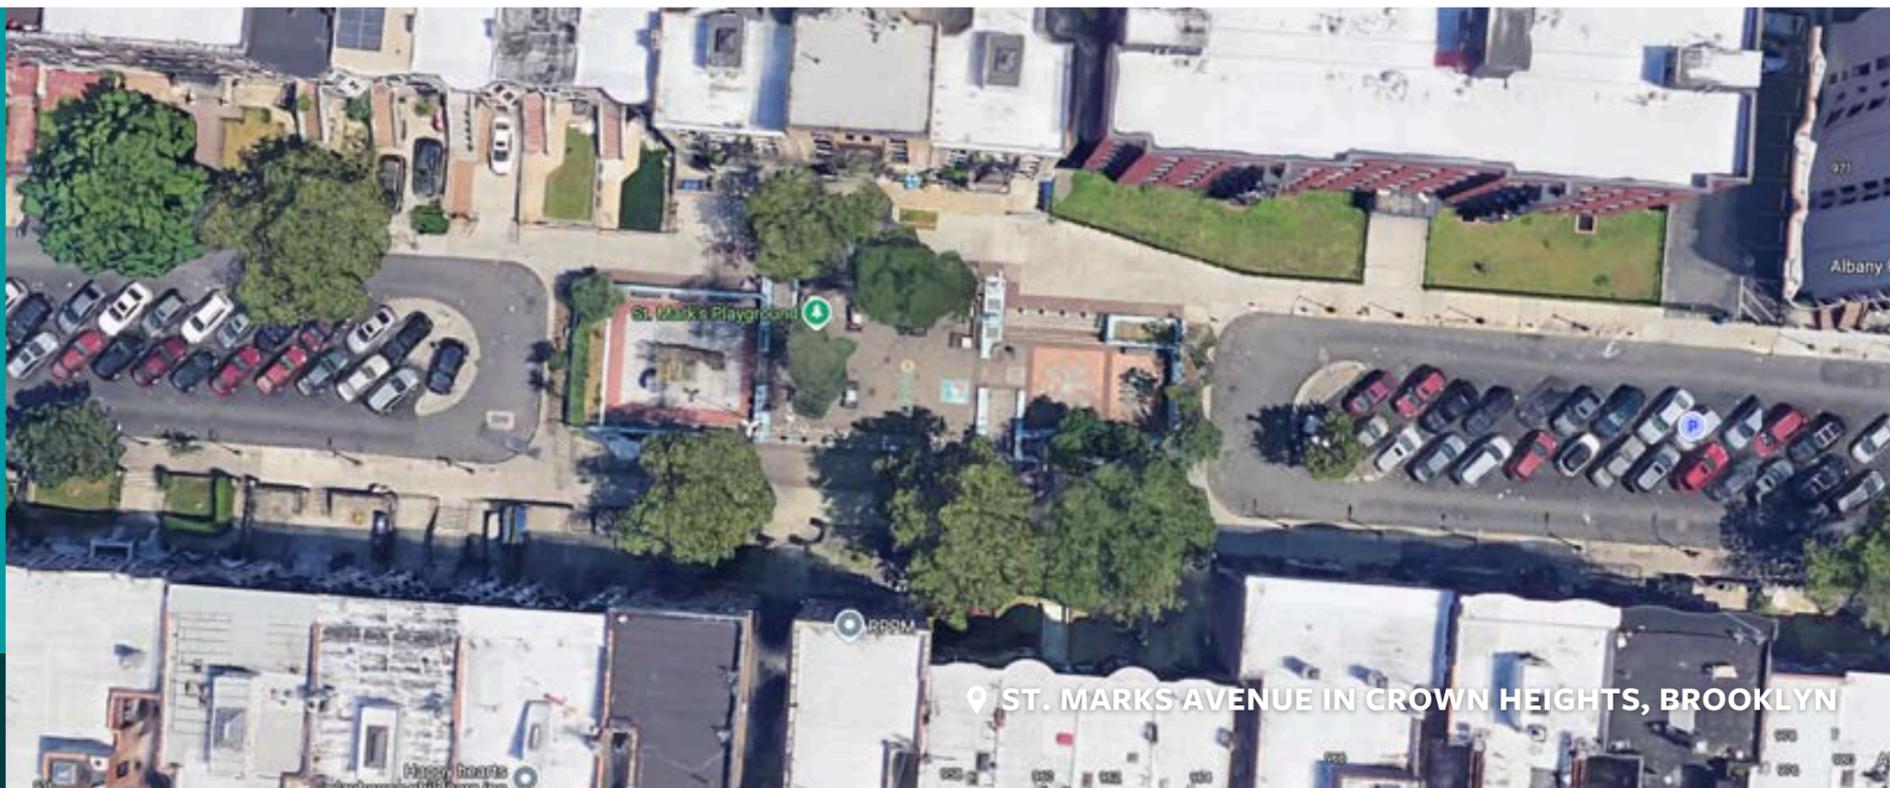

4

📍 BOND ST / LIVINGSTON IN BROOKLYN

Diverter

5

📍 ST. MARKS AVENUE IN CROWN HEIGHTS, BROOKLYN

Chicanes

6

📍 71ST AVENUE IN QUEENS

Contraflow Bike Lanes

7

📍 TECH PL / ADAMS ST IN BROOKLYN

LTNs bring all these together in one area to amplify their collective impact.

areas with
safety issues

areas with speeding and
evident cut-through driving

DISCUSSION

How could your
neighborhood **benefit from**
an LTN treatment?

community centers, schools,
parks that should have
slower quieter streets

Thank you!

If you have any questions, or need further information, please let us know!

Acknowledgments

We would like to thank our interviewees for generously sharing their expertise and time with us. Each conversation introduced new ideas and concepts, many of which we have shared in this presentation.

We would like to thank our 2024 summer intern, Emily Padilla-Chicas who did so much of the initial research and outreach to experts on Low Traffic Neighborhoods.

We would also like to thank Solomon Green-Eames for his expertise, creativity, and inspiration as he created the illustrations and applied examples presented in this document.

Interviewees

Sam Balto

Founder of the Bike Bus movement in USA

Physical Education Teacher at a local public school in Portland, Oregon

Giulio Ferrini

Head of Built Environment at Institute for Human Rights & Business

Previously designed and implemented LTNs in London

Sílvia Casorrán Martos

Former Deputy Chief Architect at Barcelona City Council

Rachel Aldred

Professor at the University of Westminster, England

Ragnhild Sørensen

Head of Communication at Changing Cities, Berlin

Ebru Gencer

Adjunct Associate Professor at GSAPP at Columbia University

Florian Lorenz and Georg Wieser

Designers and Architects co-founders of LAUT Studio which implemented Superblocks in Vienna
